ALL PAVEMENT MARKINGS SHALL BE IN ACCORDANCE WITH THE TEXAS MUTCD.

THE LOCATION OF UTILITIES, EITHER UNDERGROUND OR OVERHEAD, SHOWN WITHIN THE RIGHT OF WAY ARE APPROXIMATE AND SHALL BE VERIFIED BY THE CONTRACTOR BEFORE BEGINNING CONSTRUCTION OPERATIONS.

THE FOLLOWING LIST OF SOME OF THE TELEPHONE NUMBERS OF THE UTILITY LOCATORS FOR VARIOUS UTILITIES THAT MAY BE ENCOUNTERED.

GENERAL NOTES AND SPECIFICATION DATA--

IN ACCORDANCE WITH THE UNDERGROUND FACILITY DAMAGE PREVENTION ACT (ONE CALL BILL) THE PHONE NUMBER FOR A UTILITY LOCATOR IS 1-800-545-6005. IT IS THE CONTRACTOR RESPONSIBLITY TO MAKE ARRANGEMENTS FOR UTILITY LOCATORS AS NEEDED.

MOST EXISTING NATURAL GAS PIPELINES THAT WILL NO LONGER BE IN SERVICE ARE USUALLY ABANDONED-IN-PLACE. HOWEVER, THE FOLLOWING PROCEDURE SHALL BE USED WHENEVER AN EXISTING WRAPPED STEEL GAS PIPE HAS TO BE REMOVED (FOR WHATEVER REASON) DURING CONSTRUCTION OPERATIONS.

1. THE CONTRACTOR SHALL NOTIFY THE ENGINEER THAT THIS ACTIVITY IS GOING TO TAKE PLACE.

2. AS SOON AS THE PIPE IS REMOVED, THE CONTRACTOR SHALL COVER AND SECURE THE ENDS OF THE PIPE WITH A DOUBLE LAYER OF 6 MIL PLASTIC, THEN MOVE IT TO A SECURE STORAGE SITE WITHIN THE PROJECT LIMITS. CARE SHALL BE TAKEN TO AVOID DAMAGE TO THE PLASTIC AND IF DAMAGED, SHALL BE REPLACED BEFORE FURTHER HANDLING OF THE PIPE. IF THE WRAPPING IS DAMAGED, THE ENTIRE PIPE SHALL BE COVERED WITH PLASTIC.

3. THE ENGINEER WILL DETERMINE THE OWNER (UTILITY COMPANY) OF THE GAS LINE. IF IT BELONGS TO CITY PUBLIC SERVICE (CPS), THE ENGINEER WILL CONTACT CPS TO COORDINATE REMOVAL OF THE PIPE FROM THE PROJECT. THE CONTRACTOR WILL LOAD THE PIPE ONTO A CPS VEHICLE FOR CPS TO TRANSPORT THE PIPE TO THEIR MATERIAL RECOVERY AND DISPOSITION FACILITY. IF THE OWNER OF THE GAS PIPE CANNOT BE DETERMINED, THE STATE WILL MAKE ARRANGEMENTS TO TRANSPORT THE PIPE OFF THE PROJECT. THE CONTRACTOR WILL NOT BE RESPONSIBLE FOR DISPOSAL OF THE PIPE.

4. THE REMOVAL OF THE STEEL GAS PIPE FROM THE TRENCH IS SUBSIDIARY TO THE WORK THAT CREATED THE NEED TO REMOVE THE PIPE (STRUCTRURAL EXCAVATION, ROADWAY EXCAVATION, REMOVAL AND REPLACEMENT OF THE PIPE, ETC). THE WORK PERFORMED IN HANDLING THE PIPE AFTER IT HAS BEEN REMOVED (COVERING WITH PLASTIC, HAULING TO A SECURE STORAGE, AND LOADING ONTO THE GAS COMPANY'S TRANSPORTATION VEHICLE FOR FINAL REMOVAL) WILL BE PAID FOR THROUGH THE EXTRA WORK ORDER PROCESS.

THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONTACTING THE TXDOT OR CITY OF SAN ANTONIO SIGNAL OPERATIONS OFFICE AT 210-615-5975 (TXDOT) OR 210-207-7765 (CITY) WHEN CONSTRUCTION OPERATIONS ARE WITHIN 120 M OF A SIGNALIZED INTERSECTION TO DETERMINE/VERIFY THE LOCATION OF LOOP DETECTORS, CONDUIT, GROUND-BOXES, ETC. ANY SIGNAL EQUIPMENT DAMAGED BY

GENERAL NOTES AND SPECIFICATION DATA--

THE CONTRACTOR'S OPERATIONS SHALL BE REPAIRED OR REPLACED BY THE CONTRACTOR AT THEIR EXPENSE. THE METHOD OF REPAIR OR REPLACEMENT SHALL BE PRE-APPROVED AND INSPECTED BY THE ENGINEER. DEPENDING ON THE TYPE AND EXTENT OF THE DAMAGE, THE STATE RESERVES THE RIGHT TO PERFORM THE REPAIR OR REPLACEMENT WORK WITH STATE OR CITY FORCES AND THE CONTRACTOR WILL BE BILLED FOR THE COST OF THIS WORK.

ALL EXISTING RAISED PAVEMENT MARKINGS SHALL BE REMOVED BY THE CONTRACTOR AS THE WORK PROGRESSES AS APPROVED BY THE ENGINEER. THIS WORK WILL NOT BE PAID FOR SEPARATELY BUT SHALL BE CONSIDERED SUBSIDIARY TO THE VARIOUS BID ITEMS. MATERIALS REMOVED SHALL BECOME THE PROPERTY OF THE CONTRACTOR FOR PROPER DISPOSAL.

MATERIALS LARGER THAN 100 MM IN SIZE WITHIN THE CONSTRUCTION LIMITS AND NOT INCORPORATED INTO THE ROADWAY CONSTRUCTION SHALL BE REMOVED FROM THE RIGHT OF WAY AND DISPOSED OF IN A PROPER MANNER ACCEPTABLE TO THE ENGINEER AT THE EXPENSE OF THE CONTRACTOR.

IN INSTANCES WHERE FIXED FEATURES REQUIRE, THE CROSS SECTION SLOPES MAY BE VARIED TO THE EXTENT DETERMINED/APPROVED BY THE ENGINEER.

IF WASTE AREAS OR MATERIAL SOURCE AREAS RESULT FROM THIS PROJECT, THE CONTRACTOR IS REMINDED TO FOLLOW THE REQUIREMENTS OF THE TEXAS AGGREGATE QUARRY AND PIT SAFETY ACT. IN ADDITION, IT IS REQUESTED THAT THESE AREAS NOT BE VISIBLE FROM ANY HIGHWAY ON THE STATE SYSTEM.

THE CONTRACTOR SHALL MAINTAIN THE RIGHT OF WAY IN A SATISFACTORY APPEARANCE AS SHOWN IN THE PLANS AND/OR AS DETERMINED/APPROVED BY THE ENGINEER.

ANY MATERIALS REMOVED AND NOT REUSED AND DETERMINED TO BE SALVAGEABLE BY THE ENGINEER, SHALL BE RETAINED BY THE OWNER AND SHALL BE STORED WITHIN THE PROJECT LIMITS IN A SECURE LOCATION OR DELIVERED UNDAMAGED TO THE SALVAGE/STORAGE YARD AS DIRECTED BY THE ENGINEER. MATERIALS THAT ARE NOT DETERMINED TO BE SALVAGABLE BY THE ENGINEER SHALL BECOME THE PROPERTY OF THE CONTRACTOR FOR PROPER DISPOSAL AT THEIR EXPENSE. SIGNS MUST BE DEFACED AND DISPOSED OF IN SUCH A MANNER THAT THEY WILL NOT REAPPEAR IN PUBLIC, AS A SIGN.

IN PREPARING HOLES FOR POSTS AND/OR FOUNDATIONS, CARE SHALL BE TAKEN SO AS NOT TO RUPTURE EXISTING DRAINAGE STRUCTURES, ELECTRICAL CONDUITS, PUBLIC UTILITIES, ETC.

ANY SIGN PANELS THAT ARE TO BE ADJUSTED AND/OR REMOVED AND REPLACED, SHALL BE DONE IN THE SAME WORKDAY UNLESS OTHERWISE APPROVED BY THE

ALL PLANTS SHALL BE TRUE TO SPECIES AND VARIETY AND SHALL CONFORM TO MEASUREMENTS AND CONDITIONS AS SPECIFIED, UNLESS OTHERWISE AGREED UPON BY THE ENGINEER.

PLANTS SHALL BE SUBJECT TO INSPECTIONS AND APPROVAL BY THE ENGINEER AT THE PLACE OF GROWTH AND UPON DELIVERY FOR CONFORMITY TO SPECIFICATIONS. SUCH APPROVAL SHALL NOT NEGATE THE RIGHT OF INSPECTION AND REJECTION DURING PROGRESS OF THE WORK. THE ENGINEER RESERVES THE RIGHT TO REFUSE INSPECTION AT ANY TIME IF, IN THE ENGINEER'S JUDGEMENT, A SUFFICIENT QUANTITY OF PLANTS IS NOT AVAILABLE FOR INSPECTION.

ALL PLANTS INSPECTED AT THE NURSERY BY THE ENGINEER SHALL BE TAGGED WITH SERIALIZED SELF-LOCKING TAGS. PLANTS DELIVERED TO THE SITE WITHOUT THESE TAGS OR WITH BROKEN TAGS MAY BE SUFFICIENT REASON FOR REJECTION. TAGS SHALL BE FURNISHED BY THE CONTRACTOR AT THE PRE-CONSTRUCTION CONFERENCE.

THE CONTRACTOR SHALL SUBMIT A WRITTEN PLAN TO THE ENGINEER FOR TRANSPORTING PLANT MATERIAL TO THE SITE FOR APPROVAL. SUCH A PLAN SHOULD INCLUDE DATE OF PICK-UP AT NURSERY OR PLACE OF STORAGE, TYPE OF VEHICLE USED FOR SHIPPING, METHOD OF PROTECTING PLANTS DURING TRANSIT, DATES IN TRANSIT, DATE OF DELIVERY TO SITE, PROJECTED DATE OF INSTALLATION, A MEANS AND LOCATION OF STORAGE, AND WATERING AND SHADING USED BETWEEN DELIVERY AND PLANTING; WHICH SHALL BE SUBJECT TO REVIEW BY THE ENGINEER. DO NOT STORE PLANT MATERIALS ON HARD PAVEMENT. IMMEDIATELY UNTIE MATERIAL UPON DELIVERY.

THE FOLLOWING CONSIDERATIONS FOR PRODUCT HANDLING BY THE CONTRACTOR SHALL BE EVALUATED DURING HOT WEATHER AND WHEN PRACTICAL. THE CONTRACTOR MAY BE REQUIRED TO TRANSPORT PLANT MATERIALS BETWEEN SUNSET AND SUNRISE IF TRANSPORTED IN AN OPEN TRAILER OR UNREFRIGERATED VAN. PROTECT TRUNKS, STEMS, BRANCHES AND ROOT BALLS FROM ALL DAMAGE DURING HANDLING, LOADING AND UNLOADING OPERATIONS. LOAD CONTAINERS ONTO TRANSPORT VEHICLE AND SECURE IN A MANNER THAT PROTECTS THE STRUCTURAL INTEGRITY OF TH EROOT BALLS AND BRANCHES. THE CONTRACTOR SHALL BE SOLELY RESPONSIBLE FOR THE SAFE TRANSPORTATION OF PLANTS TO THE SITE AND THEIR CONDITION UPON ARRIVAL. PLANTS DAMAGED, DEHYDRATED, OR ABUSED DURING TRANSIT AND STORAGE WILL BE REJECTED. PLANT MATERIALS SHALL NOT BE STORED ON CONCRETE OR ASPHALT, NOR SHALL THEIR CONTAINERS BE LEFT EXPOSED TO THE SUN. IF PLANTS ARE LEFT IN STORAGE OVER THE WEEKEND OR HOLIDAY, A MEANS OF PERIODICALLY WATERING AND INSPECTING CONTAINER MOISTURE SHALL BE PROVIDED.

THE ENGINEER MAY INSPECT ANY PHASE OF PRODUCT HANDLING AND MAY REJECT ANY PLANT MATERIAL IMPROPERLY HANDLED DURING ANY POINT OF THIS

OPERATION.

PLANTS SHALL BE NURSERY GROWN IN ACCORDANCE WITH GOOD HORTICULTURAL PRACTICES UNDER CLIMATIC CONDITIONS SIMILAR TO THOSE OF THE PROJECT SITE FOR AT LEAST 12 MONTHS, UNLESS SPECIFICALLY OTHERWISE AUTHORIZED BY THE ENGINEER IN WRITING. UNLESS SPECIFICALLY NOTED OTHERWISE, ALL PLANTS SHALL BE HEAVY, SYMMETRICAL, TIGHTLY KNIT, SO TRAINED OR FAVORED IN DEVELOPMENT AND APPEARANCE AS TO BE SUPERIOR IN FORM, NUMBER OF BRANCHES, COMPACTNESS AND SYMMETRY.

THE CONTRACTOR SHALL NOT WORK SUBSOIL FOR PLANTING OPERATIONS WHEN MOISTURE CONTENT IS SO GREAT THAT EXCESSIVE COMPACTION WILL OCCUR NOR WHEN IT IS SO DRY THAT THE CLODS WILL NOT BREAK READILY. WATER SHALL BE APPLIED, IF NECESSARY.

DO NOT BIND OR HANDLE ANY PLANT WITH WIRE OR ROPE AT ANY TIME SO AS TO DAMAGE BARK OR BREAK BRANCHES. LIFT AND HANDLE PLANTS ONLY FROM THE BOTTOM OF CONTAINER.

