This railing may be constructed with slip-forms when shown on the plans or approved by the Engineer, with equipment approved by the Engineer. Sensor control for both line and grade must be provided. When slip-forming is used, the concrete may be cured with membrane curing compound.

Additional reinforcing may be tack welded to the upper two thirds of the reinforcing cage to provide bracing when slip-forming is used. Additional anchorage devices may be added when welding is necessary in the lower one third of the cage. Do not weld to U or S bars in the lower one third of the cage.

The back of railing shall be vertical unless otherwise shown in the plans or approved by the Engineer. Deformed welded wire fabric may be used as an option to conventional reinforcement and shall be made in accordance with ASTM A497 (Deformed Wire).

Welded Wire Fabric Detail shown is for MD55. longitudinal wires and MD54 vertical wires. Combinations of Reinforcing Steel and Welded Wire Fabric or configurations of Welded Wire Fabric other than shown will be permitted when the conditions in the table are satisfied and the dimension from end of section to first welded vertical wire does not exceed 75 mm.

Epoxy coat bars U and WU if slab bars are epoxy coated.

All dimensions are in millimeters unless otherwise shown.

Average mass of railing (with no overlay) is 560 kg/m.

## ABUTMENT WINGWALL PARTIAL PLANS (1)

### GENERAL NOTES:

This rail has been evaluated and accepted to be of equal strength to other safety-shaped railings with like geometry, which have been crash tested to meet NCHRP Report 350 TL-3 criteria and can be used for design speeds of 50 mph and greater.

All steel components except reinforcing shall be galvanized unless otherwise shown on plans. Epoxy coat bars U and WU if slab bars are epoxy coated.

All concrete for railing wall shall be Class "C".

All reinforcing steel shall be Grade 60. Deformed welded wire fabric may be used as an option to conventional reinforcement and shall be made in accordance with ASTM A497 (Deformed Wire). Welded Wire Fabric Detail shown is for D8.5 longitudinal wires and D8.3 vertical wires. Combinations of Reinforcing Steel and Welded Wire Fabric or configurations of Welded Wire Fabric other than shown will be permitted when the conditions in the table are satisfied and the dimension from end of section to first welded vertical wire does not exceed 3".

This railing may be constructed with slip-forms when shown on the plans or approved by the Engineer, with equipment approved by the Engineer. Sensor control for both line and grade must be provided. When slip-forming is used, the concrete may be cured with membrane curing compound.

Additional reinforcing may be tack welded to the upper two thirds of the reinforcing cage to provide bracing when slip-forming is used. Additional anchorage devices may be added when welding is necessary in the lower one third of the cage. Do not weld to U or S bars in the lower one third of the cage.

The back of railing shall be vertical unless otherwise shown on the plans or approved by the Engineer.

All parts of the railing including concrete parapet wall, MBGF Terminal Connections, bolts, nuts, washers, and reinforcing, are included in the price bid per linear foot of rail.

Shop drawings will not be required for this rail.

Average weight of railing (with no overlay) is 376 plf.

### MBGF TERMINAL CONNECTION SPECIAL NOTES:

Metal Beam Guard Fence shall be attached to the bridge rail and extend along the embankment using the Thrie-Beam Terminal Connection unless shown otherwise on the plans. The Thrie-Beam Terminal Connection shall be attached to the railing using 5 ~ 7/8" diameter A325 Hex Head Bolts, each with 2 ~ 1 3/4" O.D. washers. Place washer under each head and nut.

The 5 Terminal Connection Bolt Holes shall be 1" diameter holes perpendicular to the back face of the railing. Each Bolt Hole shall have a 2 1/2" diameter x 2" deep recess, as shown, when pedestrian sidewalks are adjacent to back of rail. Adjust placement of reinforcing steel as necessary to avoid bolt holes and recesses. Holes and recesses must be formed or cored. Percussion drilling is not permitted.

The 5 Terminal Connection Bolts shall be tightened in a well distributed pattern so to prevent damage or distortion of the Thrie-Beam Connection and the MBGF Transition. Bolts shall be cut off after installation so as to extend no more than 3/4" beyond nut. End of cut-off bolt shall be painted with Zinc-rich paint.

The splice between the Approach Guard Rail and the Terminal Connection shall be with the normal 12 Connection Bolts. The Terminal Connector shall receive the same protective coating as the attached Metal Beam Guard Fence.

METAL BEAM GUARD FENCE TRANSITION and METAL BEAM GUARD FENCE detail sheets must be referred to for additional details and information not shown herein.

(1) Refer to Bridge Layouts for determination of end treatment.

(2) See approach SSCB to determine if dowels V are to be used.

(3) Back of Rail Offset may, with Engineer's approval, be continued to the end of the Railing.

(4) Rail Joints shall be provided at ends of all spans and at equal intervals in between as necessary to maintain a 33' maximum and a 15' minimum length of unbroken wall (except on Abutment Wingwalls). Rail Joints shall be the same width as deck joint openings, except that Intermediate Rail Joints and Joints over deck construction joints shall be 1/4" minimum to 3/4" maximum in width. Joints shall be open if slab joint opening is not sealed. Joints over construction joints and over sealed deck joints shall be plugged. Forming material used in joints may be left in place if it is light in color and compressible, such as the following materials: polystyrene, molded cork granules, sponge rubber sheet, etc. If forming material is not left in place, the bottom 6" shall be plugged with slab joint sealing compound to prevent drainage and staining.

(5) Increase 2" for structures with overlay.

(6) See MBGF TERMINAL CONNECTION SPECIAL NOTES for additional information. Omit if Metal Beam Guard Fence is not used.

## RAIL DATA FOR HORIZONTAL CURVES

| | RADIUS TO FACE OF RAIL | MAX CHORD LENGTH | CONSTRUCT OR FABRICATE |
|---|---|---|---|
| Handrail | Over 840 m | 9.00 m | Straight rail sections |
| | Over 420 m thru 840 m | 4.50 m | ⑯ To required radius or to chords shown |
| | Over 210 m thru 420 m | 2.25 m | |
| | Thru 210 m | Zero | ⑯ To required radius |
| | | | |

⑯ Shop drawings required (may be submitted as 280 mm x 432 mm prints provided they are clearly legible).

For railing not requiring shop drawings, erection drawings showing handrail section lengths, post spacing, and anchor bolt setting shall be submitted to the Area Engineer for approval. If handrail requires shop and erection drawings, these drawings shall be submitted to the Bridge Engineer for approval.

GENERAL NOTES:

This rail has been successfully evaluated without handrail by full scale crash tests to meet NCHRP Report 230 SL-2 criteria.

Rail Type C202(M) is comprised of the following parts: concrete parapet, concrete posts, concrete above wingwall, all reinforcing shown, including that embedded in the slab or wingwalls, water barrier, Terminal Connector, handrail, CIP pipe and all anchorage provisions including bolts, nuts and washers. All these parts are included in price bid per meter of rail.

All steel components except reinforcing shall be galvanized unless otherwise shown on plans.

All concrete shall be Class C. Chamfer all exposed corners.

Epoxy coat Bars V, W and U if slab bars are epoxy coated.

All reinforcing shall be grade 420 except spirals.

Anchor bolts shall be ⅝" Dia ASTM A307 Grade A bolts (or A36 threaded rods with one tack welded hex nut each) with one hex nut and one hardened steel washer at each bolt. Threaded rods may be 0.557" minimum diameter with rolled threads. Nuts shall conform to A563 requirements. The untapped blanks shall be galvanized prior to cutting the threads. Threads for bolts and nuts shall have Class 2A and 2B fit tolerances in accordance with ANSI B1.1.

Face of rail, posts and parapet shall be vertical transversely unless otherwise approved by the Engineer. Handrail posts and opening end faces shall be perpendicular to top of adjacent concrete parapet grade. Grout may be used under handrail post base plates if necessary.

Water barriers shall be provided at openings draining onto undercrossing roadways and sidewalks. They may be cast-in-place or precast in convenient lengths and bonded to the bridge deck with an approved epoxy cement.

Only one handrail option shall be used throughout an entire project.

Handrail sections shall include not less than two posts nor more than four (except at Abutments).

Exposed edges of handrail and handrail posts shall be rounded or chamfered to approximately 2 mm by grinding.

All dimensions are in millimeters unless otherwise shown.

Average mass of railing: 304 kg/m ~ Conc (with no Overlay)
18 kg/m ~ Steel (Std Pipe option)

(14) 2 ½" Std Pipe (2.875" O.D., 0.203" wall thickness)

(15) 2" Std Pipe (2.375" O.D., 0.154" wall thickness)

**GENERAL NOTES:**

This rail, without the handrail, has been successfully evaluated by full-scale crash tests to meet NCHRP Report 350 TL-3 criteria. However, its use is limited to design speeds of 45 mph or less because the handrail presents an occupant compartment intrusion threat to high speed vehicular traffic.

Rail Type C203 is comprised of the following parts: concrete parapet, concrete posts, concrete above wingwall, all reinforcing shown, including that embedded in the slab or wingwalls, water barrier, MBGF connections, handrail, CIP pipe and all anchorage provisions including bolts, nuts and washers. All these parts are included in price bid per linear foot of rail.

All steel components except reinforcing shall be galvanized unless otherwise shown on plans.

All concrete shall be Class C. Chamfer all exposed corners. Epoxy coat Bars V and U if slab bars are epoxy coated.

All reinforcing shall be grade 60 except spirals.

Anchor bolts shall be ⅝" Dia ASTM A307 Grade A bolts (or A36 threaded rods with one tack welded hex nut each) with one hex nut and one hardened steel washer at each bolt. Nuts shall conform to A563 requirements. The untapped blanks shall be galvanized prior to cutting the threads. Threads for bolts and nuts shall have Class 2A and 2B fit tolerances in accordance with ANSI B1.1.

Pipe for handrail shall conform to ASTM A53 Grade B or A501.

Face of rail, posts and parapet shall be vertical transversely unless otherwise approved by the Engineer. Handrail posts and opening end faces shall be perpendicular to top of adjacent concrete parapet grade. Grout may be used under handrail post base plates if necessary.

Water barriers shall be provided at openings draining onto undercrossing roadways and sidewalks. They may be cast-in-place or precast in convenient lengths and bonded to the bridge deck with an approved epoxy cement.

Handrail sections shall include not less than two posts nor more than four (except at Abutments).

Exposed edges of handrail and handrail posts shall be rounded or chamfered to approximately 1/16" by grinding.

Average weight of railing: 250 plf ~ Conc
12 plf ~ Steel

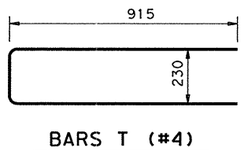
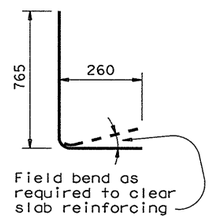
# METAL BEAM GUARD FENCE TERMINAL CONNECTOR DETAILS

## Terminal Connector Notes:

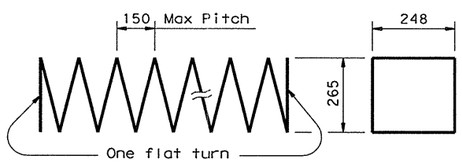
Metal Beam Guard Fence shall be attached to the Rail and extended along the embankment unless shown otherwise on the plans. See the Layout sheets for details and lengths for payment. The splice between the Approach Guard Rail and the Terminal Connector shall be with the normal 8 bolts. The Terminal Connector shall receive the same protective coating as the attached Metal Beam Guard Fence.



BARS T (#4)

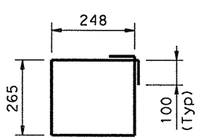


BARS L (#4)



If two or more SP bars are used in a continuous panel length, they shall be butted within the center 900 mm of a rail post. At the Contractor's option, Bars S spaced at 150 mm may be substituted for spiral Bars SP.

BARS SP (MW25) ASTM A82



BARS S (#3)

## GENERAL NOTES:

This rail has been successfully evaluated by full-scale crash tests to meet NCHRP Report 350 Test Level 3 (TL-3) criteria. (Note that the transition attachment is currently under development and testing.)

Reinforcing for the railing shall be Grade 420, except spirals. Bar splices shall be a minimum of 24 times the nominal diameter of the bar. All concrete shall be Class "C". Chamfer all exposed corners (either 38 mm x 19 mm or 19 mm x 19 mm chamfers may be used).

The axis of the traffic railing shall be vertical, except where the roadway is superelevated the axis shall be normal to roadway surface. Openings shall have end faces perpendicular to adjacent roadway grade.

The rail is comprised of the following listed parts: concrete parapet, concrete posts, all reinforcing shown (including that embedded in the slab, wingwalls, or retaining walls), water barrier, MBGF connections, and all anchorage provisions (including bolts, nuts and washers). All these parts are included in the price bid per linear foot of rail.

Water barriers shall be provided at openings as shown elsewhere in the plans. Such water barriers shall normally be placed at openings draining onto undercrossing roadways and sidewalks. They may be cast-in-place or precast in convenient lengths and bonded to the foundation with an approved epoxy cement.

All steel components, excepting reinforcing, shall be galvanized unless otherwise shown on plans.

Average mass of this railing is 370 kg per linear meter.

Shop drawings will not be required for this rail.

**GENERAL NOTES:**

This rail has been successfully evaluated by full-scale crash tests to meet NCHRP Report 350 TL-3 criteria and can be used for design speeds of 50 mph and greater.

Rail Type T203 is comprised of the following parts: concrete parapet, concrete posts, concrete above wingwall, all reinforcing shown, including that embedded in the slab or wingwalls, water barrier, MBGF connections, and all anchorage provisions including bolts, nuts and washers. All these parts are included in price bid per linear foot of rail.

All steel components, except reinforcing, shall be galvanized unless otherwise shown on plans.

All concrete shall be Class "C". Chamfer all exposed corners.

Epoxy coat Bars V and U if slab bars are epoxy coated.

All reinforcing shall be Grade 60 except spirals.

Face of rail and parapet shall be vertical transversely unless otherwise shown in the plans or approved by the Engineer. Openings shall have end faces perpendicular to adjacent roadway grade.

Water barriers shall be provided at openings draining onto undercrossing roadways and sidewalks. They may be cast-in-place or precast in convenient lengths and bonded to the bridge deck with an approved epoxy cement.

Shop drawings will not be required for this rail.

Average weight of railing with no overlay is 250 plf.

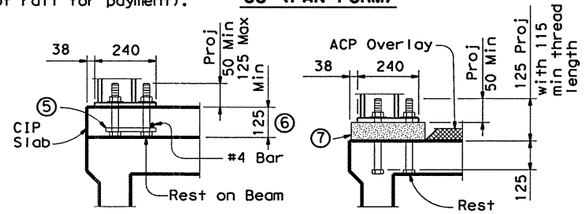
⑥ For CIP slabs under 150 mm add PL (tack weld to bolt heads) and an additional longitudinal #4 bar as shown (included as part of rail for payment).

CG (PAN FORM)



BOX BEAM

⑦ A 152 x 240 mm min x 75 mm max thickness grout pad may be used under the rail post base plate to adjust the rail for vertical grade and box beam camber.

GENERAL NOTES:

Designed according to current AASHTO Standard Specifications for Highway Bridges.

Pipe for railing shall be Std Pipe (ASTM A-53) (E or S Grade A or B).

All anchor bolts, nuts, washers and bottom plates to be included in unit price bid for railing.

Panel lengths of railing shall be attached to a minimum of three posts except at abutment wingwalls.

All steel components to be galvanized unless otherwise shown in plans.

Anchor bolts shall be ⅝" Dia ASTM A307 Grade A bolts (or A36 threaded rods with one tack welded nex nut each) with one hex nut and one 1 ¾" O.D. hardened steel washer at each bolt. Threaded rods may be 0.557" minimum diameter with rolled threads. Nuts shall conform to to A563 requirements. The untapped blanks shall be galvanized prior to cutting the threads. Threads for bolts and nuts shall have Class 2A and 2B fit tolerances in accordance with ANSI B1.1.

Face of rail and posts shall be vertical transversely unless otherwise approved by the Engineer. Posts shall be perpendicular to adjacent roadway grade. Grout may be used under base plates if necessary.

Shop drawings to be submitted to the Bridge Engineer for approval will be required only for rails on horizontal curves in which case the rail members shall be fabricated to the required radius for radii of 183 meters or less. For rails not requiring shop drawings, erection drawings showing panel lengths, splice locations, rail post spacing and anchor bolt setting shall be submitted to the Area Engineer for approval.

Shop drawings may be submitted as 280 mm x 432 mm prints provided they are clearly legible.

Exposed edges of handrail and handrail posts shall be rounded or chamfered to approximately 2 mm by grinding.

All dimensions are in millimeters unless otherwise shown.

Average mass of railing is 45 kg/m.

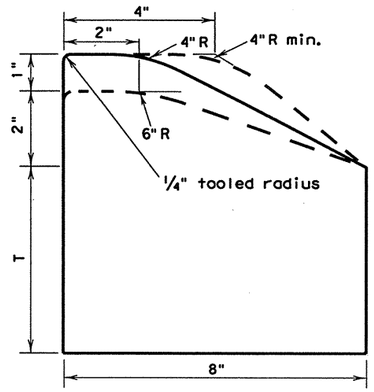
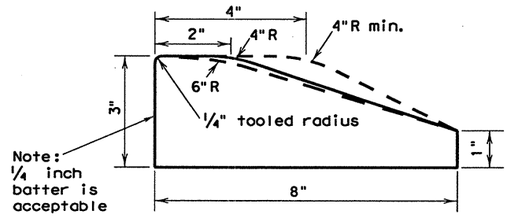
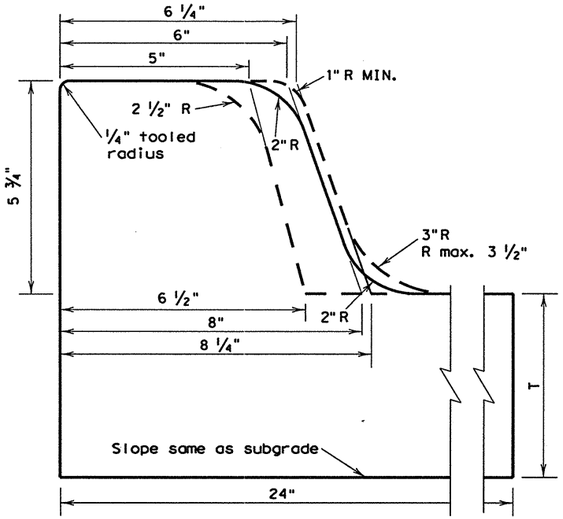
TYPE I CURB AND GUTTER



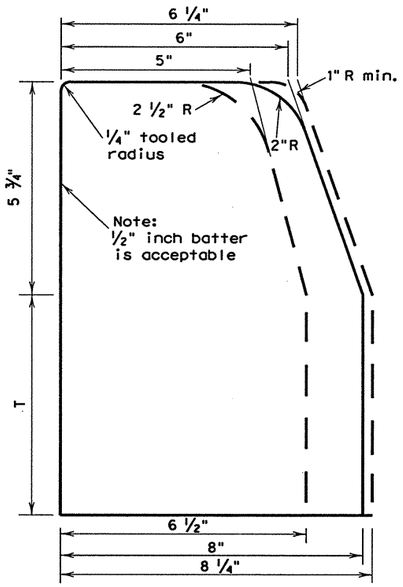
TYPE I CURB



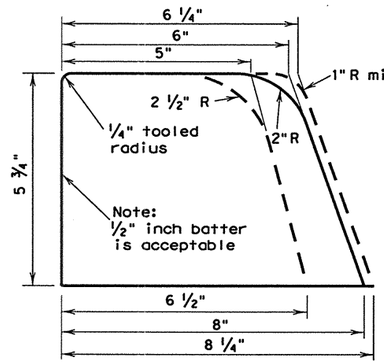
TYPE I MONO CURB OR CURB PLACED ON PAVEMENT



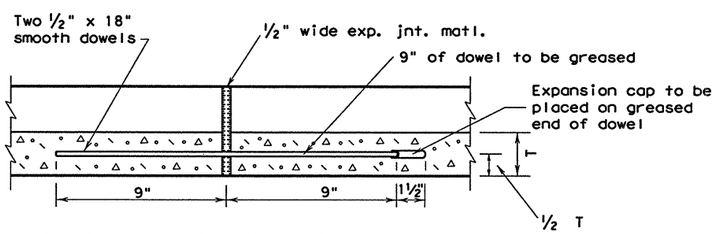
TYPE II CURB AND GUTTER



TYPE II CURB



TYPE II MONO CURB OR CURB PLACED ON PAVEMENT



Longitudinal section thru curb and gutter showing typical expansion joint details.

Reinforcing steel (when used) shall not cross expansion joints. Steel shall be terminated 3" ± 1" from face of the joint.

## GENERAL NOTES

1. Contractor may use existing forms if the cross section lies within the band shown by dotted lines. If new forms are to be purchased, leased, or constructed they shall conform to the solid line.
2. When reinforcing steel is required or placed at contractor's option, one of the following schemes of reinforcement shall be required. The manner of placement and location shall be to the satisfaction of the Engineer.
   a. Type I, or Type II, curb and gutter reinforcement shall have longitudinal reinforcing bars as follows: three #3, two #4, two #5, or one #6.
   b. All types of curb (reinf.) shall have one #3 or #4 bar for for longitudinal reinforcement.
3. Reinforcing bars shall be lapped a minimum of 15".
4. When curb or curb and gutter is placed by a separate pour adjacent to or atop concrete pavement, curb or curb and gutter shall be tied to pavement in a manner satisfactory to the engineer with 8-inch long #3 or #4 bars spaced at 5 feet and expansion and/or contraction joints of curb or curb and gutter shall match those of pavement.