INSTALLATION OF PLANT MATERIALS

1. SCARIFY THE WALLS AND BOTTOM OF ALL PLANT PITS IMMEDIATELY PRIOR TO THE PLACEMENT OF BACKFILL MATERIAL TO INSURE THE REMOVAL OF GLAZING CAUSED BY THE AUGER OR MECHANICAL HOLE DIGGER.

5. SMOOTH PLANTED AREAS TO CONFORM TO SPECIFIED GRADES AFTER FULL SETTLEMENT HAS OCCURRED. CREATE WATERING BASINS AS SHOWN ON PLANS.
6. WATER ALL PLANTS IMMEDIATELY AFTER PLANTING.
7. SPREAD HARDWOOD MULCH TO A DEPTH OF 76 MM.

TREES SHALL BE STAKED FOR SUPPORT DURING THE SAME DAY AS PLANTED. PLANTS SHALL STAND PLUMB AFTER STAKING. THE CONTRACTOR SHALL REMOVE ANY TIES, TAGS OR TAPE ON THE TREE TRUNKS IMMEDIATELY AFTER PLANTING. PHASE 2 CONSTRUCTS THE REMAINING PORTION OF LP 1604 FROM STA 18+100 (2.08 KM SOUTH OF CULEBRA) TO ENDING STA 28+551.5 (US 90) FOR A SUB-TOTAL LENGTH OF 10.45 KM. THE ENTIRE PROJECT IS A TOTAL LENGTH OF 14.13 KM. PHASE 1 (MILESTONE #1) SHALL BE COMPLETED PRIOR TO BEGINNING PHASE 2 UNLESS OTHERWISE APPROVED/DIRECTED BY THE ENGINEER. EACH PHASE IS FURTHER BROKEN INTO SUB-PHASES AND STAGES AS DESCRIBED AS FOLLOWS:

## PHASE 1 - (MILESTONE #1) FROM BEGINING STA 14+420 (1.6 KM NORTH OF CULEBRA) TO STA 18+100 (2.08 KM SOUTH OF CULEBRA)

PHASE 1A (IMMEDIATE IMPROVEMENTS @ TWO EXISTING INTERSECTIONS)
IMPROVE THE EXISTING INTERSECTIONS @ CULEBRA & @ POTRANCO. THIS WORK CONSISTS OF WIDENING EXISTING ROADWAY. REMOVE & REPLACE CONC ISLANDS, MBGF. INSTALL TEMPORARY TRAFFIC SIGNALS AND OVERLAY ENTIRE WIDTH OF ROAD. PLACE PAVEMENT MARKINGS AND OPEN UP TO TRAFFIC.

COMPLETE ALL SAN ANTONIO WATER SYSTEMS WATER ADJUSTMENTS FOR PHASE 1.

PHASE 1B
TRAFFIC TO REMAIN CROSSING CULEBRA CREEK ON THE EXISTING BRIDGE. CONSTRUCT THREE OF THE FOUR BRIDGES @ CULEBRA CREEK / CULEBRA ROAD INTERCHANGE. CONSTRUCT ALL THE SOUTH- BOUND MAINLANES, FRONTAGE ROADS & RAMPS WITH STRUCTURES.

STAGE A - FROM THE BEGINNING OF PROJECT TO STA 15+600 AND FROM STA 16+640 TO STA 18+300, CONSTRUCT TEMPORARY OUTSIDE WIDENING ON THE EXISTING ROADWAY AND SHIFT TWO-WAY TRAFFIC ON THE OUTSIDE PORTION OF THE EXISTING ROAD. CONSTRUCT THE INSIDE PORTION OF THE NORTH- BOUND MAINLANES. WIDEN AND/OR CONSTRUCT CROSS DRAINAGE STRUCTURES FROM 14.6 LEFT OF CENTERLINE TO AT LEAST THE CENTERLINE.

STAGE B - FROM THE BEGINNING OF PROJECT TO STA 15+600 AND FROM STA 16+640 TO STA 18+300, CONSTRUCT TEMPORARY INSIDE WIDENING ON THE NEWLY CONSTRUCTED ROADWAY AND SHIFT TWO-WAY TRAFFIC ON THE INSIDE PORTION OF THE NORTH BOUND MAINLANES AND CONSTRUCT THE OUTSIDE PORTION OF THE NORTH BOUND MAINLANES. WIDEN AND/OR CONSTRUCT CROSS DRAINAGE STRUCTURES FROM 14.6 LEFT OF CENTERLINE TO THE EAST.

CONSTRUCT TRANSITION CONNECTOR FROM STA 18+300 TO STA 18+500 IN PREPARATION TO SWITCH TRAFFIC ONTO NEWLY CONSTRUCTED ROADWAY.

STAGE A - CONSTRUCT THE TWO SOUTHERN HALVES OF THE FRONTAGE ROAD & CULEBRA INTERSECTIONS. THRU TRAFFIC ON LP 1604 SHALL REMAIN IN IT'S CURRENT POSITION. ONE LANE OF THRU TRAFFIC SHALL BE CLOSED ON CULEBRA TO ACCOMADATE CONSTRUCTION.

STAGE B - CONSTRUCT THE TWO NORTHERN HALVES OF THE FRONTAGE ROAD & CULEBRA INTERSECTIONS. THRU TRAFFIC ON LP 1604 TO REMAIN OPEN IN IT'S CURRENT POSITION. THRU TRAFFIC ON CULEBRA SHALL BE MAINTAINED ON AT LEAST ONE LANE IN EACH DIRECTION AND SHALL REMAIN OPEN AT ALL TIMES. DUE TO SOME EXPECTED GRADE DIFFERENCES, THE CONTRACTOR SHALL HAVE A GRADE TRANSITION BETWEEN THE EXISTING AND THE PROPOSED ROADWAY.

SEQUENCE OF WORK PLAN NARRATIVE
AND SEQUENCE OF WORK
PHASES 2A AND 2B

I. SEQUENCE OF WORK

Overview

The northbound frontage road will be constructed during Phase 2A with traffic utilizing the existing Loop 1604 roadway. Two-way traffic will then be switched to the northbound frontage road while the southbound mainlanes are constructed during Phase 2B.

Of the major intersections (Wiseman Blvd, Military Drive, Potranco Rd, and Marbach Rd) only Wiseman Blvd will be closed to traffic during construction except as indicated below. The remaining major intersections will be constructed in stages per the Sequence of Work Plan. The minor intersections (North Ellison Drive, Reed Road, Kilmarnoch Drive, Big Mesa Drive, Westcreek Oaks, Dove Canyon Road and Misty Woods Drive) will be constructed via closure of the intersections to traffic.

The Contractor has the option of presenting a plan to the Engineer for approval for construction of Potranco Road and Marbach Road by closing the intersections to traffic. The plan shall include only weekend construction activities, and shall require the intersections be open to traffic during the week. Plan shall also include a construction sequencing and timeline for completion of the construction activities and a detour plan. These intersections will not be allowed to be closed concurrently.

Contractor shall minimize disruption to the traveling public by limiting intersection closures to weekends only. North Ellison and Wiseman Blvd shall not be closed concurrently. Construction of Reed Rd., Kilmarnoch Dr. and Big Mesa Dr. shall be the last items constructed under Phase 2A. Upon completion of Big Mesa Dr. and Reed Rd., both intersections will be closed to traffic until the traffic shift to the NBFR under Phase 2B. Reed Rd, and Kilmarnoch Dr shall not be closed concurrently. Big Mesa Dr and Marbach Rd shall not be closed concurrently.

The Contractor shall present a plan to the Engineer for approval delineating a timeline schedule and sequencing plan for intersection closure and construction. The following stipulations shall apply to the sequencing plan.

Phase 2A - Northbound Frontage Road/East half of Major Intersections

Construction shall be completed in the following sequence:

1. Construct permanent Culvert 25 and 26. Construction shall be night time or weekend and shall be done under traffic.
2. Install temporary traffic signals at Military Dr. intersection. Contractor shall be considerate of location of permanent signal poles.
3. In accordance with the details of the Sequence of Work, construct:
   a. Detours
   b. Place CTB's and VIA's as shown on the Sequence of Work Plan for Phase 2A.
4. Construct the Phase 2A portion of both the permanent and/or temporary drainage structures as shown on the Sequence of Work Plan.
5. Construct the northbound frontage road through the Hot Mix TY C and place topsoil and seeding between NBFR and the East right-of-way line.
   a. Provide for temporary driveway access as shown on the Sequence of Work Plan and as approved by the Engineer.
      i. The Blazing Star RV Resort driveway shall not be constructed until sufficient length of the NBFR has been completed south of the existing driveway to allow negotiable access to the temporary cross-over at Westcreek Oakes Drive.
   b. Construct the frontage road sections requiring flex base (from intersection to intersection).
   c. Construct intersections, as outlined in Overview above.
      i. Each intersection must be completed to a level as approved by the Engineer before the next intersection is started.
      ii. Closed intersections may be opened to traffic at such times as deemed appropriate by the Engineer.
      iii. Construct portions of the major intersections using the staged construction as outlined in the Sequence of Work and detailed above.
         (a) Construction shall include the placement of conduit and foundations for permanent traffic signals
6. Install temporary traffic signals at all of the remaining major intersections. Contractor shall be considerate of location of permanent signal poles.
7. Construct temporary roadway connection from the southbound mainlanes to the northbound frontage road at STA 18+140 and Dove Canyon detour as shown on Sequence of Work layouts.

Phase 2B - Southbound Mainlanes/West half of Major Intersections

The work shall be completed in the following sequence:

1. Place CTB's and VIA's as shown on the Sequence of Work Plan for Phase 2B.
2. Move traffic to NBFR
   a. Revise placement of temporary traffic signal heads to match that of Phase 2B temporary traffic signal plans, two shall be accomplished prior to moving traffic to the NBFR.
3. Complete construction of the drainage structures.
4. Construct the southbound mainlanes, remaining portion of the major intersections, Dove Canyon Road through Hot Mix TY C and the southbound mainlane Medio Creek bridge.
   a. Construct portions of the major intersections using the staged construction as outlined in the Sequence of Work and detailed above.
   b. Major intersection construction shall include conduit and foundations for permanent traffic signals.
   c. Dove Canyon Road reconstruction
      i. Contractor shall minimize disruption to access of existing development residents by scheduling road closures at non-peak hours and shall limit closures to no more than one hour at a time. Access for emergency services must be provided at all times. Any closures/disruptions must be approved by the Engineer and coordinated with existing development, prior to implementation.
      ii. Dove Canyon detour shall be constructed prior to start of road reconstruction.
      iii. Detour shall require daily grade modification from STA 0+000 to STA 0+125 to accommodate corresponding level of roadway reconstruction.
      iv. The detour within these limits shall consist of a material as approved by the Engineer and shall receive the normal construct detour surface until the detour reaches final grade.
      v. Temporary drainage and any incidentals required are the responsibility of the contractor and are not a separate pay item. This will include, but not be limited to, ditch revisions and/or grading required to facilitate drainage, pipe, erosion control devices, etc., and will be considered subsidiary to Item 508 "Construct Detours".
5. Construct the Westcreek Oaks intersection by closing the intersection and providing detour per the Sequence of Work.
6. Install permanent traffic signals at the major intersections.
7. Place permanent signs.
8. Place Hot Mix Type C (Surf) and place permanent pavement markings.
9. Move traffic to ultimate lane configuration.

Phase 3 - Final Clean-up

1. Place remaining lift of Hot Mix TY C (SURF) on Phase 2A constructed roadways.
2. Place permanent pavement markings and remaining signage.
3. Upon completion of the work and before final acceptance is made, the Contractor shall shape and finish such portion of the right-of-way as may have been disturbed in making the above provisions for traffic and will be required to leave the entire right-of-way in a smooth, neat and orderly condition with no weeds.

## SITE CONDITIONS AND PLACEMENT GUIDELINES

| CONDITION | RECOMMENDATIONS | ILLUSTRATION |
|---|---|---|
| 1. Angle of array in relation to center line of obstacle | Not recommended for more than 10° |   |
| 2. Bi-directional traffic | Offset array to avoid rear corner module snagging potential by traffic in the upstream direction of flow |   |
| 3. Module spacing: Module to Module / Module to fixed object | 150 mm usual / 355 mm |   |
| 4. "Coffin" corner | Shield 760 mm outside of fixed object |  |
| 5. Sloping sites (lateral and longitudinal) (See Gen. Note 6) | 1:10 Maximum (V:H) |   |
| 6. Curbs and raised islands (See Gen. Note 4) | No more than 100 mm high (remove if possible) | |
| 7. Foundation pads (See Gen. Note 7) | Flat surface; concrete or asphalt |   |
| 8. Maintenance | Keep site clear of debris and snow |   |
| 9. Sand densities | 1600 kg/cubic meter |   |
| 10. Vandalism, impact and or maintenance | Check periodically for damages | |

DISCLAIMER:
The use of these guidelines are governed by the "Texas Engineering Practice Act". No warranty of any kind is made by TxDOT for any purpose whatsoever. TxDOT assumes no responsibility for the conversion of these guidelines to other formats or for incorrect results or damages resulting from its use.

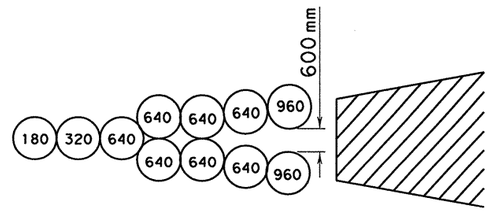
## GENERAL NOTES

1. Rear modules should overlap (in width) the fixed object on each side by a minimum of 760 mm.
2. Modification of array: When proximity of traffic lanes exclude the use of a wider barrier. The front of the barrier may retain the standard width but the rear can be widened by spacing as shown in this diagram.