   When curb and curb and gutter is not constructed adjacent to concrete pavement, the following shall govern:
   a. Reinforced curb or curb and gutter shall have no contraction joints.
   b. Non-reinforced curb or curb and gutter shall have formed, tooled or sawed contraction joints at 10'±. The depth of these joints shall be sufficient to ensure cracking at the joints.
   c. Reinforcing curb or curb and gutter shall have expansion joints at points of curvature and at intervals no greater than 120' in all curves and at structures such as bridges, box culverts, curb inlets, etc.
   d. Non-reinforced curb or curb and gutter shall have expansion joints at points of curvature on curves of radius less than 25' and at structures such as bridges, box culverts, curb inlets, etc.
5. One-half inch expansion joint material shall be provided where curb or curb gutter is adjacent to sidewalk or riprap.
6. Unless otherwise shown, transitions between curbs or curbs and gutters of differing cross section shall be accomplished over a 20 foot length or as approved by the Engineer.
7. At contractor's option, dimension "T" may be thickness of pavement structure. In no case shall it be less than 6".
8. See the RAMP standard sheet for information on curb ramps and sidewalks crossing driveways.

DISCLAIMER:
The use of this standard is governed by the "Texas Engineering Practice Act". No warranty of any kind is made by TxDOT for any purpose whatsoever. TxDOT assumes no responsibility for the conversion of this standard to other formats or for incorrect results or damages resulting from its use.

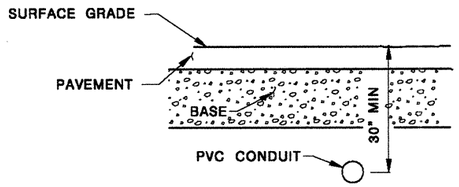
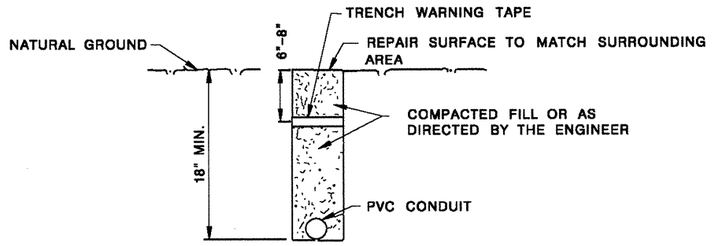
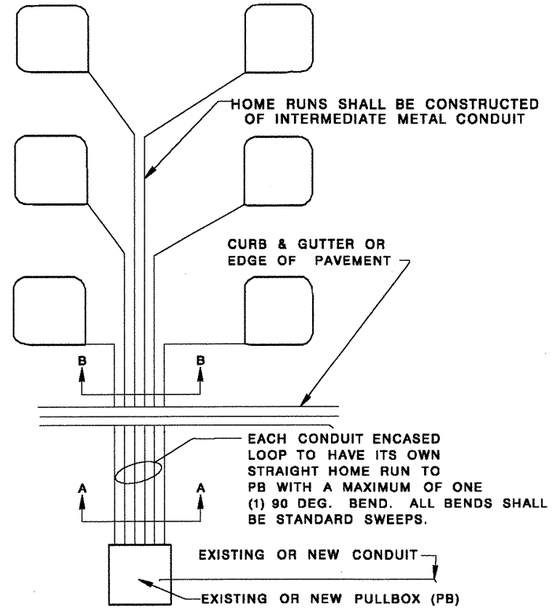
## CONDUIT TRENCHED IN STREET



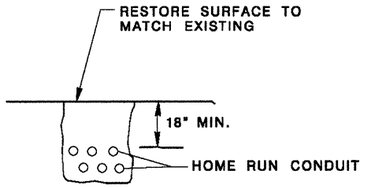
## CONDUIT BORED UNDER PAVEMENT



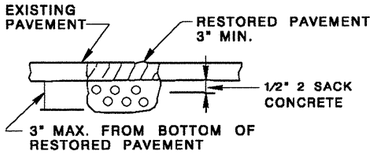
## CONDUIT OUTSIDE STREET



## CONDUIT ENCASED LOOP DETAILS



## SECTION A–A

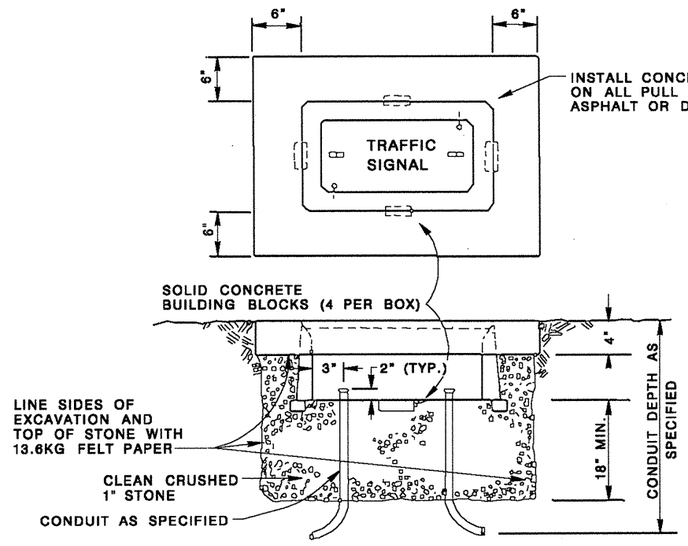


## SECTION B–B

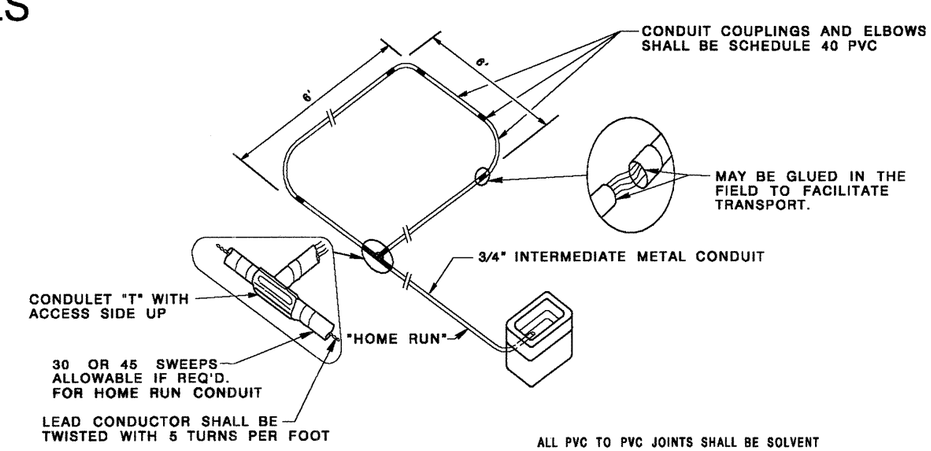
### LOOP NOTES

ALL CONNECTIONS BETWEEN THE LOOP WIRE AND SHIELDED LEAD-IN CABLE SHALL BE MADE AS FOLLOWS

A) TIN THE WIRES WITH SOLDER.
B) MAKE A BUTT CONNECTION BETWEEN THE WIRES WITH A TINNED COPPER COMPRESSION FITTING.
C) JOIN THE WIRES AND FITTING WITH SOLDER IN A COMPLETE AND ACCEPTABLE MANNER.
D) TAPE THE CONNECTION WITH AN ACCEPTABLE ELECTRICAL TAPE.
E) SEAL THE CONNECTION IN A RE-ENTERABLE ENCAPSULATING SPLICE KIT.



## TYPICAL PULLBOX INSTALLATION DETAIL



ALL PVC TO PVC JOINTS SHALL BE SOLVENT WELD CONNECTED AND WATERPROOF.

1.) CONTRACTOR SHALL INSTALL CONDUIT ENCASED LOOPS AT THE LOCATIONS SHOWN ON THE PLANS USING 3/4" DIAMETER PVC SCHEDULE 40 CONDUIT OR AT NO ADDITIONAL COST 1" DIAMETER PVC SCHEDULE 80 CONDUIT.
2.) LOOP LOCATIONS MAY BE STAGGERED SLIGHTLY (+/–6") TO ACCOMODATE HOME RUN PLACEMENT.
3.) INDIVIDUAL HOME RUN CONDUITS SHALL BE EXTENDED TO THE PULL BOX SHOWN ON THE PLANS FOR EACH LOOP INSTALLED.
4.) ALL LOOP AND HOME RUN CONDUIT SHALL BE PLACED IN COMPACTED SUBGRADE MATERIAL AT 4" TO 6" DEEP AND ALL ROCKS, PROTUSIONS OR IRREGULARITIES WHICH MAY DAMAGE. THE CONDUIT SHALL BE REMOVED.
5.) THE CONTRACTOR SHALL BE RESPONSIBLE TO DEVISE HIS OWN METHOD FOR EXCAVATING FOR LOOPS. ALL AREAS DISTURBED BY THE CONTRACTOR'S OPERATION SHALL BE RESTORED TO THEIR ORIGINAL CONDITION.
6.) ALL LOOPS SHALL BE WOUND FOUR TIMES IN A COUNTER CLOCKWISE DIRECTION.

**NOTES:**

1.) LOOP WIRE TO BE A CONTINUOUS RUN WITH NO SPLICES TO PULL BOX OR POLE MOUNT SPLICE BOX.

2.) EACH LOOP TO BE A SEPARATE RUN.

3.) UNLESS OTHERWISE SPECIFIED ALL LOOPS TO TAKE 4 TURNS.

4.) THE PAVEMENT CUT IS TO BE MADE WITH A CONCRETE SAW TO NEAT LINES AND LOOSE MATERIAL REMOVED. THE CUT SHALL BE CLEAN AND DRY WHEN THE WIRE AND SEALING COMPOUND IS PLACED.

5.) WIRE FROM THE LOOP TO THE PULLBOX SHALL BE TWISTED A MINIMUM OF FIVE TURNS PER FOOT, NO SPLICES SHALL BE PERMITTED IN THE LOOP OR IN THE RUN TO THE PULLBOX.

6.) THE HOME RUN CABLE FROM THE PULLBOX TO THE CONTROLLER SHALL BE SOLDERED TO THE LOOP WIRE, THE SOLDER JOINTS SHALL BE SEALED WITH AN ENCAPSULATOR RESIN. ENDS OF WIRE TUBE TO BE SEALED.

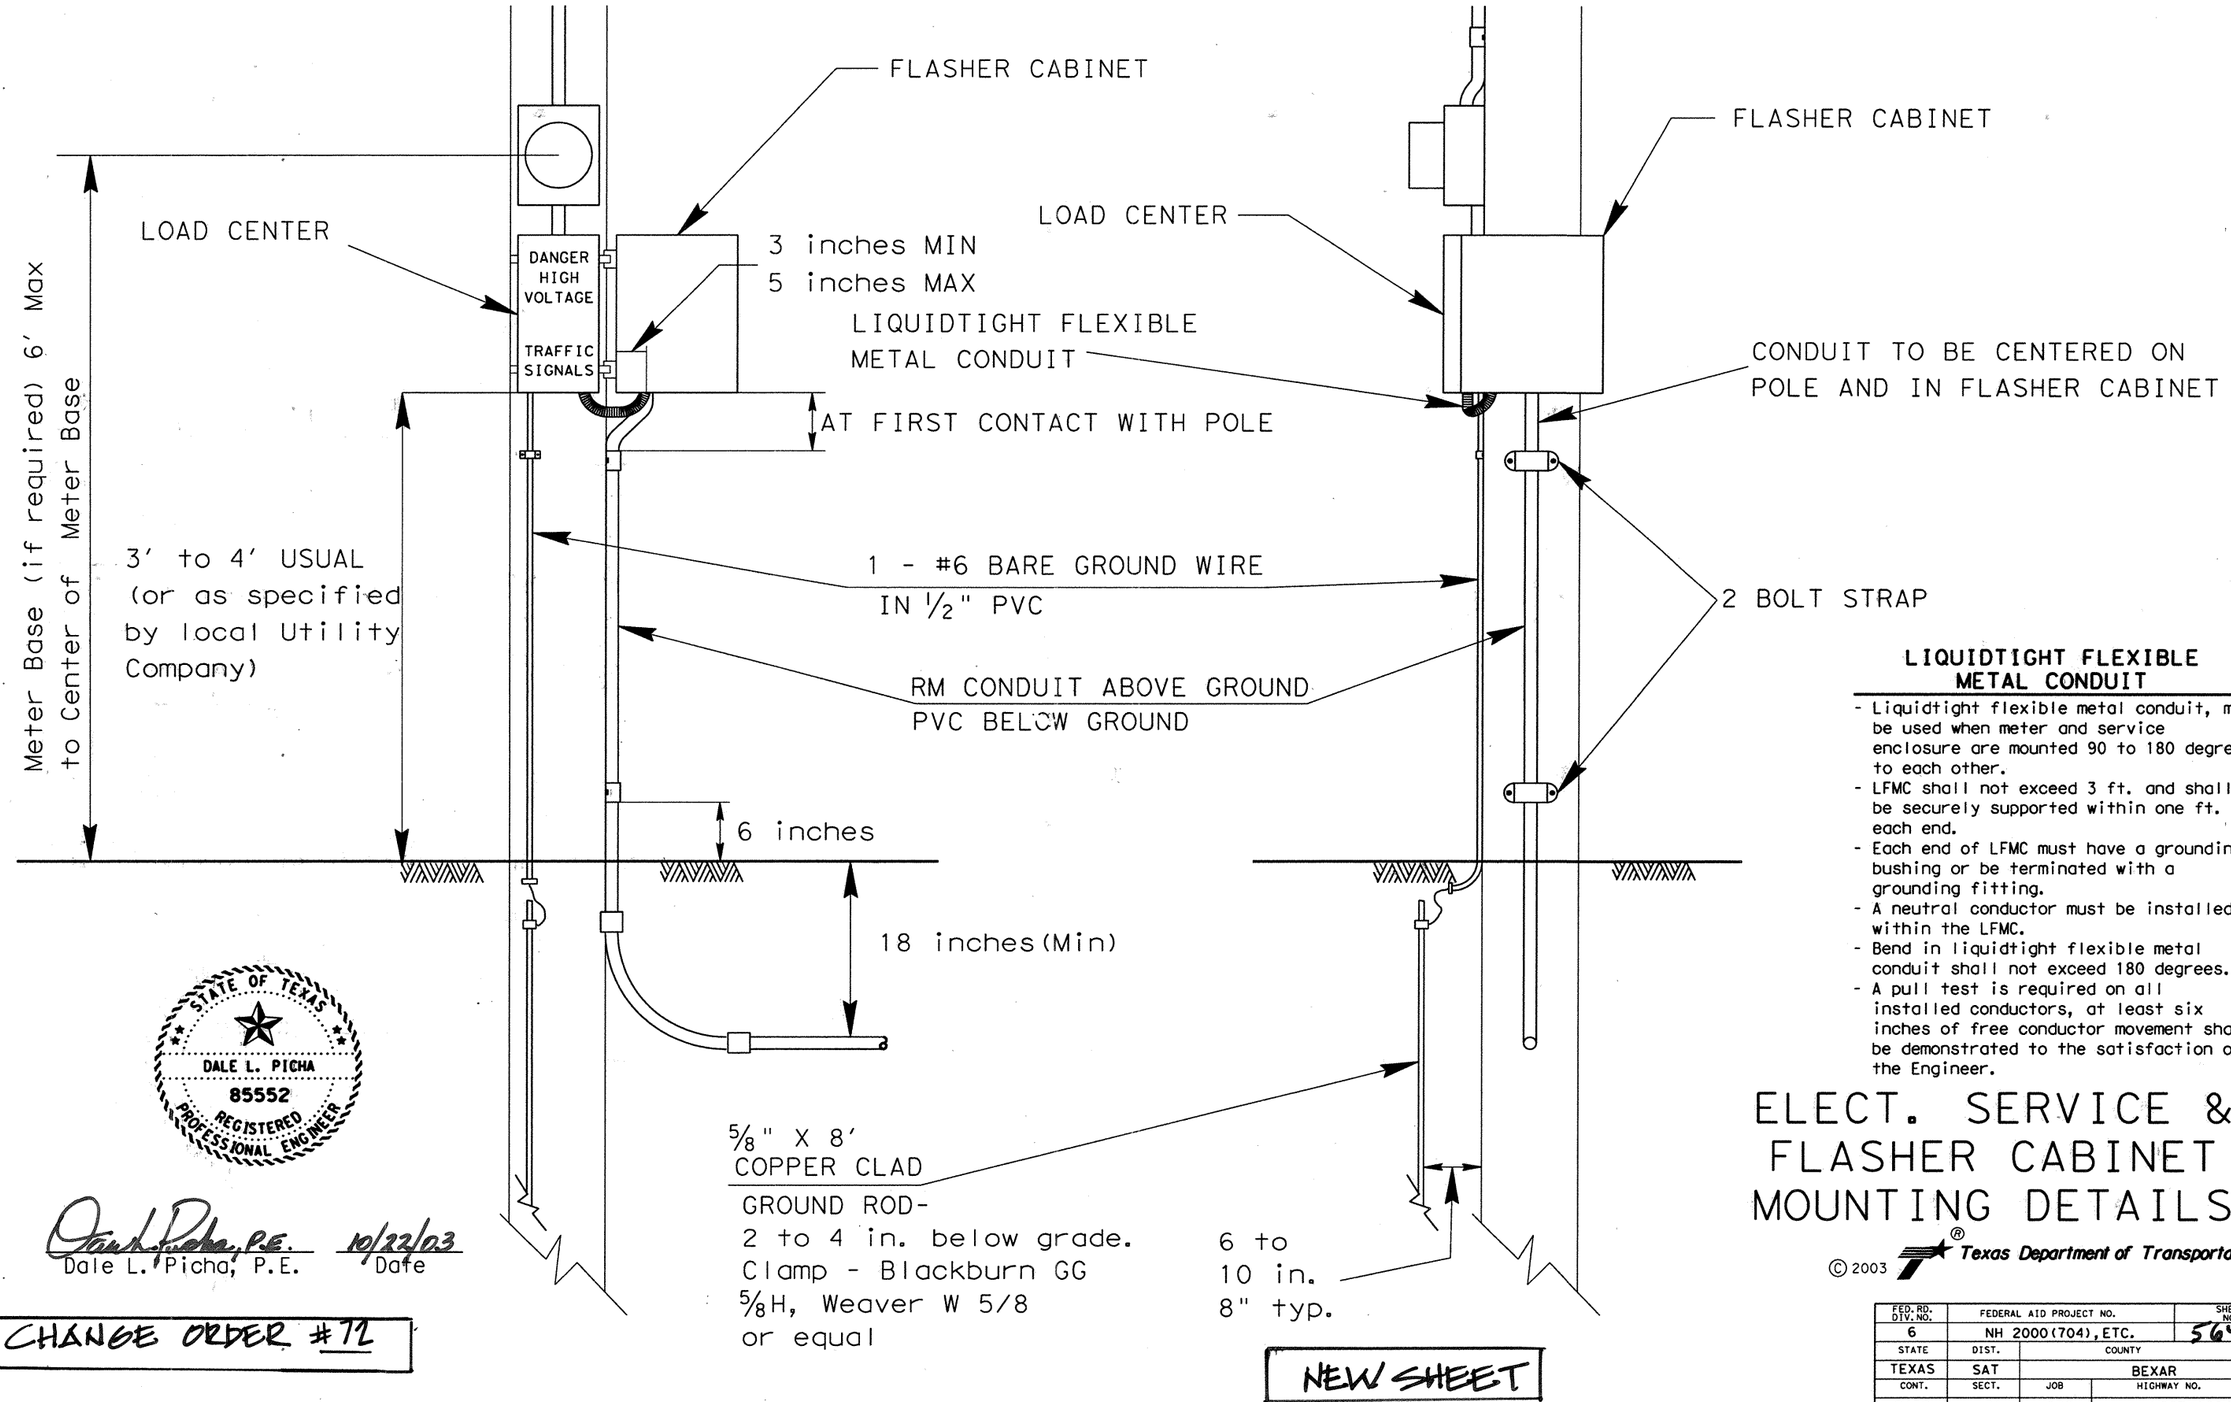
PLAN



**LIQUIDTIGHT FLEXIBLE METAL CONDUIT**

- Liquidtight flexible metal conduit, may be used when meter and service enclosure are mounted 90 to 180 degrees to each other.
- LFMC shall not exceed 3 ft. and shall be securely supported within one ft. of each end.
- Each end of LFMC must have a grounding bushing or be terminated with a grounding fitting.
- A neutral conductor must be installed within the LFMC.
- Bend in liquidtight flexible metal conduit shall not exceed 180 degrees.
- A pull test is required on all installed conductors, at least six inches of free conductor movement shall be demonstrated to the satisfaction of the Engineer.

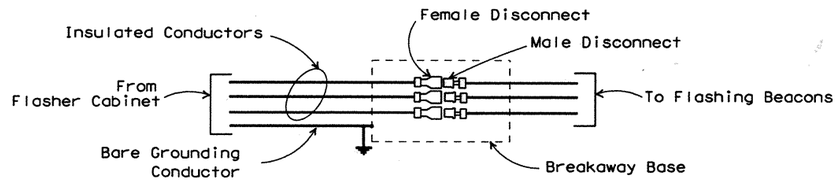
## LOWER BEACON MOUNTING DETAIL

(See Note 6)



## BREAKAWAY IN-LINE FUSEHOLDERS

New Sheet
CHANGE ORDER #72

NOTES:

1. The Roadside Flashing Beacon Assembly is designed for small signs where electrical power is needed with a breakaway sign pole, (e.g. warning signs or school zone signs). See signing layouts for actual sign to be installed.
2. Details depicted herein show a typical warning sign with two flashing beacon heads.
3. See SMD Standard sheets for lateral and vertical clearances and sign mounting details.
4. See Special Specification, "Roadside Flashing Beacon Assembly" for further requirements.
5. All electrical connectors for breakaway poles shall be water tight breakaway fuseholders (Buchannan 65U, Bussmann HEBW, Littelfuse LEB, or equal). All electrical connections for neutrals shall be breakaway and shall have a white color marking and a permanently installed solid neutral (Buchannan 20U, Bussmann HET, littelfuse LET, or equal). Fuses shall be 10 amp time delay.
6. Beacon heads and mounting shall be as shown elsewhere on the plans or, when no other details are shown, shall be as shown here or as otherwise approved by the Engineer.
7. Conduit in foundation and within 150 mm of foundation is subsidiary to the Item, "Roadside Flashing Beacon Assembly."
8. Unless otherwise shown on the plans, pole shaft shall be schedule 40 Aluminum pipe, alloy 6061-T6 only. Aluminum conduit will not develop the necessary strength and will not be allowed. When specifically shown elsewhere on the plans, pipe may be 100 mm Schedule 40 Rigid Metal Conduit or 75 mm Rigid Metal Conduit with reducer.