3. Barrier can be placed at any distance from the shoulder both at roadside and in median sites from 0 to 9 meters depending on the location of the fixed object. Angling of the barrier toward oncoming traffic is suggested from 3 to 10 degres depending on space available.
4. Whenever possible, curbs 100 mm and higher should be removed from installation area. However, when removal is not possible, modules can be seperated along the barrier axis to fit the situation.
5. Longitudinal spacing of modules may be increased where space permits for example, 600 mm or even 900 mm spacing of some of the modules may permit the design Engineer to exploit all the space allocated for an energy-absorbing barrier.
6. The entire area of the crash cushion installation and approaches shall be graded so that the maximum slope does not exceed 1:10 (vertical : horizontal) in any direction.
7. Where required, support pads will be measured and paid for in accordance with pertinent bid items.

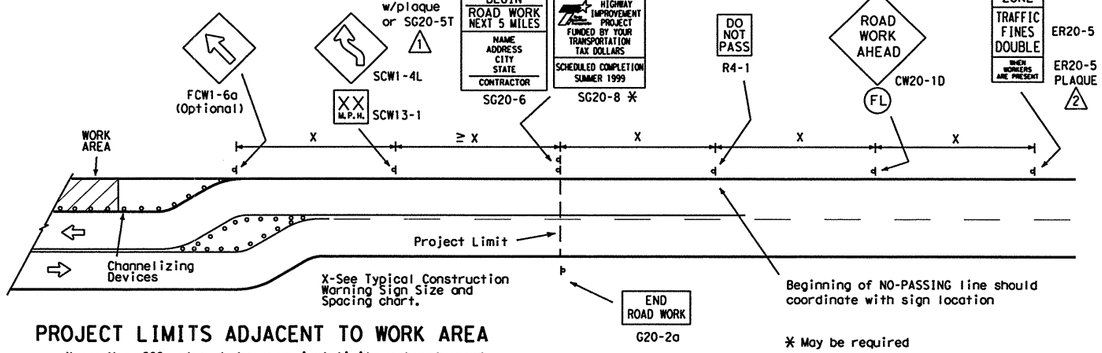
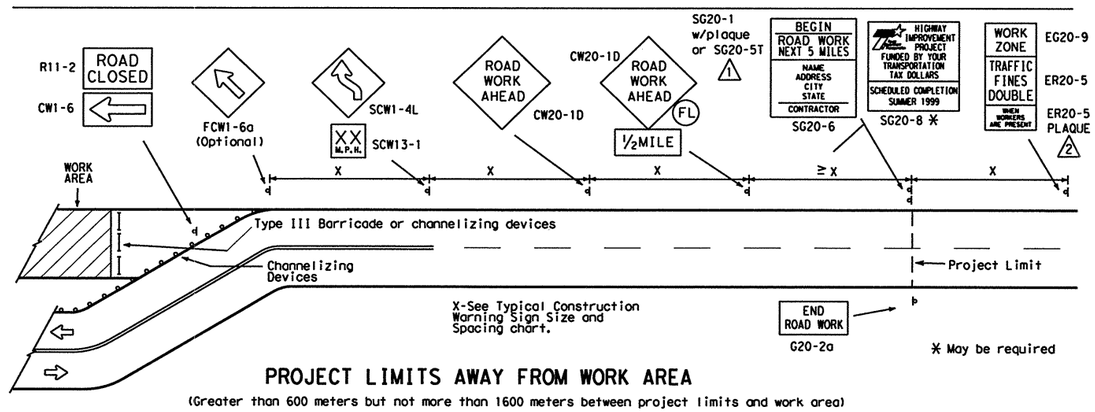
# PROJECT LIMIT TRAFFIC CONTROL DEVICES



## PROJECT LIMITS ADJACENT TO WORK AREA

(Less than 600 meters between project limits and work area)



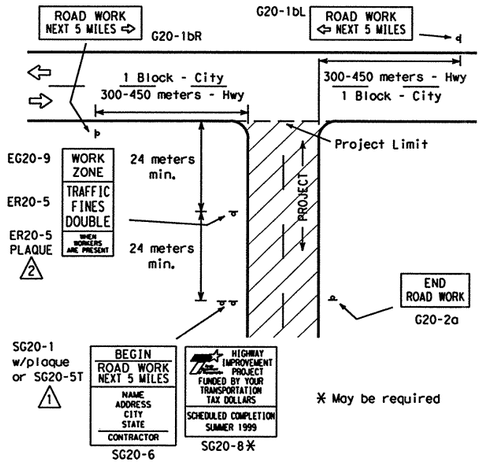
## PROJECT LIMITS AWAY FROM WORK AREA

(Greater than 600 meters but not more than 1600 meters between project limits and work area)

### PROJECT LIMIT GENERAL NOTES

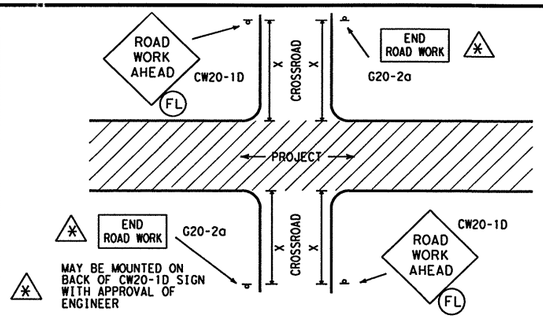
SIGNS AND WARNING LIGHTS

1. When specified on this sheet or other sheets in the plans, warning lights for a sign shall be installed and maintained by the contractor. Warning lights shall be attached to the sign support using a 1/2" bolt (minimum) of sufficient length for three washers, lock washer and a nut.
2. Warning lights shall be maintained as directed by the Engineer.
3. Appropriate standard traffic control devices shall be used as required by the plans. Any variation in the plans shall be documented by written agreement between the Engineer and the contractor's responsible person.
4. As a general rule, additional traffic control devices in advance of the project limits should only be used in those cases where a work area, a detour, or a potentially hazardous location is less than 600 meters inside the project limits.
5. The traffic control devices used in the above illustrations are examples only. Field conditions and engineering judgement should dictate the most appropriate traffic control devices to be used. Any variation in the plans shall be documented by written agreement between the Engineer and the contractor's responsible person.
6. As detailed above, the ROAD WORK NEXT X MILES, CONTRACTOR and END ROAD WORK signs shall be erected at or near the project limits and the WORK ZONE TRAFFIC FINES DOUBLE sign shall be erected in advance of the project limits. These signs should be adjusted to provide adequate spacing to other signs. The OBSERVE WARNING SIGNS STATE LAW sign shall be installed when required elsewhere in the plans.
7. With the agreement of an adjacent project Engineer, the Engineer(s) may allow the omission of END ROAD WORK, TRAFFIC FINES DOUBLE, and other advance warning signs if the signing would be redundant and the work areas appear continuous to the motorists. If the adjacent project is completed first, the contractor will erect the necessary warning signs as shown on these sheets, the TCP sheets or as directed by the Engineer. The ROAD WORK NEXT X MILES sign shall be revised to show appropriate work zone distance.
8. Duplicate construction warning signs should be erected on the median side of divided highways where median width will permit and traffic volumes justifies the signing.
9. Except for devices required by Note 6, traffic control devices should be in place only while work is actually in progress or a definite need exists.
10. Sign size should be based on the "Texas Manual on Uniform Traffic Control Devices for Streets and Highways" (TMUTCD).
11. The Special Public Information sign (G20-8 shall be installed at the project limits when required elsewhere in the plans. Refer to SMD Standards for approved mounting details.

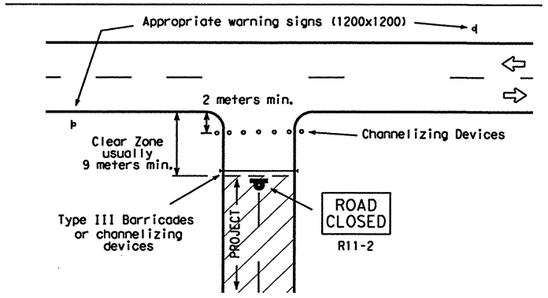


## PROJECT LIMITS AT T-INTERSECTION

1. The ROAD WORK NEXT X MILES sign should be erected on the intersected highway as detailed above.
2. On the intersected roadway, additional traffic control devices, such as a flagger and accompanying signs or other signs, should be used when work is being performed at or near the intersection.

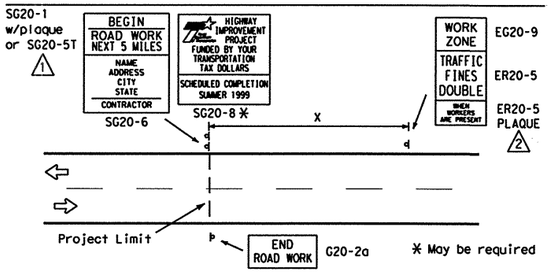


## CROSSROAD SIGNING AND BARRICADING



## PROJECT LIMITS FOR CLOSED ROADWAY

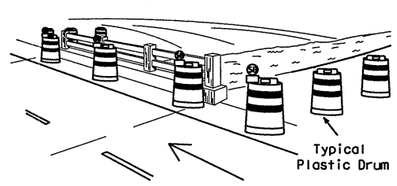
Barricades shall be erected completely across roadway. Channelizing Devices may be drums, vertical panels or cones as specified in the plans.



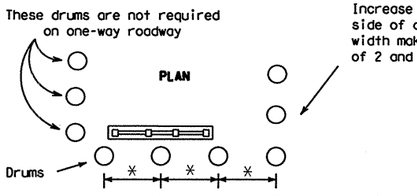
## PROJECT LIMITS AWAY FROM WORK AREA

(Greater than 1.6 kilometers between project limits and work area)

## CULVERT WIDENING OR OTHER ISOLATED WORK WITHIN THE PROJECT LIMITS



1). Where positive redirectional capability is provided, drums may be omitted.
2). Plastic construction fencing may be used with drums for safety as required in the plans.
3). Vertical Panel on flexible support may be substituted for drums when shoulder width is less than 1.2 m.
4). When shoulder width is greater than 3.6 m, steady-burn lights may be omitted, if drums are used.



Increase number of plastic drums on side of approaching traffic if crown width makes it necessary. (minimum of 2 and maximum of 4 drums)

10/99 Revision

1 Added "BEGIN" to "ROADWORK NEXT XX MILES" sign

2 Added "WHEN WORKERS ARE PRESENT" plaque

### CROSSROAD SIGNING AND BARRICADING

1. Except as noted elsewhere in plans, the usual minimum signing on a cross-road approach should be one CW20-1D ROAD WORK AHEAD sign and G20-2a END ROAD WORK sign. Where speeds and volumes are relatively low, a smaller ROAD WORK AHEAD sign may be used.

When approved by the Engineer, on low volume crossroads, advance warning signs may be the reduced size 900 mm x 900 mm ROAD WORK AHEAD (CW20-1D) sign mounted back to back with the reduced size 900 mm x 450 mm END ROAD WORK (SG20-2a) sign. See the "STANDARD HIGHWAY SIGN DESIGNS for TEXAS" manual and BC(9) thru BC(9C) for sign design details. On low volume crossroads, advance signing may be omitted if approved by the Engineer.

Additional signs such as FLAGGER AHEAD, LOOSE GRAVEL, or other appropriate signs may be required. When additional signs are required, such signs will be considered part of the minimum requirements.

2. The G20-1a sign shall be required on major crossroads to advise motorists of the length of construction in either direction from the intersection.
3. On higher volume crossroads additional traffic control devices may be noted elsewhere in the plans.
4. When work occurs in the intersection area, appropriate traffic control devices shall be in place.

WARNING LIGHTS

Warning lights shall meet the requirements of the "Texas Manual on Uniform Traffic Control Devices for Streets and Highways."

Flashing and Steady-Burn Warning Lights shall NOT be installed on barricades.

Type A-Low Intensity Flashing Warning Lights are commonly used with signs. They are intended to warn of an approaching potentially hazardous area. Their use shall be as indicated on this sheet and/or other sheets of the plans by the designation "(FL)".

Type-C Steady Burn Lights are intended to be used in a series for delineation to supplement other traffic control devices. Their use shall be as indicated on this sheet and/or other sheets of the plans by the designation "(SB)".

# GENERAL NOTES

## FOR TYPE III BARRICADES

Type III Barricades are to be used at each end of construction projects closed to all traffic.

Barricades extending across a roadway should have stripes that slope downward in the direction toward which traffic must turn in detouring. When both right and left turns are provided for, the chevron striping may slope downward in both directions from the center of the barricade.

Striping of rails, for the right side of the roadway, should slope downward to the left. For the left side of the roadway, striping should slope to the right.

Identification markings may be shown only on back side of barricade rails. Maximum height of letters shall be 25mm.

Barricades shall not be placed parallel to traffic unless an adequate clear zone is provided (see BC(1)).

DISCLAIMER
The use of this standard is governed by the "Texas Engineering Practice Act". No warranty of any kind is made by TxDOT for any purpose whatsoever. TxDOT assumes no responsibility for the conversion of this standard to other formats or for incorrect results or damages resulting from its use.

**GENERAL NOTES:**

1. Sign Supports detailed on this sheet have been crash tested and are approved breakaway systems. TxDOT acceptance of these breakaway systems does not cover the structural features of the sign support systems.
2. Sign support systems approved by FHWA may be used as approved fixed sign supports. The contractor shall provide documentation from FHWA approving sign support systems not shown on this sheet.
3. Sign support systems listed on this sheet may be suitable for only certain soil types. The contractor is responsible for selecting appropriate sign support systems for soil conditions on each project.
4. Barricades shall NOT be used as sign supports.

**WORK ZONE SIGNS**

**GENERAL**

Standard signs shall be used as required by the BC Standard sheets, the plans, or as directed by the Engineer to regulate, warn, and guide traffic. All sign usage and erection shall be in strict accordance with the "Texas Manual on Uniform Traffic Control Devices for Streets and Highways" (TMUTCD). The Contractor shall maintain each sign as directed by the Engineer.

The Contractor may use either the sign designs shown on the BC Standard Sheets, or those sign designs shown in the "Standard Highway Sign Designs for Texas" (SHSD). All work zone signs provided for in the TMUTCD but not detailed in the plans may be used when directed by the Engineer.

**SIZE OF SIGNS**

On secondary roads or city streets where speeds are low, smaller size construction warning signs may be used with the written approval of the Engineer and if the sign size is in accordance with the "Typical Construction Warning Sign Size and Spacing Chart" shown on page 6C-11 of the TMUTCD, Part VI.

**SPLICES**

All wooden sign panels fabricated from 2 or more pieces shall have one or more plywood cleats, 13 millimeters thick by 150 millimeters wide, fastened to the back of the sign and extending fully across the sign.

Wood Sign posts shall not be spliced.

**REFLECTIVE SHEETING**

Reflectorized signs shall be constructed of retroreflective sheeting meeting the color and reflectivity requirements of Material Specification D-9-8300 or D-9-8310. Day only is defined as a device that is used only during daylight hours.

Type A, B or C sheeting may be used for all day only applications. Type A sheeting should be used for all white background regulatory signs. Type C sheeting shall be used for all other applications.

The above applications of sheeting grades to different type signs will apply unless otherwise specified in the plans.

TYPE A = Engineer Grade, TYPE B = Super Engineer Grade, TYPE C = High Specific Intensity

**SIGN LETTERS**

All sign lettering shall be clear, open rounded type capital letters as approved by and as published by the Federal Highway Administration (FHWA). Signs and lettering shall be of first class workmanship equivalent to that of the Department standard signs.

**WORK DURATION TERMINOLOGY**-(as defined by the "Texas Manual on Uniform Traffic Control Devices")

Long-term Stationary = occupies a location 3 or more days;
Intermediate-term Stationary = occupies a location from overnight to 3 days;
Short-term Stationary = daylight work that occupies a location from 1 to 12 hours;
Short Duration = occupies a location up to 1 hour.

**SUPPORTS AND MOUNTING HEIGHT**

The bottom of Long-term / Intermediate-term signs shall be at least 2100 mm above the paved surface. The bottom of any supplementary plaques shall be at least 1800 mm above the paved surface.

The bottom of Short-term / Short Duration signs shall be a minimum of 300 mm above the pavement surface but no more than 600 mm above the ground. Long-term / Intermediate-term Signs may be used in lieu of Short-term / Short Duration signing. Short-term / Short Durations signs shall be used only during daylight and removed at the end of the workday.

Regulatory signs shall be mounted at least 2100 mm above the paved surface regardless of work duration.

Wood sign supports shall be painted white.

**SIGN SUPPORT WEIGHTS**

Where sign supports require the use of weights to keep from turning over, the use of some type of sandbag is recommended. The use of pieces of rock, concrete, iron, steel or other solid objects will not be permitted.

Sandbags shall only be placed along or upon the base supports of the device and shall not be suspended above ground level or hung with rope, wire, chains or other fasteners.

**REMOVING OR COVERING**

When sign messages may be confusing or no longer apply, the signs shall be removed or completely covered. When signs are covered the material used shall be opaque, such as heavy mil black plastic. Burlap shall not be used to cover signs. Signs shall be removed upon completion of the work.

Duct tape or other adhesive material shall not be affixed to sign face.

**GENERAL NOTES**

Drums and all related items shall comply with the requirements of the current version of the "Texas Manual on Uniform Traffic Control Devices" (TMUTCD).

**Only pre-qualified products shall be used. A list of compliant products and their sources may be obtained by writing or faxing:**

**Standards Engineer**
**Traffic Operations Division - TE**
**Texas Department of Transportation**
**125 East 11th Street**

Drums, bases, and related materials shall exhibit good workmanship and shall be free from objectionable marks or defects which would adversely affect their appearance or serviceability.

After drums and other traffic control devices are placed, the work zone should be driven through both during the day and after dark to be certain that these devices are functioning as intended.

**PLASTIC DRUM** - Prequalified plastic drums shall meet the following requirements.

**GENERAL DESIGN REQUIREMENTS**

Plastic drums shall be of a two-piece design; the "body" of the drum shall be the top portion of the drum and the "base" shall be the bottom of the drum.

The body and base shall lock together in such a manner that the body separates from the base when impacted by a vehicle traveling at a speed of 35 km/h or greater but prevents accidental separation due to normal handling and/or air turbulence created by passing vehicles. Plastic drums that have been in use for more than two years generally do not have enough locking strength to prevent accidental separation. Plastic drums identified for replacement by the project engineer, inspector or their designee shall be replaced within 24 hours with an approved device.

Plastic drums shall be constructed of lightweight flexible, and deformable materials. Use of metal drums or single piece plastic drums as channelization devices or sign supports shall not be allowed.

Drums shall present a profile that is a minimum of 450mm in width at the 900mm height when viewed from any direction. The height of drum unit (body installed on base) shall be a minimum of 900mm and a maximum of 1100mm.

Drums shall be tapered to allow nesting of a minimum of 5 drum bodies for ease in transport.

The top of drum shall have a built-in handle for easy pickup and shall be designed to drain water and not collect debris. The handle shall have a minimum of two widely spaced 14mm diameter holes to allow attachment of a warning light, delineator reflector unit or sign.

The exterior of the drum body shall have a minimum of four alternating orange and white retroreflective circumferential stripes not less than 100mm in width nor greater than 200mm. Any non-reflectorized space between any two adjacent stripes shall not exceed 50mm in width.

Bases shall have a maximum width of 900 mm, a maximum height of 100mm, and a minimum of two footholds of sufficient size to allow base to be held down while separating the drum body from the base.

Plastic drums shall be constructed of ultra-violet stabilized, orange, high-density polyethylene (HDPE) or other approved material.

Drum body shall have a minimum unballasted weight of 3.5 kg and maximum unballasted weight of 5.0 kg. The wall of the drum body shall be a minimum of 1.75mm in thickness. Weight of any drum supplied shall not vary more than 0.25 kg from that of the prequalified sample.

Drum and base shall be marked with manufacture's name, model number, and year and month of construction.

**RETROREFLECTIVE SHEETING**

The retroreflective stripes used on drums shall be constructed of retroreflective sheeting meeting the color and reflectivity requirements of Departmental Materials Specification D-9-8300: Flat Surface Reflective Sheeting, Type C unless otherwise specified in the plans.

Drums used only during daylight hours may use any type of sheeting meeting the color and retroreflective color requirements of Departmental Materials Specification D-9-8300.

The sheeting shall be suitable for use on and shall adhere to the drum surface such that, upon vehicular impact, the sheeting shall remain adhered in-place and exhibit no delaminating, checking, cracking, or loss of reflectivity other than that loss due to abrasion of the sheeting surface.

**BALLAST**

Unballasted bases shall be large enough to hold up to 22.5 kg of sand. Bases with built-in ballast shall weigh between 18.0 and 22.5 kg.

The ballasted base should weigh between 16 kg (minimum) and 34 kg (maximum). The ballast may be sand in one to three sand bags separate from the base, sand in a sand-filled plastic base, a integral crumb rubber base and ballast or other ballasting devices as approved by the Engineer. Stacking of sand bags will be allowed, however height of sand bags above pavement surface may not exceed 300mm.

The ballasts shall not be heavy objects, water, or any material that would become hazardous to motorists, pedestrians, or workers when the drum is struck by a vehicle. When used in regions susceptible to freezing, drums shall have drainage holes in the bottoms so that water will not collect and freeze becoming a hazard when struck by a vehicle. Ballast shall not be placed on top of drums

Adhesives may be used to secure base of drums to pavement.

**SIGNS, CHEVRONS, AND VERTICAL PANELS**

Signs used on plastic drums shall be manufactured using substrates listed on the Compliant Products List.

Chevrons and other work zone signs with an orange background shall be manufactured with Type C (high intensity grade) retroreflective sheeting meeting the color and reflectivity requirements of "Departmental Materials Specification D-9-8300: Flat Surface Reflective Sheeting, Type C" unless otherwise specified in the plans.

Signs with white backgrounds, such as the KEEP RIGHT sign (R4-8 series), shall be manufactured with Type A (engineer grade) sheeting.

Approved sign messages for signs mounted on plastic drums are the Chevron (CW1-8), the KEEP RIGHT/LEFT sign (R4-7 or R4-8 series), the Vertical Panel, and the Opposing Lane Divider. Other sign messages (text or symbolic) may be used as approved by the Engineer. Sign dimensions shall not exceed 450 mm in width or 600 mm in height. Refer to acceptable materials list for approved substrate materials. Diagonal stripes on Vertical Panels shall slope down toward the intended traveled way.

Signs shall be installed using one 1/2 inch bolt (nominal) and nut, two washers, and one locking washer for each connection. Mounting bolts and nuts shall be fully engaged and adequately torqued. Bolts should not extend more than 13mm beyond nuts. The hardware used for the mounting of signs onto plastic drums shall be of adequate quality for this use.

**WARNING LIGHTS, WARNING REFLECTORS, AND DELINEATORS**

Type A flashing warning lights are intended to warn drivers that they are approaching or are in a potentially hazardous area. Type A flashing warning lights are not intended for delineation and shall not be used in a series.

Type B warning lights shall not be attached to a drum.

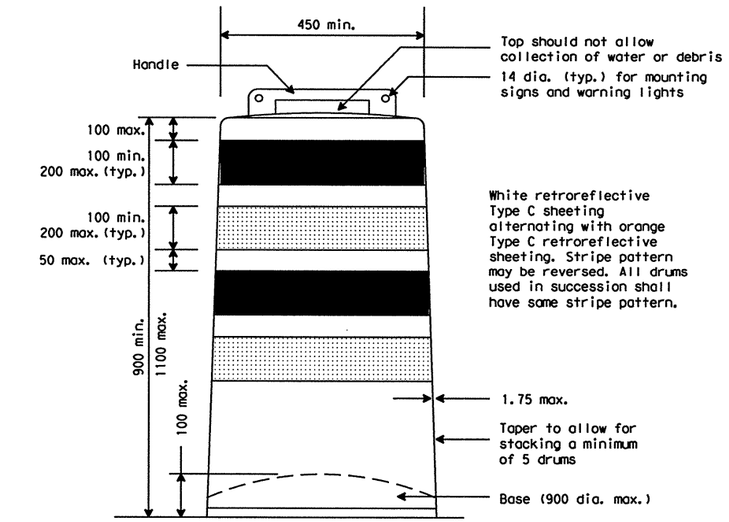
Type C steady-burn warning lights are intended to be used in a series to delineate the edge of the traveled way on detours, on lane changes, on lane closures, and on other similar conditions. Type A and Type C warning lights shall be installed at locations as detailed on other sheets in the plans.

A warning reflector or approved substitute may be mounted on a plastic drum as a substitute for a Type C, Steady Burn Warning Light at the discretion of the contractor unless otherwise noted in the plans. The warning reflector shall be manufactured from a sign substrate from the approved list for use on plastic drums. The warning reflector shall have a retroreflective surface area (one-side) no less than 20,000 sq. mm.

The side of the warning reflector facing approaching traffic shall be fully reflectorized using retroreflective sheeting meeting the color and reflectivity requirements for ASTM Type 4 retroreflective sheeting as described in ASTM Design Standard 4956-93B. When used near two-way traffic, both sides of the warning reflector shall be fully reflectorized. The warning reflector should be mounted on the side of the handle that faces approaching traffic so that the maximum amount of reflective sheeting is visible to traffic approaching in the adjacent lane. Delineators may be used as directed by the Engineer. Delineators may not be used to substitute for warning lights. Warning lights shall not be installed on a drum that has a sign, chevron or vertical panel.

Type(A) Class(1), Type(A) Class(2), or Type(B) Reflector Units (D & OM Standard) may be attached to drums to delineate the intended vehicular path. The color of the reflector unit shall correspond to the marking it is supplementing or for which it is substituting. The reflective unit shall be attached to the handle of the drum using the mounting hole nearest the traveled way and shall be aligned perpendicular to approaching traffic.

Contractor shall provide, on request from project engineer, a letter from the drum manfacturer certifying the plastic drum model number, the year and month of construction and that it meets the specifications on this standard sheet.



Color sequence of reflective sheeting may be reversed.

# WORK ZONE PAVEMENT MARKINGS

## GENERAL

The Contractor shall be responsible for maintaining work zone and existing pavement markings on all roadways open to traffic within the projects limits unless otherwise stated in the plans. Color, patterns, and dimensions shall be in conformance with the Texas Manual on Uniform Traffic Control Devices (TMUTCD). Additional supplemental pavement marking details may be found in the plans or specifications.

Work zone pavement markings shall consist of guidemarks, short term markings and/or standard pavement markings. Unless otherwise shown in the plans, materials used for work zone pavement markings shall be thermoplastic, raised pavement markers, prefabricated pavement marking material, temporary flexible-reflective roadway marker tabs or other materials approved by the Engineer. Thermoplastic shall not be used for removable markings.

All roadways to be opened to traffic shall be marked with short term markings or standard markings as shown in the plans, at the end of each day's operation. Unless otherwise shown in the plans or approved in writing by the Engineer, all concrete surfaces shall have standard markings in place prior to opening to traffic.

Standard pavement markings shall be installed in accordance with the Texas Manual on Uniform Traffic Control Devices (TMUTCD) and as shown on the plans. When short term markings are required on the plans, short term markings shall conform with the TMUTCD, the plans and details as shown on the Standard WZ(STPM).

All asphaltic surfaces which are to be opened to traffic shall be marked with guidemarks immediately following placement and final rolling of any course. Guidemarks shall consist of a single temporary flexible-reflective roadway marker tab or a single temporary construction raised pavement marker at 40 foot spacing.

Guidemarks shall be placed in proper alignment with the final location of future pavement markings. Any guidemarks not in alignment with pavement markings shall be removed by the Contractor at the Contractor's expense. Guidemarks shall not be used to simulate edgelines.