All dimensions are in millimeters unless otherwise noted.

**CHANGE ORDER NO. 104**

**REVISED SHEET**

**NOTES:**

ALL PVC SHALL BE SCHEDULE 80.

ALL DIMENSIONS SHOWN ARE IN METERS UNLESS SPECIFIED OTHERWISE.

SEE NOTES, SHEET 1 OF 1. (580F)

CONTRACTOR SHALL INSTALL LOUVERS ON GREEN BALL INDICATIONS ON SIGNAL POLE "G".

SIGNAL POLE "G": 5-SECTION SIGNAL AND SIGN SHALL BE INSTALLED AND COVERED IF MARBACH RD. EXTENSION IS NOT OPEN.

**CHANGE ORDER NO. 104**

- -SWAPPED SIGNAL POLES "D" & "F"
- -CHANGED POLE "F" MAST ARM TO 11.0 FROM 9.8
- -ADDED 3-SECTION HEAD AND SIGN FOR LEFT TURNS ON LOOP 1604 F.R.
- -REPLACED LOOP DETECTORS (SAW-CUT, CONDUIT AND GROUND BOXES) WITH VIVDS.
- -CHANGED TO VERTICALLY ORIENTED SIGNAL HEADS
- -ADDED BACKPLATES

## LOOP 1604

## TRAFFIC SIGNAL INTERSECTION LAYOUT LOOP 1604 AT MARBACH RD.

S1 ANDERSON LOOP (XXXX YYYY)

S2 MARBACH RD (YYYY XXXX)

S3 ANDERSON LOOP (YYYY XXXX)

S4 MARBACH RD (XXXX YYYY)

LEFT TURN YIELD ON GREEN — SR10-12 (750 x 900)

LEFT TURN SIGNAL — R10-10L (750 x 900)

PUSH BUTTON FOR ← — R10-4BL (225 x 300)

PUSH BUTTON FOR → — R10-4BR (225 x 300)

**LEGEND**

- PROP. VIDEO IMAGING VEH. DETECTION SYSTEM CAMERA (VIVDS)
- PROP. GROUND BOX (TYPE "D")
- PROP. 75 mm PVC SCHEDULE 80
- PROP. 50 mm PVC SCHEDULE 80
- PROP. 32 mm PVC SCHEDULE 80
- PROP. MAST ARM POLE AND FOUNDATION
- PROP. SIGNAL FACE
- PROP. PEDESTRIAN SIGNAL HEAD WITH PUSH BUTTON
- PROP. PEDESTAL POLE AND FOUNDATION

**CHANGE ORDER NO. 104**

- SWAPPED SIGNAL POLES "D" & "F"
- CHANGED POLE "F" MAST ARM TO 11.0 FROM 9.8
- ADDED 3-SECTION HEAD AND SIGN FOR LEFT TURNS ON LOOP 1604 F.R.
- REPLACED LOOP DETECTORS (SAW-CUT, CONDUIT AND GROUND BOXES) WITH VIVDS.
- CHANGED TO VERTICALLY ORIENTED SIGNAL HEADS
- ADDED BACKPLATES

**NOTES:**

THE ENGINEER SHALL CONTACT MR. GILBERT MEIER(TXDOT SIGNAL SHOP) AT 615-5975 96 HOURS PRIOR TO CONSTRUCTION AND PRIOR TO CONNECTING FIELD WIRING TO CONTROLLER.

STATE FORCES SHALL CONNECT FIELD WIRING TO CONTROLLER.

ALL PVC SHALL BE SCHEDULE 80.

ALL DIMENSIONS SHOWN ARE IN METERS UNLESS SPECIFIED OTHERWISE.

ANY EXIST. SIGNAL EQUIPMENT DAMAGED DURING CONSTRUCTION SHALL BE REPLACED OR REPAIRED BY THE CONTRACTOR AS APPROVED BY THE ENGINEER.

EXISTING ELECTRICAL SERVICE AND CABLE SHALL REMAIN.

# TRAFFIC SIGNAL NOTES

UTILITY NOTES:

1. LOCATION OF UTILITIES SHOWN ARE APPROXIMATE. IT IS THE CONTRACTORS RESPONSIBILITY TO LOCATE ALL UTILITIES (PUBLIC AND PRIVATE) PRIOR TO COMMENCING WORK. THE CONTRACTOR IS FULLY RESPONSIBLE FOR ANY DAMAGES CAUSED BY HIS FAILURE TO LOCATE, PRESERVE, AND PROTECT THESE UTILITIES, WHETHER UNDERGROUND, ABOVE GROUND, OR OVERHEAD. THESE FACILITIES INCLUDE, BUT ARE NOT LIMITED TO, SOUTHWESTERN BELL TELEPHONE, CPS ELECTRIC & GAS, CABLE TV, SAWS WATER AND SEWER, AND EXISTING TRAFFIC SIGNAL FACILITIES. CONTRACTOR SHALL NOTIFY UTILITIES 48 HOURS PRIOR TO ANY EXCAVATION, BORING, TRENCHING, OR PUSHING PIPE IN AREA. THE FOLLOWING CONTACT NUMBERS MAY NOT BE INCLUSIVE, BUT ARE PROVIDED FOR THE CONTRACTOR'S INFORMATION.

TEXAS STATE-WIDE ONE CALL 800-545-6005
CPS ELECTRIC AND GAS: 800-545-6005 OR 210-978-3500
SAWS: 210-704-7109 OR 210-227-6143
TIME WARNER CABLE TV: 800-545-6005 OR 210-352-4672
SOUTHWESTERN BELL TEL: 800-545-6005
CITY OF SAN ANTONIO TRAFFIC SIGNAL: 210-207-7765
AT&T 800-252-1133
SPRINT 800-545-6005
BEXAR METRO 210-354-6546
CITY OF SAN ANTONIO TRAFFIC 210-207-7765
TXDOT TRAFFIC SIGNALS 210-615-5979
ENTEX GAS 800-545-6005
UNION PACIFIC RAILROAD (FIBER OPTIC) 800-336-9193
STATE-WIDE ONE CALL PROVIDERS
TESS 800-344-8377
TOCS 800-245-4545

THE EXISTENCE AND LOCATION OF UNDERGROUND UTILITIES INDICATED ON THE PLANS ARE TAKEN FROM THE BEST RECORDS AVAILABLE, BUT ARE NOT GUARANTEED ACCURATE. CONTRACTOR IS RESPONSIBLE FOR DETERMINING THE EXISTENCE AND LOCATION OF UNDERGROUND UTILITIES BEFORE COMMENCING WORK.

DUE TO FEDERAL REGULATION, TITLE-49, PART 192.181, CITY PUBLIC SERVICE (CPS) MUST MAINTAIN ACCESS TO GAS VALVES AT ALL TIMES. THE CONTRACTOR SHALL PROTECT AND WORK AROUND ANY GAS VALVES THAT ARE IN THE PROJECT AREA.

OVERHEAD UTILITIES MAY EXIST ON THE PROPERTY. WE HAVE NOT ATTEMPTED TO MARK THOSE SINCE THEY ARE CLEARLY VISIBLE. BUT YOU SHOULD LOCATE THEM BEFORE BEGINNING ANY CONSTRUCTION. TEXAS LAW, SECTION 752, HEALTH AND SAFETY CODE FORBIDS ALL ACTIVITIES IN WHICH PERSONS OR THINGS MAY COME WITHIN SIX (6) FEET OF LIVE OVERHEAD HIGH VOLTAGE LINES. CONTRACTORS AND OWNERS ARE LEGALLY RESPONSIBLE FOR SAFETY OF CONSTRUCTION WORKERS UNDER THIS LAW. THIS LAW CARRIES BOTH CRIMINAL AND CIVIL LIABILITY, TO ARRANGE FOR LINES TO BE TURNED OFF OR MOVED, CONTACT CPS AT 978-3500.

TRAFFIC SIGNAL GENERAL NOTES:

ALL ELECTRICAL WORK SHALL COMPLY WITH THE NATIONAL ELECTRIC CODE AND NATIONAL ELECTRICAL SAFETY CODE.

CONTRACTOR SHALL FURNISH AND MAINTAIN ALL TRAFFIC CONTROL DEVICES, LIGHTING, OR WARNING DEVICES REQUIRED TO COMPLETE THE WORK. ALL CONSTRUCTION SIGNS AND TRAFFIC CONTROL DEVICES SHALL CONFORM TO THE TEXAS MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES.

CONTRACTOR SHALL BE RESPONSIBLE FOR ACQUIRING ALL PERMITS, TESTS, APPROVALS AND ACCEPTANCES REQUIRED TO COMPLETE CONSTRUCTION OF THIS PROJECT.

ALL SIGNAL POLE FOUNDATIONS SHALL BE INSTALLED ACCORDING TO TS-FD STANDARD SHEET.

INSTALLATION OF ALL TRAFFIC SIGNAL SIGNS TO BE CONSIDERED SUBSIDIARY TO BID ITEM 680.

GROUND BOX IN CONTROLLER CABINET FOUNDATION SHALL BE FURNISHED AS INCIDENTAL AND SUBSIDIARY TO FURNISHING ITEM 0656. THIS GROUND BOX SHALL NOT BE MEASURED OR PAID FOR SEPARATELY.

CONTRACTOR SHALL EXPOSE UNDERGROUND UTILITIES MARKED WITHIN TWO FEET OF PROPOSED FOUNDATIONS AND GROUND BOXES PRIOR TO DIGGING.

CONTRACTOR SHALL ACQUIRE METER ADDRESS FROM CPS.

MATERIALS FURNISHED BY THE CONTRACTOR SHALL BE NEW, UN-DEPRECIATED STOCK. ALL EQUIPMENT SHALL BE NEW, UNLESS NOTED OTHERWISE ON THE PLANS.

CONTRACTOR SHALL FURNISH AND INSTALL ALL PERMANENT SIGNS MOUNTED ON TRAFFIC SIGNAL EQUIPMENT. THE CONTRACTOR SHALL PROVIDE ALL NECESSARY HARDWARE FOR MOUNTING. THE COSTS OF FURNISHING AND INSTALLING THESE SIGNS SHALL BE SUBSIDIARY TO ITEM 680.

INSTALL GROUND MOUNT SIGNS, STOPLINES AND PAVEMENT MARKINGS AS SHOWN ON THE PLANS.

GROUND BOX COVERS SHALL BE POLYMER CONCRETE WITH "DANGER HIGH VOLTAGE - TRAFFIC SIGNAL" LEGIBLY IMPRINTED IN 1 INCH LETTERS (MINIMUM HEIGHT).

CONTRACTOR SHALL BE RESPONSIBLE FOR RESTORING TO ORIGINAL CONDITION, OR BETTER, ANY DAMAGE DONE TO EXISTING BUILDINGS, RETAINING WALLS, UTILITIES, FENCES, PAVEMENT, CURBS OR DRIVEWAYS (NO SEPARATE PAY ITEM). CONTRACTOR SHALL RESTORE THE CONSTRUCTION AREA TO ORIGINAL CONDITION, OR BETTER, PRIOR TO FINAL INSPECTION.