When inclement weather prohibits the application of short term markings or standard markings as called for on the plans, upon approval of the Engineer, guidemarks may be considered as temporary short term markings for asphaltic surfaces. The placement of pavement markings as shown on the plans may be delayed until such time that weather permits application of pavement markings.

When standard pavement markings are not in place and the roadway is opened to traffic, DO NOT PASS signs shall be erected to mark the beginning of the sections where passing is prohibited and PASS WITH CARE signs shall be erected to mark the beginning of the sections where passing is permitted.

## RAISED PAVEMENT MARKERS

Raised pavement markers are to be placed according to the patterns on BC(8). Raised pavement markers used as standard pavement markings or to supplement removable markings shall meet the requirements of Item "RAISED PAVEMENT MARKERS".

Unless otherwise shown on the plans, raised pavement markers will not be allowed for words, symbols, and shapes, diagonal or transverse lines.

## PREFABRICATED PAVEMENT MARKINGS

Removable prefabricated pavement markings shall be a material of manufacture and product code or designation shown on the list of approved materials covered by the Department Materials Specification D-9-8241.

Non-removable prefabricated pavement markings (foil back) shall be a material of manufacture and product code or designation shown on the list of approved materials covered by the Specification TxDOT 550-74-01.

The lists of approved prefabricated work zone pavement marking materials may be obtained from TxDOT General Services Division.

## MAINTENANCE

The Contractor will be responsible for maintaining work zone pavement markings within the project limits. Work Zone Pavement Markings shall be inspected in accordance with the frequency and reporting requirements of work zone traffic control device inspections. The markings should provide a visible reference for a minimum distance of 90 meters during normal daylight hours and 50 meters when illuminated by automobile low-beam headlights at night, unless sight distance is restricted by roadway geometrics. Markings failing to meet this criteria shall be replaced as required by the Engineer.

## REMOVAL OF PAVEMENT MARKINGS

Removal of pavement markings includes centerline, channelizing lines, lane lines, edge lines, words, arrows, symbols and raised pavement markers.

Pavement markings that are no longer applicable and which may create confusion or direct a motorist toward or into the closed portion of the roadway, shall be removed or obliterated before the roadway is open to traffic. The above shall not apply to detours of a short duration of a few hours, where flaggers and/or sufficient channelizing devices are used in lieu of markings to outline the detour route and the detour is not to be maintained during nighttime.

Pavement markings shall be removed to the fullest extent possible, so as not to leave a discernible marking, by any method that does not materially damage the surface or texture of the pavement. The removal of pavement markings may require resurfacing or seal coating portions of the roadway, normally full lane widths. Subject to the approval of the Engineer, any method that proves to be successful on a particular type pavement may be used. Blast cleaning may be used but will not be required unless specifically shown in the plans. Over-painting of the markings SHALL NOT BE permitted. Removal of raised pavement markers shall be as directed by the Engineer.

Removal of existing pavement markings and markers will be paid for directly in accordance with the Item "ELIMINATING EXISTING PAVEMENT MARKINGS AND MARKERS" unless otherwise stated elsewhere in the plans.

STAPLES OR NAILS SHALL NOT BE USED TO SECURE TEMPORARY FLEXIBLE-REFLECTIVE ROADWAY MARKERS TABS TO THE PAVEMENT SURFACE

Temporary flexible-reflective roadway marker tabs used as guidemarks shall meet the requirements of Departmental Material Specification D-9-8242.

Tabs detailed on this sheet are to be inspected and accepted by the Engineer or designated representative. Sampling and testing is not normally required, however at the option of the Engineer, either "A" or "B" below may be imposed to assure quality before placement on the roadway.

A) Select five (5) or more tabs at random from each lot or shipment and submit to the Construction Division, Materials and Tests section to determine specification compliance.
B) Select five (5) tabs and submit to the following test. Affix five (5) tabs at 600 mm intervals on an asphaltic pavement in a straight line. Using a medium size passenger vehicle or pickup, run over the markers with front and rear wheels at a speed of 35 to 40 miles per hour, four times in each direction. No more than one (1) out of five reflective surfaces shall be lost or displaced as a result of this test.

Guidemarks shall be designated as:
YELLOW - (two amber reflective surfaces with yellow body).
WHITE - (one silver reflective surface with white body).

Dimensions indicated on this sheet are typical and approximate. Variations in size and height may occur between markers or devices made by manufacturers, by as much as 5 millimeters, unless otherwise noted.

All dimensions are in millimeters unless otherwise noted.

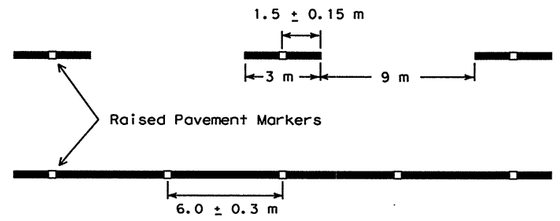
## REMOVABLE MARKINGS WITH RAISED PAVEMENT MARKERS

If raised pavement markers are used to supplement REMOVABLE markings, the markers shall be applied to the top of the tape at the approximate mid length of tape used for broken lines and at approximately 6 meters spacing for solid lines. This allows an easier removal of raised markers and tape.



NOTES:
Pattern A is the Department Standard, however Pattern B may be used if approved by the Engineer.
Prefabricated markings may be subsitituted for reflectorized pavement markings.

Raised pavement markers used as standard pavement markings shall meet the requirements of items "RAISED PAVEMENT MARKERS" and "EPOXY AND ADHESIVES."

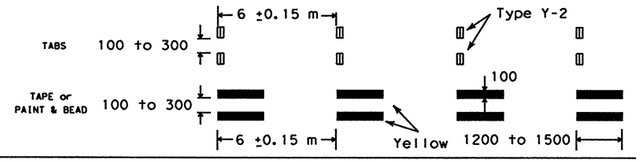
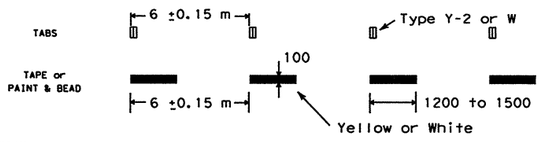
# WORK ZONE SHORT TERM PAVEMENT MARKINGS DETAILS

## SOLID LINES

### DOUBLE NO-PASSING LINE

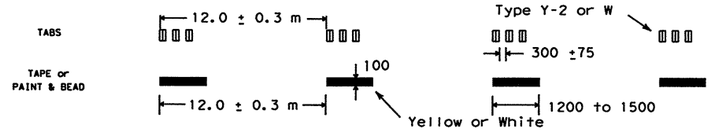


### SINGLE NO-PASSING LINE or CHANNELIZATION LINE



## BROKEN LINE

(FOR CENTER LINE OR LANE LINE.)



NOTES:

1. Short term pavement markings may be paint and beads, prefabricated markings (stick down tape) or temporary flexible-reflective roadway marker tabs unless otherwise specified elsewhere in plans. Paint and beads shall not be used as removable short term pavement markings.
2. Short term pavement markings shall NOT be used to simulate edge lines.
3. Dimensions indicated on this sheet are typical and approximate. Variations in size and height may occur between markers or devices made by manufacturers, by as much as 6 mm, unless otherwise noted.
4. Temporary flexible-reflective roadway marker tabs will require normal maintenance replacement when used on roadways with an ADT per lane of up to 7500 vehicles with no more than 10% truck mix. When roadways exceed these values, additional maintenance replacement of devices should be planned.
5. No segment of roadway open to traffic shall remain without standard pavement markings for a period greater than 14 calendar days. The Contractor will be responsible for maintaining short term pavement markings until standard pavement markings are in place. When the Contractor is responsible for placement of standard pavement markings, no segment of roadway shall remain without standard pavement markings for a period greater than 14 calendar days unless weather conditions prohibit placement. Standard pavement markings shall be placed as soon as weather permits.
6. For two lane, two-way roadways, DO NOT PASS signs shall be erected to mark the beginning of sections where passing is prohibited and PASS WITH CARE signs shall be erected to mark the beginning of sections where passing is permitted. Signs shall be in accordance with the TMUTCD and may be used to indicate the limits of no-passing zones for up to 14 calendar days. Standard pavement markings should then be placed.
7. For low volume two lane, two-way roadways of 4000 ADT or less, no-passing lines may be omitted when approved by the Engineer. DO NOT PASS and PASS WITH CARE signs shall be erected (see note 6).

TEMPORARY FLEXIBLE-REFLECTIVE ROADWAY MARKER TABS (TABS)

1. Temporary flexible-reflective roadway marker tabs detailed on this sheet will be designated Type Y-2 (two amber reflective surfaces with yellow body); Type Y (one amber reflective surface with yellow body); and Type W (one silver reflective surface with white body). Additional details may be found on BC(8).
2. Tabs shall meet requirements of Department Material Specification D-9-8242.
3. The body of Tabs shall consist of a base and vertical wall made of polyurethane, polyester elastomer or other material approved by the Materials and Tests Division.
4. The reflective material shall be protected with an easily removable heat resistant transparent cover capable of withstanding and protecting reflective material from application of 205 degree Celsius asphalt. Stapling or clipping devices used to retain the protective cover shall not protrude through reflective material.
5. Tabs detailed on this sheet are to be inspected and accepted by the Engineer or designated representative. Sampling and testing is not normally required, however at the option of the Engineer, either "A" or "B" below may be imposed to assure quality before placement on the roadway.
   A) Select five (5) or more tabs at random from each lot or shipment and submit to the Materials and Tests Division to determine specification compliance.
   B) Select five (5) tabs and submit to the following test. Affix five (5) tabs at 600 millimeter intervals on an asphaltic pavement in a straight line. Using a medium size passenger vehicle or pickup, run over the markers with front and rear wheels at a speed of 35 to 40 miles per hour, four times in each direction. No more than one (1) out of five reflective surfaces shall be lost or displaced as a result of this test.
6. When dry, tabs shall be visible for a minimum distance of 60 meters during normal daylight hours and when illuminated by automobile low-beam headlight at night, unless sight distance is restricted by roadway geometrics.
7. No two consecutive tabs nor four tabs per 300 meters of line shall be missing or fail to meet the visual performance requirements of note 6.

REMOVABLE - PREFABRICATED PAVEMENT MARKINGS

1. Prefabricated Pavement Markings shall be a material of manufacture and product code or designation shown on list of approved materials covered by Materials and Tests Divisions Specification: D-9-8241.

NON REMOVABLE - PREFABRICATED PAVEMENT MARKINGS (FOIL BACK)

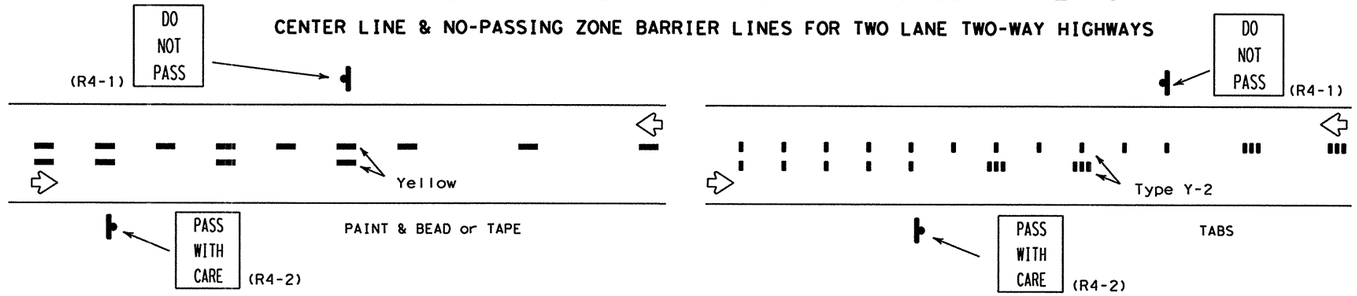
1. Prefabricated Pavement Markings shall be a material of manufacture and product code or designation shown on list of approved material covered by Specification TxDOT- 550-74-01.

RAISED PAVEMENT MARKERS

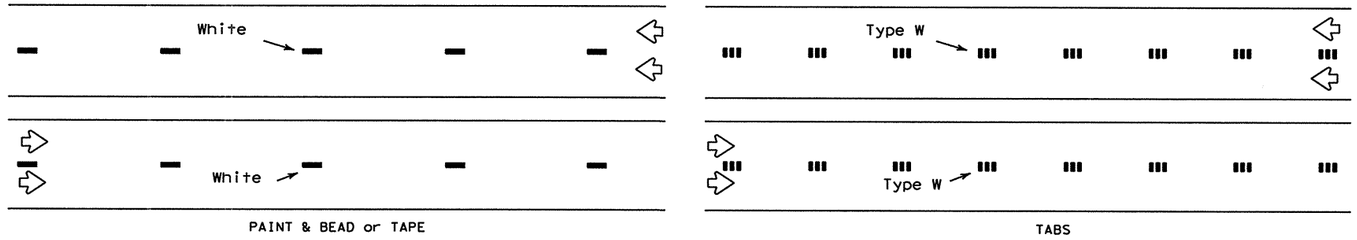
1. Raised pavement markers used to supplement short term removable pavement markings shall meet the requirements of Item "RAISED PAVEMENT MARKERS".