ANY CONFLICT BETWEEN ANY DEFINITION, MATERIAL SPECIFICATION, CONSTRUCTION SPECIFICATION, MEASUREMENT AND PAYMENT PROCEDURE, ETC., SHOWN IN THIS PLAN SET AND ANY TEXAS DEPARTMENT OF TRANSPORTATION OR CITY OF SAN ANTONIO STANDARD SPECIFICATION SHALL BE RESOLVED ONLY BY THE ENGINEER AND THE ENGINEER'S DECISION SHALL BE FINAL AND BINDING.

FINAL ADJUSTMENT OF TRAFFIC SIGNAL HEADS (VEHICLE AND PEDESTRIAN), AS REQUIRED BY THE ENGINEER, SHALL BE DONE BY THE CONTRACTOR AND SHALL BE SUBSIDIARY TO FURNISHING AND INSTALLING TRAFFIC SIGNAL HEADS OR SECTIONS.

ALL TRAFFIC SIGNAL SECTIONS SHALL BE MADE OF POLYCARBONATE RESIN AND SHALL BE BY THE SAME MANUFACTURER.

ALL VEHICLE AND PEDESTRIAN SIGNAL FACES SHALL BE COVERED SO THAT THE INDICATION(S) CANNOT BE SEEN FROM THE TIME OF INSTALLATION UNTIL PLACED IN OPERATION.

EXISTING TRAFFIC CONTROLS SHALL REMAIN IN OPERATION UNTIL NEW CONTROLS ARE READY. CONTRACTOR SHALL COORDINATE "TURN-ON" OF THE NEW TRAFFIC SIGNAL WITH THE ENGINEER.

WHEN NECESSARY TO TURN OFF AN EXISTING SIGNAL, CONTRACTOR SHALL PROVIDE AN OFF-DUTY UNIFORMED OFFICER TO CONTROL TRAFFIC UNTIL THE TRAFFIC SIGNAL IS BACK IN SATISFACTORY OPERATION.

ALL LED'S PROVIDED MUST BE PREQAULIFIED BY MOST CURRENT VERSION OF TxDOT'S QUALIFIED PRODUCT LIST.

PEDESTRIAN EQUIPMENT NOTES:

ALL PEDESTRIAN SIGNAL FACES SHALL BE SINGLE SECTION LED TYPE. DIE CAST POLYCARBONATE WILL BE AN ACCEPTABLE MATERIAL IN LIEU OF DIE CAST ALUMINUM. THE PEDESTRIAN SIGNAL SHALL DISPLAY THE SYMBOLIZED MESSAGE AS SHOWN ON THE PLANS.

THE PEDESTRIAN PUSHBUTTON SHALL BE RAISED OR FLUSH AND BE A MINIMUM OF 2 INCHES IN THE SMALLEST DIMENSION. THE FORCE TO ACTIVATE THE CONTROL SHALL BE NO GREATER THAN 5 LB/FT.

SPECIAL NOTES:

CONTRACTOR, AT CONTRACTORS EXPENSE, SHALL FIELD LOCATE AND STAKE THE LOCATION OF POLES, PULLBOXES, CABINETS, AND DETECTORS FOR APPROVAL BY THE ENGINEER PRIOR TO CONSTRUCTION. POLE AND PULL BOX LOCATIONS MAY BE MOVED BY THE ENGINEER PRIOR TO CONSTRUCTION TO ACCOMMODATE FIELD CONDITIONS.

ALL STEEL POLE ASSEMBLIES AND PEDESTAL POLES FURNISHED BY THE CONTRACTOR SHALL BE FROM THE SAME MANUFACTURER.

EACH POLE FOUNDATION SHALL HAVE ONE ADDITIONAL 2 INCH CONDUIT STUBBED OUT 2 FEET FROM THE FOUNDATION AND CAPPED. FURNISHING OF THIS CONDUIT SHALL BE SUBSIDIARY TO ITEM 656.

# SPECIAL NOTES TRAFFIC SIGNALS IN CITY OF SAN ANTONIO MILITARY DR. WEST POTRANCO RD. WISEMAN BLVD.

CITY FORCES SHALL CONNECT FIELD WIRING TO CONTROLLER.

CONTRACTOR SHALL CONTACT TRAFFIC OPERATIONS (207-7765) 48 HOURS PRIOR TO COMMENCING WORK.

PRIOR TO CONSTRUCTION, THE CITY SHALL APPROVE ALL LOCATIONS FOR POLES, CONTROLLER FOUNDATION AND ELECTRICAL SERVICE PEDESTAL. CONTRACTOR SHALL STAKE LOCATIONS BEFORE CONTACTING CITY FOR APPROVAL.

THREE (3) COPIES OF EQUIPMENT SUBMITTALS FOR ALL TRAFFIC SIGNAL COMPONENTS SHALL BE SENT TO THE TRAFFIC SIGNAL ENGINEER (733-4573). SUBMITTALS SHALL CONSIST OF THE APPROPRIATE COMBINATION OF CATALOG SHEETS, MATERIAL LISTS, MANUFACTURER'S BROCHURES, TECHNICAL BULLETINS, SPECIFICATIONS, DIAGRAMS, OR PRODUCT SAMPLES NECESSARY TO DESCRIBE A SYSTEM, PRODUCT, OR ITEM. SPECIFIC ITEM NUMBERS AND PRODUCT CODES WILL BE CLEARLY IDENTIFIED WHEN MULTIPLE PRODUCTS ARE LISTED ON THE SAME SHEET.

THE GROUND BOX IN THE CONTROLLER FOUNDATION SHALL BE SUBSIDIARY TO ITEM 656 "TRAF SIG CNTRL FND (CITY TYPE)."

EXISTING STREET NAME AND STOP SIGN SHALL BE SALVAGED AND RETURNED TO THE CITY TRAFFIC OPERATIONS CENTER. CONTRACTOR SHALL BE RESPONSIBLE FOR THE DISPOSAL OF ANY WASTE MATERIAL. ANY TRAFFIC SIGNAL EQUIPMENT SHALL BE SALVAGED TO THE CITY TRAFFIC OPERATIONS CENTER, OR AS DIRECTED BY THE TRAFFIC SIGNAL ENGINEER.

FOR EACH CABLE TERMINATING IN THE CONTROLER CABINET AN EXTRA 10 FEET LENGTH SHALL BE PROVIDED. ALL CABLES SHALL BE CONTINUOUS WITHOUT SPLICES FROM TERMINAL POINT TO TERMINAL POINT OR AS DIRECTED/APPROVED BY THE ENGINEER. ALL PROPOSED SIGNAL CABLE SHALL BE AWG #14 SOLID COPPER. THE NUMBER OF CONDUCTORS REQUIRED SHALL BE AS SHOWN ON THE PLANS.

FOR ALL PROPOSED MAST ARM POLE ASSEMBLIES, MOUNTING BRACKET ASSEMBLY OPTION "C" (ASTRO-BRACS) AS SHOWN ON THE STATE STANDARD SHEET(S) "SINGLE MAST ARM ASSEMBLIES (SMA)" SHALL BE SUPPLIED BY THE CONTRACTOR. MOUNTING BRACKET ASSEMBLIES (ASTRO-BRACS) SHALL BE SUBSIDIARY TO ITEM 682 "VEHICLES AND PEDESTRIAN SIGNAL HEADS".

CONTRACTOR SHALL SUPPLY ORNAMENTAL CAPS IN PLACE OF THE MAST ARM TENON ENDS.

THE ENGINEER SHALL CONTACT THE CITY OF SAN ANTONIO AT 207-7765 96 HOURS PRIOR TO CONSTRUCTION, PRIOR TO PICKING UP COSA FURNISHED MATERIALS AND PRIOR TO CONNECTING FIELD WIRING TO CONTROLLER.

# CONSTRUCTION PHASE 2A
## Stage A

**NOTES:**

THE ENGINEER SHALL CONTACT MR. GILBERT MEIER TXDOT SIGNAL SHOP) AT 615-5975 96 HOURS PRIOR TO CONSTRUCTION PHASE AND PRIOR TO CONNECTING FIELD WIRING TO CONTROLLER.

CONTRACTOR SHALL CONNECT FIELD WIRING TO TEMPORARY CONTROLLER.

ALL DIMENSIONS SHOWN ARE IN METERS UNLESS SPECIFIED OTHERWISE.

CONTRACTOR SHALL BE RESPONSIBLE FOR ALL SIGNAL HEAD ADJUSTMENTS DURING EACH PHASE OF CONSTRUCTION. TO ACCOMODATE SIGNAL HEAD ADJUSTMENTS, THE CONTRACTOR SHALL ENSURE THAT ADDITIONAL SIGNAL CABLE IS PROVIDED FOR ALL APPROACHES.

PRIOR TO PHASE II ROAD CONSTRUCTION, THE EXISTING TRAFFIC SIGNAL SHALL REMAIN IN OPERATION(WITH VIVDS) OR AS DIRECTED BY THE ENGINEER.

EXISTING SIGNAL SPAN, HEADS AND CABLE FOR LOOP 1604 APPROACHES SHALL BE REMOVED AND RELOCATED AS DIRECTED BY THE ENGINEER.

VIVDS CAMERA ASSEMBLY LOCATIONS SHALL BE AS DIRECTED BY THE ENGINEER.

**NOTES:**

THE ENGINEER SHALL CONTACT MR. GILBERT MEIER TXDOT SIGNAL SHOP) AT 615-5975 96 HOURS PRIOR TO CONSTRUCTION PHASE AND PRIOR TO CONNECTING FIELD WIRING TO CONTROLLER.

CONTRACTOR SHALL CONNECT FIELD WIRING TO TEMPORARY CONTROLLER.

ALL DIMENSIONS SHOWN ARE IN METERS UNLESS SPECIFIED OTHERWISE.

CONTRACTOR SHALL BE RESPONSIBLE FOR ALL SIGNAL HEAD ADJUSTMENTS DURING EACH PHASE OF CONSTRUCTION TO ACCOMODATE SIGNAL HEAD ADJUSTMENTS, THE CONTRACTOR IS ADVISED TO ENSURE THAT ADDITIONAL SIGNAL CABLE IS PROVIDED FOR ALL APPROACHES.

PRIOR TO PHASE II ROAD CONSTRUCTION, THE EXISTING TRAFFIC SIGNAL SHALL REMAIN IN OPERATION(WITH VIVDS) OR AS DIRECTED BY THE ENGINEER.

EXISTING SIGNAL SPAN, HEADS AND CABLE FOR LOOP 1604 APPROACHES SHALL BE REMOVED AND RELOCATED AS DIRECTED BY THE ENGINEER.

VIVDS CAMERA ASSEMBLY LOCATIONS SHALL BE ADJUSTED AS DIRECTED BY THE ENGINEER. TWO VIVDS CAMERAS SHALL BE USED ON LOOP 1604 APPROACHES TO PROVIDE HIGH SPEED DETECTION. CONTRACTOR SHALL ADJUST VIVDS DETECTION ZONES AS REQUIRED FOR EACH SUBSEQUENT PHASE CHANGES AS DIRECTED BY THE ENGINEER.