# WORK ZONE SHORT TERM PAVEMENT MARKINGS PATTERNS

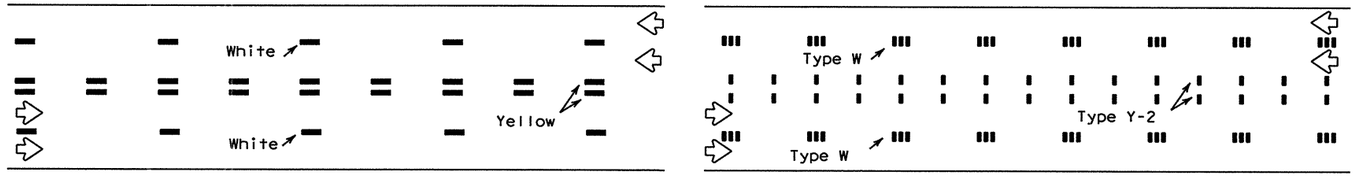
## CENTER LINE & NO-PASSING ZONE BARRIER LINES FOR TWO LANE TWO-WAY HIGHWAYS



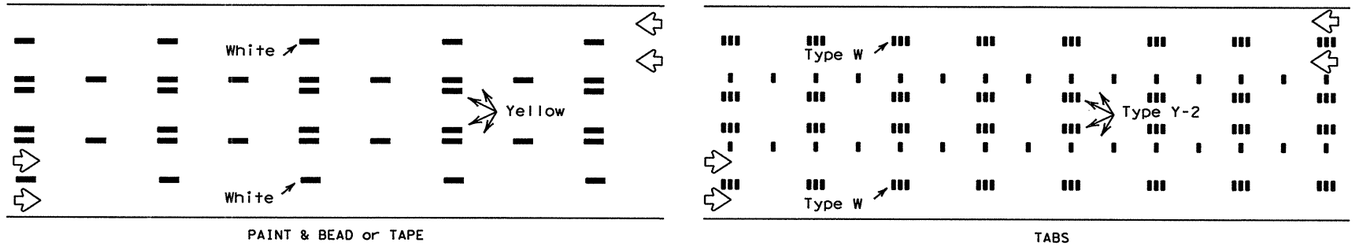
## LANE LINES FOR DIVIDED HIGHWAY

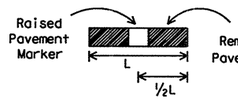


## LANE & CENTER LINES FOR MULTILANE UNDIVIDED HIGHWAYS



## TWO-WAY LEFT TURN LANE





If raised pavement markers are used to supplement REMOVABLE short term markings, the markers shall be applied to the top of the tape at the approximate mid length of the tape. This allows an easier removal of raised markers and tape.

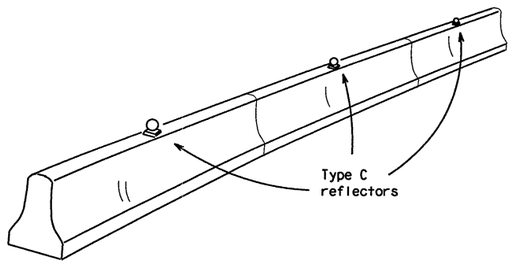
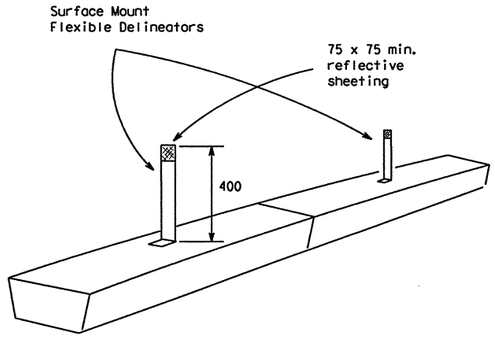
## CONCRETE TRAFFIC BARRIER (CTB)



NOTE:
Pavement markers or temporary flexible-reflective roadway marker tabs shall NOT be used as barrier delineation.

## LOW PROFILE CONCRETE BARRIER (LPCB)



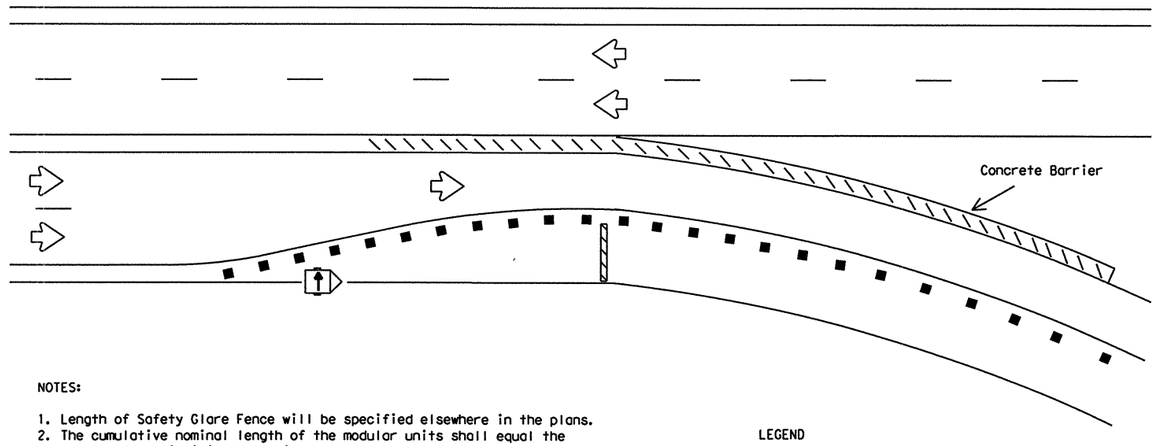
Barrier reflectors will be installed only on barriers designated for reflectorization as required elsewhere in the plans.

Reflectors should be mounted one reflector per section of barrier, preferably in the center.

Maximum spacing of reflectors is 12 meters for CTB and 6 meters for LPCB. Mount reflectors to barrier with construction adhesive or butyl rubber adhesive.

Color of barrier reflectors will conform to the Texas "Manual on Uniform Traffic Control Devices", (TMUTCD).

## BARRIER DELINEATION WITH SAFETY GLARE FENCE



NOTES:

1. Length of Safety Glare Fence will be specified elsewhere in the plans.
2. The cumulative nominal length of the modular units shall equal the length of the individual sections of temporary concrete traffic barrier on which they are installed so the joint between barrier sections will not be spanned by any one unit.
3. Panel/blades will be designed such that reflective sheeting conforming with Departmental Specification D-9-8300, Type C, minimum size of 50 by 300 mm can be attached to the edge of the panel/blade. The sheeting shall be attached to one panel/blade per section of concrete barrier not to exceed a spacing of 9 meters. Barrier reflectors are not necessary when panel/blades are installed.

Type C reflectors shall be prequalified and shall conform to the color and reflectivity requirements of Specification D-9-8600.

Color of Type C reflector will be the same as the nearest edge line, gore pavement marking or as directed by the Engineer.

Unless stated elsewhere in the plans, delineation and reflectors shown on this standard shall be considered subsidiary to the various bid items.

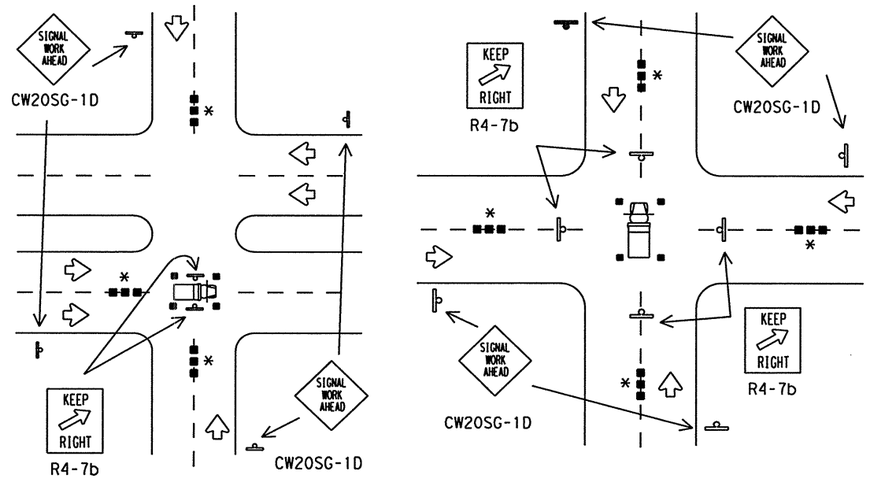
## TYPICAL DETECTOR INSTALLATION

OR OTHER WORK OPERATIONS THAT ARE SHORT TERM OR SHORT DURATION

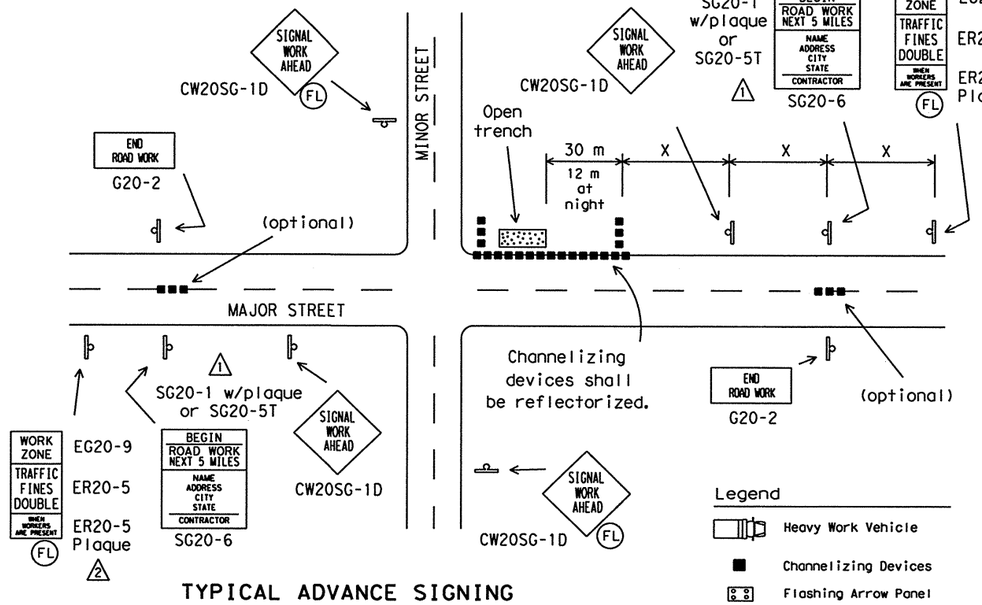
Nighttime Channelizing Devices shall be reflectorized.



## TYPICAL HANGING SIGNAL INSTALLATIONS

OR OTHER WORK OPERATIONS THAT ARE SHORT TERM OR SHORT DURATION

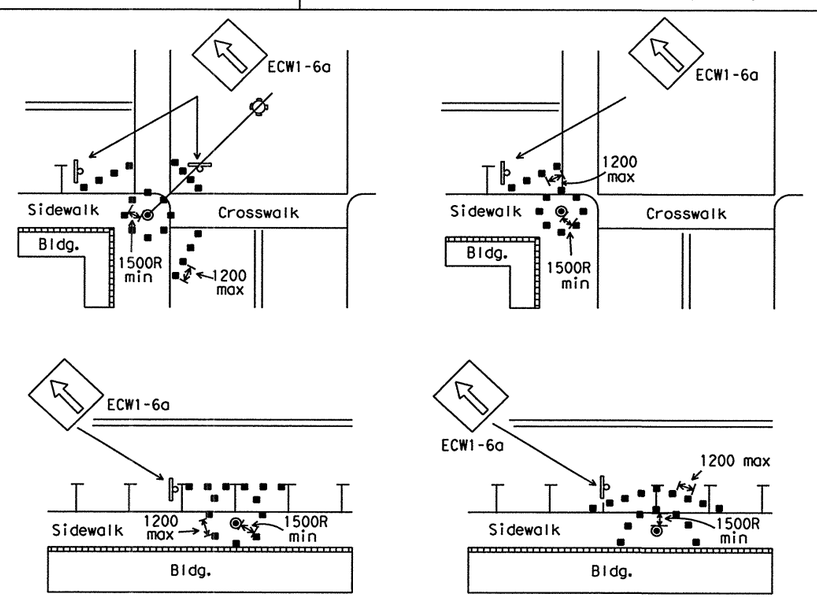
* Advance warning channelizing devices are optional.



## TYPICAL ADVANCE SIGNING

FOR LONG TERM and INTERMEDIATE-TERM STATIONARY WORK OPERATIONS

Observe Warning Signs State Law (R20-3) may be required if called for elsewhere in the plans.
Location will be as directed by the Engineer.



Channelizing devices should not be placed closer than 1500 mm radius (minimum) to signal poles.
Parking may be eliminated by placing channelizing devices in spaces.
If pedestrian walkways are blocked, refer to TMUTCD.

## TYPICAL RESTRICTED PEDESTRIAN MOVEMENTS

FOR ALL WORK OPERATIONS REGARLESS OF WORK DURATION

▲ The arrow panel may be omitted when stated elsewhere in the plans.

Typical channelizing device is the 700 mm cone. Plastic drums or vertical panels may be used if approved by the Engineer. Metal drums shall NOT be used as a channelizing device or sign support.

For several closely adjoining projects, advance signing may not be required in advance of each intersection, but only in advance of the intersections at the project limits. See details elsewhere in the plans for advance signing requirements.

Advance signs shall be in place when signal construction operations are in progress. The contractor shall remove advance signs when no construction operations are underway. Obstructions or hazards at the work area shall be clearly marked and delineated at all times.

All holes, trenches or other hazardous areas shall be adequately protected by lights or other protective devices. Trenches shall be covered or surrounded with orange plastic construction fence as directed by the Engineer.

Flagger and FCW20-7a sign may be required according to field conditions. Vehicles parked in roadway shall be equipped with two strobes. High level flags at corners of vehicle may also be used. Work operations that require work vehicle in traveled way 20 minutes or less may use cones, high level flags and strobes as advance warning devices. Cones should only be placed around vehicle. Flaggers may be used on high speed rural intersections.

All dimensions are in millimeters unless otherwise noted.

Long-term / Intermediate-term Signs may be used in lieu of Short-term / Short Duration signing. Short-term / Short Durations signs shall be used only during daylight and removed at the end of the workday.

Regulatory signs shall be mounted at least 2.1 meters above the paved surface regardless of work duration.