PEDESTRIAN ACCESS TO POLE D SHALL BE MAINTAINED DURING ALL PHASES AND STAGES OF CONSTRUCTION.

△ CHANGE ORDER NO. 78

-REVISED RDWY GEOMETRICS AND LANE CONFIGURATIONS
-NEW SHEET

MATERIALS TO BE FURNISHED AND INSTALLED BY THE CONTRACTOR

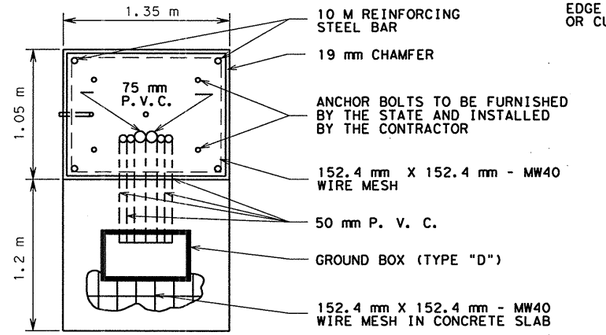
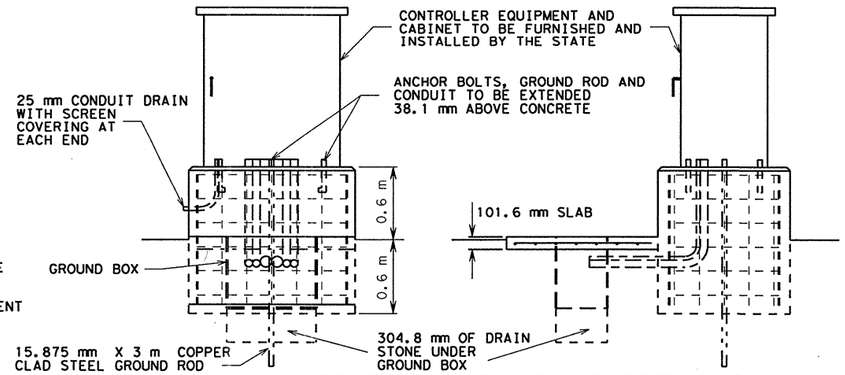
# TYPICAL LOOP DETECTOR DETAILS

## LOOP DETECTOR NOTES :

1. THE PAVEMENT CUT IS TO BE MADE WITH ANY EQUIPMENT THAT WILL PRODUCE A NEAT STRAIGHT LINE OF THE SIZE INDICATED. ALL LOOSE MATERIAL SHALL BE REMOVED. THE CUT SHALL BE CLEAN AND DRY WHEN THE WIRE AND THE SEALANT IS PLACED
2. WHERE MORE THAN ONE LOOP IS PLACED ON AN INTERSECTION APPROACH, THE WIRE FROM LOOP TO GROUND BOX SHALL NOT BE PLACED IN A SAW CUT WITH WIRE FROM OTHER LOOPS UNLESS OTHERWISE SHOWN IN THE PLANS
3. THE LOOP WIRE SHALL BE TWISTED A MINIMUM OF FIVE TURNS PER 305 mm FROM THE EDGE OF THE ROAD TO THE GROUND BOX AND NO SPLICES SHALL BE PERMITTED IN THE LOOP OR IN THE RUN TO THE PULL BOX
4. THE 1/C#14 LOOP WIRE SHALL BE SINGLE CONDUCTOR CROSSLINKED POLYETHYLENE (0.045) INSULATED WIRE, TYPE: USE, RHH, RHW,14 AWG STRANDED COPPER RATED AT 600 VOLTS
5. THE 2/C#14 LOOP CABLE SHALL BE TWO CONDUCTOR SHIELDED CABLE, 14 AWG, 19 X 27 STRANDED , 600 VOLT TINNED COPPER, POLYETHYLENE INSULATED, TWISTED PAIR, TWISTED A MINIMUM OF FIVE TWISTS PER FOOT, ALUMINUM-POLYESTER SHIELD, 16 AWG STRANDED TINNED COPPER DRAIN WIRE, CHROME VINYL JACKET, 100 % SHIELD COVERAGE THE LOOP CABLE SHALL BE CONTINUOUS WITHOUT SPLICES
6. THE LOOP WIRE SHALL BE SPLICED TO THE LOOP CABLE BY SOLDERING CONDUCTORS, SECURING WITH A WIRE NUT AND FULLY ENCAPSULATING INTO A WATER TIGHT COMMERCIAL SPLICING KIT
7. ALL LOOP WIRE PLACED IN A SAW CUT SHALL BE SEALED BY FULLY ENCAPSULATING IT WITH LOOP WIRE SEALANT
8. ALL LOOP WIRE AND LOOP CABLE SHALL BE TESTED. WIRE AND CABLE TESTING LESS THAN 50 MEGAOHMS INSULATION RESISTANCE AT 500 VOLTS SHALL BE REPLACED BY THE CONTRACTOR AT HIS EXPENSE. THIS TEST SHOULD BE MADE BEFORE, DURING AND AFTER EACH COMPLETE LOOP DETECTOR INSTALLATION
9. UPON COMPLETION OF THE COMPLETE LOOP DETECTOR SYSTEM, THE FINAL TEST WILL BE MADE AT ITS TERMINATION AT THE CONTROLLER BY THE ENGINEER. ANY LOOP DETECTOR NOT MEETING THE REQUIREMENTS OF NOTE 8 SHALL BE REPLACED BY THE CONTRACTOR AT THEIR EXPENSE. THE FINAL TEST SHALL BE MADE PRIOR TO THE FINAL MAT OF A. C. P.





# TYPICAL CONTROLLER MOUNT DETAILS

## CONTROLLER MOUNT NOTES :

ALL WIRING TERMINATING IN THE CONTROLLER SHALL BE LABELLED IN A MANNER THAT CAN BE IDENTIFIED BY THE ENGINEER WHEN THE CONTROLLER IS INSTALLED

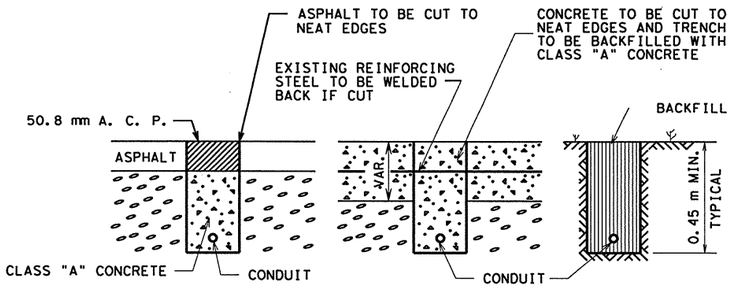
ONE 50 mm PVC SHALL REMAIN EMPTY FOR FUTURE USE

CLASS "A" CONCRETE SHALL BE USED FOR CONTROLLER FOUNDATION AND SLAB

CONCRETE SHALL BE TESTED AS MISCELLANEOUS CONCRETE

ALL MATERIALS AND LABOR TO INSTALL THE CONTROLLER FOUNDATION SHALL BE CONSIDERED SUBSIDIARY TO BID ITEM 656

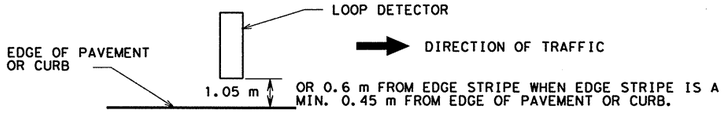
CONTROLLER FOUNDATION MAY BE ALTERED TO ACCOMODATE FIELD CONDITIONS AS DIRECTED BY THE ENGINEER.



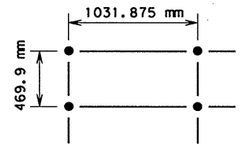
**ASPHALT PAVEMENT** **CONCRETE PAVEMENT** **NATURAL GROUND**

# TRENCH DETAILS

CONCRETE TO BE TESTED AS MISCELLANEOUS CONCRETE
WIDTH OF TRENCH SHALL BE WIDE ENOUGH TO ACCOMODATE CONDUIT



# LOOP DETECTOR PLACEMENT



**ANCHOR BOLT PATTERN**

# LOOP DETECTOR CONTROLLER FOUNDATION AND CONDUIT TRENCH DETAILS

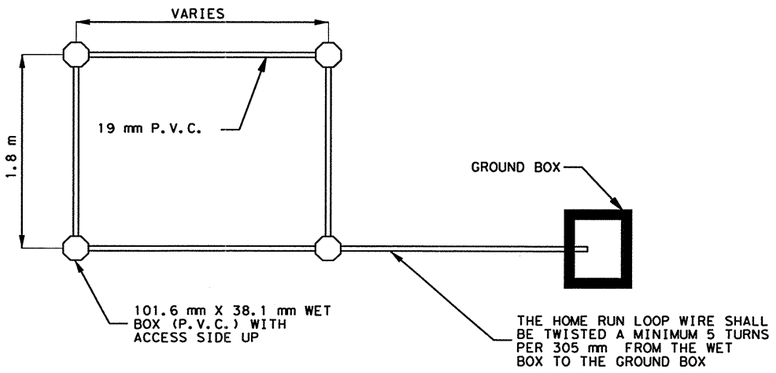
## PEDESTAL SIGNAL POLE ASSEMBLY



NOTES:

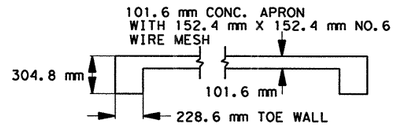
THE CONTRACTOR SHALL INSTALL CONDUIT ENCASED LOOPS AT THE LOCATIONS SHOWN ON THE PLANS USING 19.1 mm DIAMETER PVC SCHEDULE 40 OR AT NO ADDITIONAL COST 25.4 mm DIAMETER PVC SCHEDULE 80.

LOOP LOCATIONS MAY BE STAGGERED SLIGHTLY (152.4 mm) TO ACCOMODATE HOME RUN PLACEMENT.

INDIVIDUAL HOME RUN CONDUITS SHALL BE EXTENED TO THE GROUND BOX SHOWN ON THE PLANS FOR EACH LOOP INSTALLED.

THE NUMBER OF LOOP WIRE TURNS SHALL BE AS DETAILED IN THE TYPICAL LOOP DETECTOR DETAILS.

## CONDUIT ENCASED LOOPS



## CONCRETE ACCESS PAD DETAILS

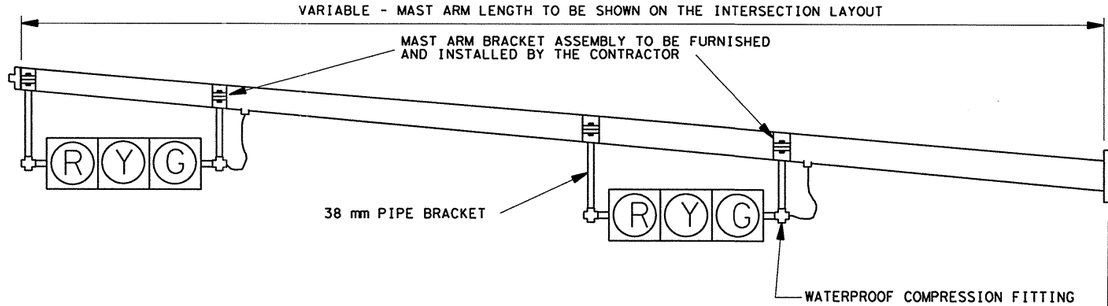
THE FLEX BASE CUSHION UNDER ALL SIDEWALKS, WHEELCHAIR RAMPS, ACCESS PADS AND DIRECTIONAL ISLANDS MAY BE OF ANY TYPE AND GRADE APPROVED BY THE ENGINEER.