**SIGN SUPPORT WEIGHTS**

Where sign supports require the use of weights to keep from turning over, the use of some type of sandbag is recommended. The use of pieces of rock, concrete, iron, steel or other solid objects will not be permitted. Sandbags shall only be placed along or upon the base supports of the device and shall not be suspended above ground level or hung with rope, wire, chains or other fasteners.

**REMOVING OR COVERING**

When sign messages may be confusing or no longer apply, the signs and supports shall be removed from roadway and shoulder, or the signs shall be completely covered. Turning signs from motorists view will not be allowed. When signs are covered the material used shall be opaque, such as heavy mil black plastic. Burlap shall not be used to cover signs. Signs shall be removed upon completion of the work.

Duct tape or other adhesive material shall not be affixed to sign face.

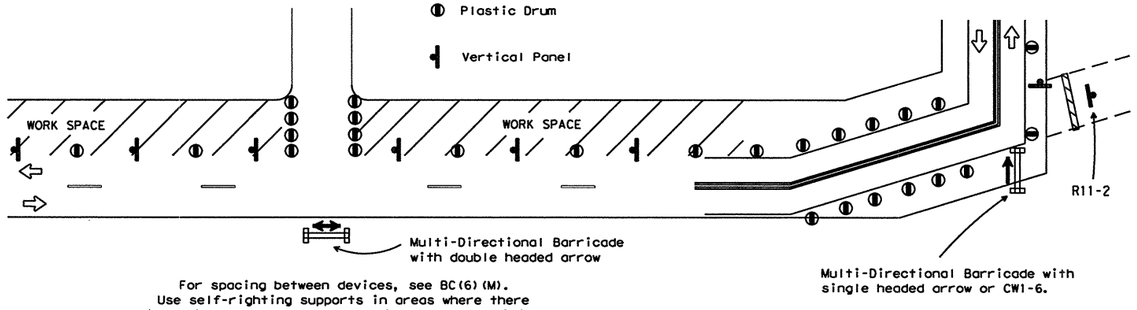
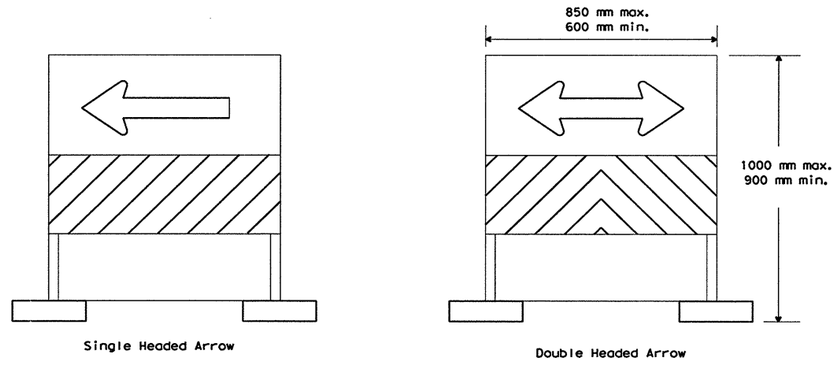
# CHANNELIZING DEVICES FOR URBAN ROADWAY TYPE PROJECT



For spacing between devices, see BC(6)(M).
Use self-righting supports in areas where there is a higher than normal potential for channelizing devices to be sruck.

# MULTI-DIRECTIONAL BARRICADE

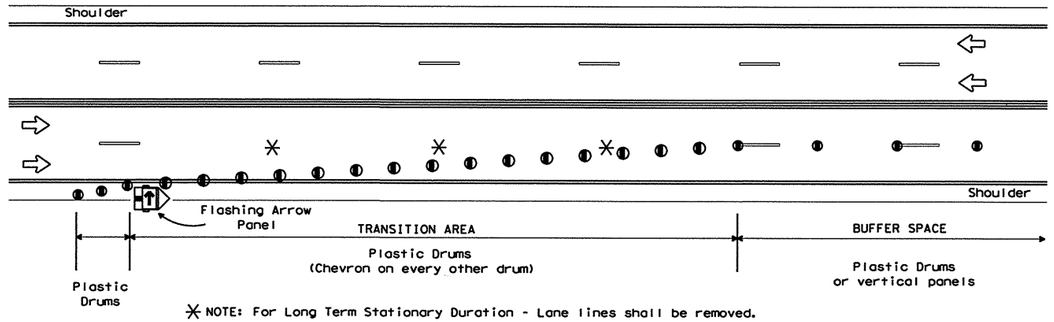


1. Multi-directional barricade shall not be used for lane closures.
2. May be used for sharp changes in alignment, or across roadway from stem of "T" intersection.
3. Typically used for Intermediate Term Stationary, Short Term Stationary or Short Duration work zone operations.

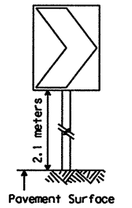
# CHANNELIZING DEVICES FOR LANE CLOSURE

## Multi-lane Undivided or Divided Highway

(Should be used for Long-term and Intermediate-term Stationary)
(May be used for Short-term Stationary)

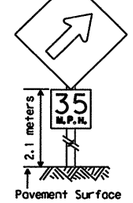


✳ NOTE: For Long Term Stationary Duration - Lane lines shall be removed.



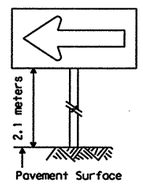
### CW1-8

The CHEVRON sign (CW1-8) may be used to replace roadside delineation on curves or used in transitions or tapers.



### ECW1-6a

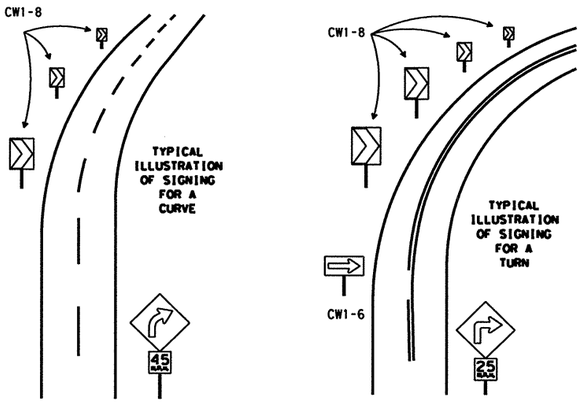
An UPWARD SLOPING ARROW sign (ECW1-6a) is intended to be used to indicate the beginning of a curve or transition. It should be preceded with an appropriate curve sign when needed, and should not be used throughout the curve or transition. Advisory speed plaque is optional.



### CW1-6

A LARGE ARROW sign (CW1-6) is intended to be used to give notice of a sharp change in alignment (turn) in the direction of travel. It should be preceded with an appropriate advance construction warning turn sign.

## USAGE OF CW1-6, ECW1-6a AND CW1-8 SIGNS



NOTES:

1. CW1-6, ECW1-6a & CW1-8 Signs shall be mounted on fixed supports.
2. CHEVRON alignment signs, when used, are erected on the outside of a curve, sharp turn or on the far side of an intersection, in line with and at right angles to approaching traffic. Spacing of the signs should be such that three are visible throughout the change in horizontal alignment.
3. For two-way traffic, use same arrangement of signs on outside of curve for each direction of travel.
4. Appropriate advance warning CURVE or TURN sign with Advisory Speed plaque should be used when needed.

## GENERAL NOTES

1. Additional details may be provided in the plans concerning sign size, type of channelization devices, sequence of work details, and required measures needed to control traffic during changes in the sequence of work.
2. All traffic control devices shall conform with the Texas "Manual on Uniform Traffic Control Devices for Streets and Highways" (TMUTCD), and shall be maintained as directed by the Engineer. Additional guidelines for traffic control devices may be found in the TMUTCD.
3. All distance and spacing shown on the TCP Standards are approximate.
4. All traffic control devices used during nighttime shall be reflectorized, illuminated from within or externally illuminated.
5. Additional information for fabrication, erection and usage of the following traffic control devices is found in the (TMUTCD) and Barricade and Construction (BC) Standards:

| | |
|---|---|
| BARRICADES | BC(2) and BC(3) |
| CONES | BC(6) |
| BARRIER DELINEATION | WZ(BD) |
| DRUMS | BC(5) |
| PAVEMENT MARKINGS | BC(5), BC(7) and BC(8)<br>WZ(STPM) or TCP(7-1) if applicable |
| SIGNS | BC(1), BC(2), BC(3), BC(4), BC(9), BC(9A), BC(9B) and BC(9C) |

6. Work area operations are defined as follows:
   Long-term stationary - Work that occupies a location more than 3 days.
   Intermediate-term stationary - Work that occupies a location overnight to 3 days.
   Short-term stationary - Daytime work that occupies a location from 1 to 12 hours.
   Short Duration - Work that occupies a location up to 1 hour.
   Mobile - Work that moves intermittently or continuously.

## SIGNS

1. Selection of sign size should be based on Table 1.
2. Flashing warning lights, channelizing devices and/or flags may be required to call attention to the advance warning signs.
3. The words UTILITY, SIGNAL, BRIDGE, LIGHTING, SIGN, STREET or RAMP may be substituted for ROAD in all signs where applicable.
4. Advisory speed plaques, if used in conjunction with warning signs, speeds shall be determined in the field by the Engineer.
5. Regulatory signs shall be mounted at 2.1 meter minimum mounting height.
6. Warning signs may be mounted on the approved types of supports at the minimum mounting heights as stated on BC(4):

## CHANNELIZING DEVICES

1. The maximum spacing between channelizing devices in a taper should be approximately equal in meters to the speed limit (S) x 0.3.
2. For intermediate term situations, when it is not feasible to remove and restore pavement markings, the channelization must be made dominant by using a very close spacing. This is especially important in locations of conflicting information, such as where traffic is directed over a double yellow centerline. In such locations a maximum channelizing device spacing of 3 meters is recommended. The 3 meter channelizing device spacing recommendation is intended for the area of conflicting information and not the entire work zone.
3. Channelizing device spacing should be reduced when placed on curves, hills or next to potential hazards. At least three channelizing devices should be in view at all times.
4. MERGING taper (lane closure with merging traffic) =L
   SHIFTING taper (traffic diverted to adjacent lane) =1/2 L
   SHOULDER taper (shoulder closed to traffic) =1/3 L
5. DOWNSTREAM taper usage is optional. When used it should be 30 meter minimum length per lane. Devices should be spaced at approximately 6 meter intervals.
6. ONE LANE, TWO-WAY taper is intended for a portion of the road controlled by STOP, YIELD traffic signals or flagger and used alternately by traffic in each direction. It should be 15-30 meter length with devices spaced at approximately 6 meter intervals.
7. Arrow panels used on two-way, two-lane roadways should flash in the four corner CAUTION display.

## WORKER SAFETY

1. Workers exposed to traffic should wear orange safety vests.
2. Work vehicles within 9 meters of the traveled way should have strobe lights or rotating beacons in use.
3. When work vehicles are used to shadow the work area, the vehicle should be parked 9 meters or more from the work area, transmission in gear (or set in PARK), emergency brake set on, and front wheels turned away from work area. Shadow vehicles shall be equipped with truck mounted attenuators.
4. Inactive work vehicles, including workers' private vehicles, should be parked away from the work area and as close to the right-of-way line as possible.

## FLAGGER CONTROL

1. Flagger shall wear orange safety vests. Flaggers should wear saftey hats to provide a professional image to the motorist and to protect the head from flying objects.
2. STOP/SLOW paddles shall be used as the primary method to control traffic by flaggers. The STOP/SLOW paddle minimum size is 450x450 mm. Paddles may be attached to a 1500 mm staff for easier handling. The larger size (600x600 mm) should be attached to a 1500 mm staff.
3. The 600 mm paddle should be used when the posted speed is 45 MPH or greater.
4. Flags are only used to control traffic for emergency situations and the STOP/SLOW paddles are not available. Flags shall be 600 mm square and securely fastened to a staff approximately 900 mm long.
5. Flaggers may carry hand held air horns to alert workers of an emergency condition.
6. For one lane two-way traffic control, one or more flaggers should be used where traffic density, road conditions or motorists' sight distance justify their use. If flaggers are used, the taper should be reduced to 15-30 meters. When flaggers are used to control traffic, the FLAGGER symbol sign (FCW20-7a) shall be used. When flaggers are used, the BE PREPARED TO STOP sign (CW20-7b) should be used. Proper spacing between signs should be maintained.
7. When flaggers are used to draw attention to traffic control devices, the FLAGGER symbol sign should be used. Proper spacing should be maintained.
8. When more than one flagger is used, a chief flagger should be assigned the responsibility of making decisions concerning traffic control.
9. The contractor has the option to use a flashing Stop/Slow Paddle conforming to Departmental Materials Specification D-9-8620.

GENERAL NOTES:

1. TRAIL, SHADOW, LEAD, and work vehicles shall be equipped with arrow panels as illustrated. The Engineer will determine if the LEAD VEHICLE and/or TRAIL VEHICLE are required based on prevailing roadway conditions, traffic volume, and sight distance restrictions.
2. All traffic control devices shall be in accordance with the "Texas Manual on Uniform Traffic Control Devices" (TMUTCD), latest edition.
3. The use of yellow rotating beacons or strobe lights on vehicles are required unless otherwise stated elsewhere in the plans.
4. The use of truck mounted attenuators (TMA) on the SHADOW VEHICLE and the TRAIL VEHICLE are required.
5. Optional striping on the back panel of all truck mounted attenuators shall be 200 mm red and white reflective sheeting placed in an inverted "V" design. Reflective sheeting shall meet or exceed the reflectivity and color requirements of DEPARTMENTAL MATERIAL SPECIFICATION D-9-8300, TYPE C.
6. Flashing Arrow Panels shall be Type B or Type C as per BC Standards. The panel operation shall be controlled from inside the vehicle.
7. Each vehicle shall have two-way radio communication capability.
8. When work convoys must change lanes, the TRAIL VEHICLE should change lanes first to shadow the other convoy vehicles.
9. Vehicle spacing between TRAIL VEHICLE and SHADOW VEHICLE will vary depending on sight distance restrictions. Motorists approaching the work convoy should be able to see the TRAIL VEHICLE in time to slow down and/or change lanes as they approach the TRAIL VEHICLE.
10. The LANE BLOCKED sign (FCW20-6) shall be used on divided highways and may be mounted on a truck or trailer. For divided highways with two lanes in each direction, the RIGHT or LEFT LANE CLOSED sign (CW20-5, 1200x1200) may be substituted for the LANE BLOCKED sign (FCW20-6).

GENERAL NOTES:

1. All traffic control devices illustrated are REQUIRED, except those denoted with the triangle symbol may be omitted when stated elsewhere in the plans.
2. Drums are the typical channelizing device. Cones or other devices may be used if approved by the Engineer. Drums shall be used during nighttime operations.
3. All construction signs and barricades placed during any phase of work shall remain in place until removal is approved by the Engineer.
4. The Engineer may direct the Contractor to furnish additional signs and barricades as required to maintain traffic flow and motorist safety during construction.
5. Static message board or changeable message signs stating the date and duration of ramp or freeway closure shall be placed a minimum of seven (7) calendar days in advance of actual closure.
6. High level warning flags should be used on advance warning signs during daytime operations. Warning lights may be used to add emphasis to advance warning signs during nighttime operations.
7. Duplicate construction warning signs should be erected on the median side of freeways where median width will permit and traffic volume justifies the signing.
8. The number of closed lanes may be increased provided the spacings of traffic control devices, taper lengths and tangent lengths meet the requirements of the TMUTCD.
9. Warning signs shown shall be appropriately altered for left lane closures.
10. The TCP details may require additional and/or relocation of route shields, guide signs, etc. to guide motorists along entire length of detour due to ramp and freeway closures.
11. See BC Standards for additional sign details.
12. When possible, changeable message signs should be located 150 meters in advance of the last available exit ramp prior to the lane closure to allow motorists an alternate route.

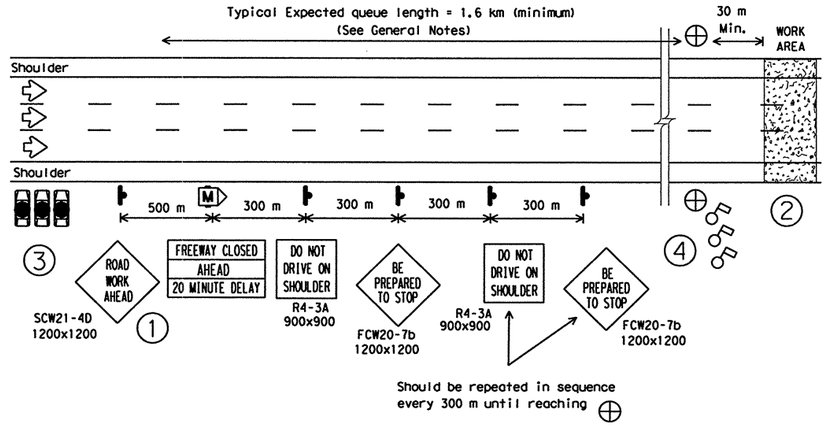
## STARTING POSITIONS



STARTING POSITION

① Traffic control devices should be installed or located near their intended position prior to beginning temporary roadway closure sequence. Duplicate signs should be erected on the median side of the roadway when median width permits and traffic density justifies the signing. To allow movement of workers, equipment, and law enforcement officer vehicles (LEOV), warning signs should not be placed on the shoulders.

② Prior to beginning the roadway closure sequence, all equipment, materials, personnel, and other items necessary to complete the work should be gathered near the work area. Entrance ramps located in area where queue is expected to build should be closed.

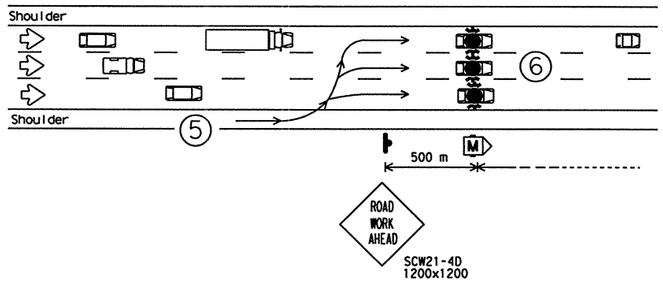
③ A minimum number of uniformed law enforcement officers and vehicles (LEOV) should be present:

| Number of Lanes | Minimum LEOV |
|---|---|
| 2 | 2 |
| 3 | 2 |
| 4 | 3 |
| 5 | 4 |
| 6 | 5 |

④ A minimum of one (1) flagger per lane is typically required for each lane of roadway to be closed. Flaggers should be placed at the CONTROL POSITION (CP) approximately 30 meters or more in advance of the work area. Use of the SLOW/STOP paddle is recommended. Flaggers should typically be at the CP as shown before the LEOV proceeds onto the roadway.

2

## REDUCING SPEED OPERATIONS



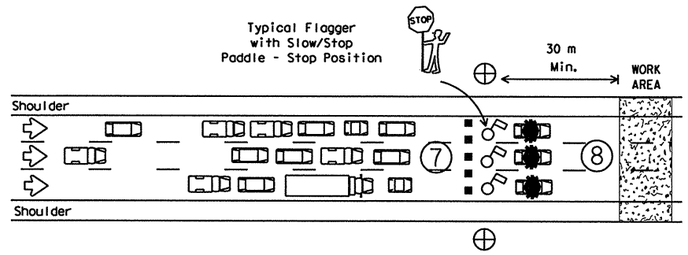
REDUCING SPEED OPERATION

⑤ Starting position of the LEOV should be in advance of the most distant warning sign(s).

⑥ Once the LEOV has achieved an abreast blocking formation while traveling toward the CP, emergency lights and headlights should be turned "ON". LEOV should maintain formation, not allow any traffic to pass, and begin to decelerate. LEOV should continue forward, gradually decelerating until all traffic is stopped at the CP as indicated by the flaggers.

3

## ALL TRAFFIC STOPPED AT CP



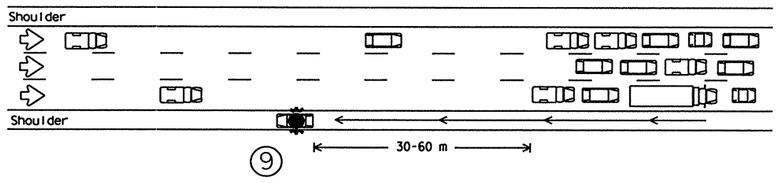
ALL TRAFFIC STOPPED AT THE CONTROL POSITION

⑦ Once the lead vehicles of traffic have stopped, CP flaggers may enter the roadway behind the LEOV and instruct traffic to remain stopped until further notice. Channelization devices may be placed in the travel lanes to prevent forward movement of traffic. Flaggers should face traffic and use the STOP paddle.

⑧ One LEOV should remain in the roadway at the CP, with emergency lights and headlights "ON", and maintain radio contact with WARNING LEOV.

4

## WARNING THE TRAFFIC QUEUE

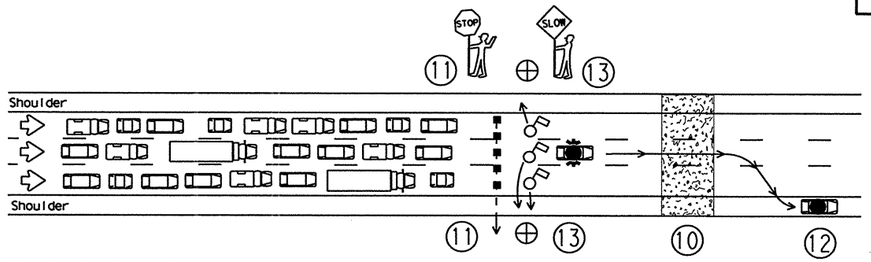


WARNING THE TRAFFIC QUEUE

⑨ The WARNING LEOV should proceed to the right shoulder of the roadway, with emergency lights and headlights "ON", and proceed 30-60 meters in advance of the traffic queue (stopped traffic) as the queue develops. When determined that limited sight distance situations may occur to motorists approaching the queue (crest of hills, sharp roadway curvatures, etc.), the WARNING LEOV may proceed 150-300 meters in advance of the queue.

5

## RELEASING STOPPED TRAFFIC



RELEASING THE STOPPED TRAFFIC

⑩ All equipment, materials, personnel, and other items should be removed from the roadway and maintain an adequate clear zone.

⑪ CP flaggers should remove channelization devices from the roadway, and remain on the shoulders with the STOP paddle facing traffic.

⑫ CP LEOV should move to the shoulder with emergency light and headlights "OFF".

⑬ CP flaggers should motion the traffic to proceed with the SLOW paddle facing traffic.

⑭ LEOV and flaggers should re-group at starting positions if necessary.

GENERAL NOTES

All traffic control devices shall conform with the Texas "Manual on Uniform Traffic Control Devices for Streets and Highways" (TMUTCD), latest edition, and any approved changes thereto. Additional guidelines for traffic control devices may be found in the TMUTCD. Signs conflicting with the roadway closure sequence should be completely covered or removed. Additional traffic control devices may be required for closure of access roads, cross streets, exit and entrance ramps as directed by the Engineer.

Flaggers, law enforcement officers, and workers should review and understand all procedures before roadway closure sequence begins. Local emergency services and media should have advance notification of roadway closure, expected dates and approximate times of closure(s).

Law enforcement officers shall be in uniform and have jurisdiction in the locale of the work area. An additional WARNING LEOV may be used on the median side of the roadway when median shoulder width permits (see ⑨).

Work should be limited to 20 minutes maximum duration. Roadway closure should be during off-peak hours, as shown in the plans, or as directed by the Engineer. If work is not complete within 20 minutes, or if the end of the traffic queue extends past the most distant advance warning sign, the work area should be cleared of all equipment, materials, personnel, and other items, and the roadway reopened. When the queue has dissipated and traffic flow appears normal, the roadway closure sequence may be repeated.

For traffic volumes greater than 1000 Passenger Car Per Hour Per Lane (PCPHPL), or for roadway closures that exceed the 20 minute maximum, see detail elsewhere in the plans.

When possible, changeable message signs should be located in advance of the last available exit prior to the lane closure to allow motorists the choice of an alternate route.

All dimensions are in millimeters unless otherwise noted.

## GENERAL NOTES

The traffic control devices detailed on this sheet will be furnished and erected as directed by the Engineer on sections of roadway where the surfacing operation has covered or obliterated existing pavement markings. These traffic control devices are to be used to supplement those required by BC Standards.

## "DO NOT PASS" SIGN (R4-1) and NO-PASSING ZONES

Prior to the beginning of construction, all currently striped no-passing zones should be signed with the DO NOT PASS sign (R4-1) and PASS WITH CARE sign (R4-2) placed at the beginning and end of each zone for each direction of travel except as otherwise provided herein. Signs marking these individual no-passing zones need not be covered prior to construction if the signs supplement the existing pavement markings.

At the discretion of the Engineer, in areas of numerous no-passing zones, several zones may be combined and signed as a single zone. If passing is to be prohibited over one or more lengthy sections, a DO NOT PASS sign and a NEXT XX MILES sign (R20-1) may be used at the beginning of such zones. The DO NOT PASS and NEXT XX MILES signs should be repeated every 1.6 km to the end of the no-passing zone. In areas where there is considerable distance between no-passing zones, the end of a no-passing zone may be signed with a PASS WITH CARE and NEXT XX MILES sign.

Depending on traffic volumes and length of sections, it may be desirable to prohibit passing throughout the project to prevent damage to windshields and lights. The DO NOT PASS and NEXT XX MILES sign should be used and repeated as often as necessary for this purpose. Where several existing zones are to be combined into one individual no-passing zone, the sign at the beginning of the zone should be covered until the surfacing operation has passed this location so as not to have the DO NOT PASS sign conflict with existing pavement markings. Also, unless one days operation completes the entire length of such combined zones, care must be taken to place DO NOT PASS and PASS WITH CARE signs in order to sign the beginning and end of the no-passing zones in the area where the surfacing operation has stopped for the day.

R4-1 and R4-2 signs should be mounted on fixed supports as detailed on BC Standards. These signs are to remain in place until standard pavement markings are placed.

## "NO CENTER STRIPE" SIGN (CW21-15)

At the time construction activity obliterates the existing centerline (low volume roads may not have an existing centerline), a NO CENTER STRIPE sign (CW8-12) should be erected at each end of the work area and just beyond major rural intersections and other location deemed necessary by the Engineer. Where possible, the signs erected at each end of the work area should be located in such a manner that drivers can read the sign and immediately see the change to no centerline. The NO CENTER STRIPE sign should be supplemented with the NEXT XX MILES sign (CW21-16) mounted below it.

The NO CENTER STRIPE sign should be erected as detailed on BC Standards. These signs are to remain in place until standard pavement markings are placed.

## "LOOSE GRAVEL" SIGN (ECW8-7)

When construction begins, a LOOSE GRAVEL sign (ECW8-7) should be erected at each end of the work area and repeated at intervals of approximately 3.2 km in rural areas and closer in urban areas. The LOOSE GRAVEL sign should be supplemented with the NEXT XX MILES sign (CW21-16) mounted below it.

The LOOSE GRAVEL sign should be erected as detailed on BC Standards. They should remain in place until the loose gravel condition no longer exists.

## PAVEMENT MARKINGS

Short term pavement markings for surfacing projects shall use Temporary Flexible-reflective Roadway Marker Tabs. Tabs are to be installed to provide true alignment for striping crews or as directed by the Engineer. Tabs will be placed at the spacing indicated. Tabs should be applied to the pavement no more than two (2) days before the surfacing is applied. After the surfacing is rolled and swept the cover over the reflective strip shall be removed. Tabs shall NOT be used to simulate edge lines.