THE FLEX BASE WILL BE SPRINKLED AND ROLLED/TAMPED AS APPROVED BY THE ENGINEER.

FURNISHING AND PLACING THE BASE CUSHION WILL BE SUBSIDIARY TO THE VARIOUS BID ITEMS IN THIS CONTRACT.

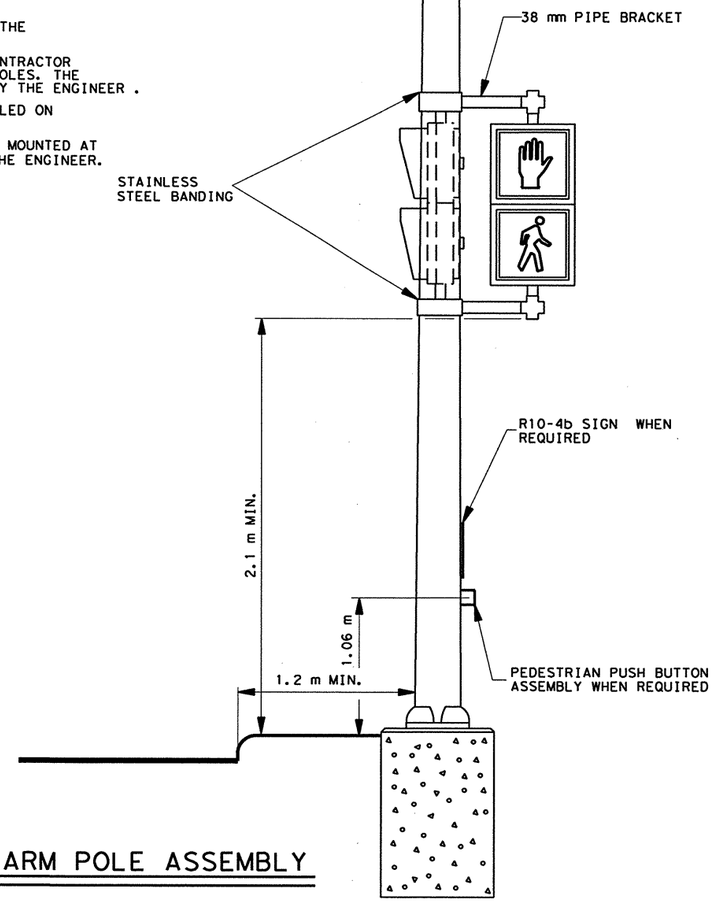
CLASS "B" CONCRETE SHALL BE PLACED AS SHOWN IN THE DETAILS AND AS APPROVED BY THE ENGINEER.

CURB, IF REQUIRED, SHALL BE TYPE II MONO AS SHOWN ON STATE STANDARD SHEET CCCG-95(M).



**NOTES :**

1. SIGNAL POLES AND MAST ARMS WILL BE FURNISHED AND INSTALLED BY THE CONTRACTOR .
2. THE POLES WILL BE FURNISHED WITH A HANDHOLE AND COVER . THE CONTRACTOR SHALL FURNISH AND INSTALL ALL TERMINAL BLOCKS INSIDE THE HANDHOLES. THE TERMINAL BLOCKS AND MOUNTING PROCEDURES SHALL BE AS APPROVED BY THE ENGINEER .
3. AT THE LOCATION SHOWN, PEDESTRIAN SIGNAL HEADS SHALL BE INSTALLED ON PEDESTAL POLES FURNISHED BY THE CONTRACTOR .
4. SIGNAL HEADS SHALL BE MOUNTED IN A LEVEL POSITION AND SHALL BE MOUNTED AT A MINIMUM HEIGHT OF 5.1 m FROM THE ROADWAY OR AS DIRECTED BY THE ENGINEER.



## MAST ARM POLE ASSEMBLY

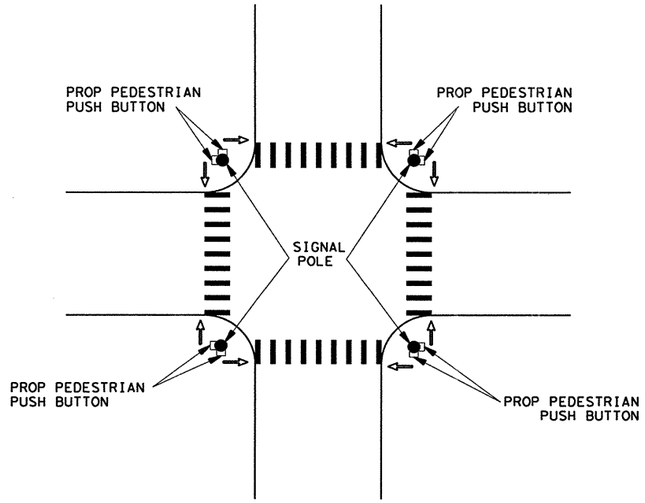
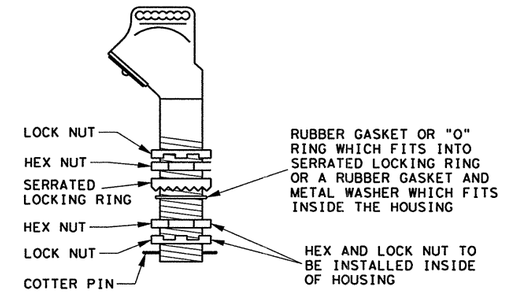
## STEEL STRAIN POLE ASSEMBLY

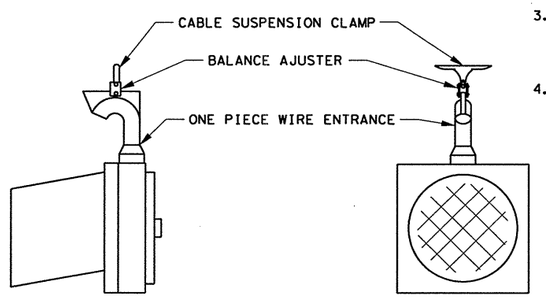


## TYPICAL PED PUSH BUTTON LOCATION

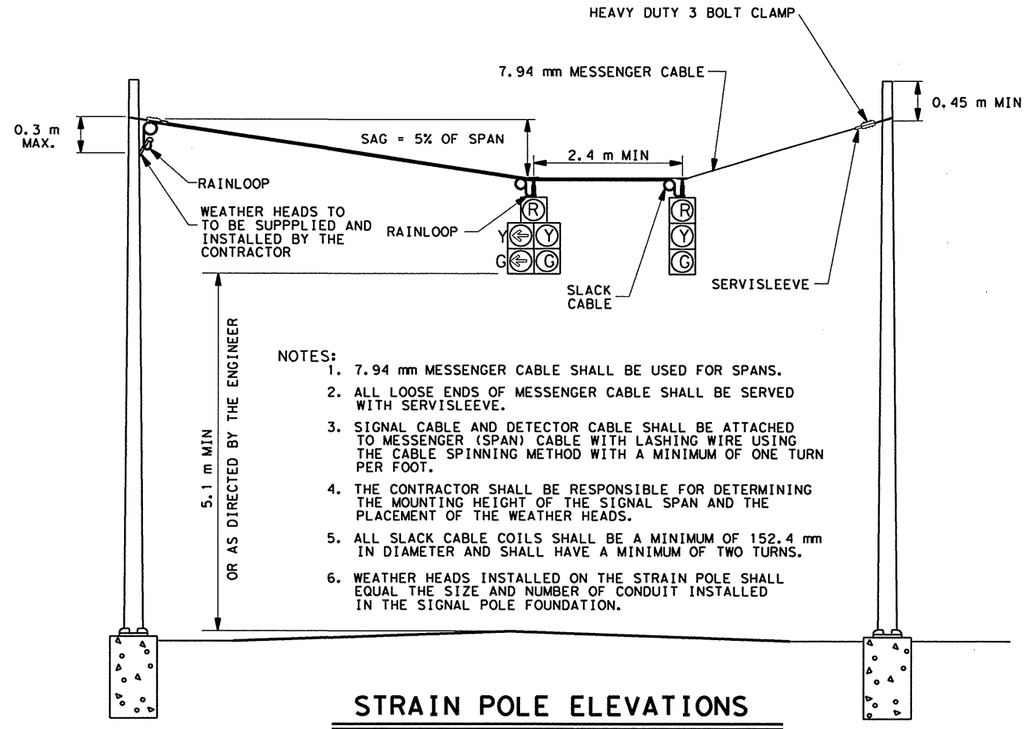
THE ENGINEER SHALL VERIFY ALL PEDESTRIAN SIGNAL AND PEDESTRIAN PUSH BUTTON LOCATIONS PRIOR TO THEIR INSTALLATION.



## WIRE ENTRANCE DETAILS



## TYPICAL SPAN WIRE CLAMP ASSEMBLY



NOTES:
1. 7.94 mm MESSENGER CABLE SHALL BE USED FOR SPANS.
2. ALL LOOSE ENDS OF MESSENGER CABLE SHALL BE SERVED WITH SERVISLEEVE.
3. SIGNAL CABLE AND DETECTOR CABLE SHALL BE ATTACHED TO MESSENGER (SPAN) CABLE WITH LASHING WIRE USING THE CABLE SPINNING METHOD WITH A MINIMUM OF ONE TURN PER FOOT.
4. THE CONTRACTOR SHALL BE RESPONSIBLE FOR DETERMINING THE MOUNTING HEIGHT OF THE SIGNAL SPAN AND THE PLACEMENT OF THE WEATHER HEADS.
5. ALL SLACK CABLE COILS SHALL BE A MINIMUM OF 152.4 mm IN DIAMETER AND SHALL HAVE A MINIMUM OF TWO TURNS.
6. WEATHER HEADS INSTALLED ON THE STRAIN POLE SHALL EQUAL THE SIZE AND NUMBER OF CONDUIT INSTALLED IN THE SIGNAL POLE FOUNDATION.

## STRAIN POLE ELEVATIONS
## VERTICAL SIGNALS

NOTES:
1. THE WIRE OUTLET, BALANCE ADJUSTER, HUB AND SPAN WIRE CLAMP IS A TYPICAL DESIGN LABELING SPECIFIC ITEMS REQUIRED. OTHER WIRE OUTLETS BALANCE AJUSTERS, HUBS, AND SPAN WIRE CLAMPS OF SIMILAR DESIGN PROVIDING THE ITEMS LABELED WILL BE ACCEPTABLE AS APPROVED BY THE ENGINEER.
2. ANY OPEN END OF AN ASSEMBLED SIGNAL HOUSING SHALL BE PLUGGED WITH AN ORNAMENTAL CAP AND GASKET.
3. ALLEN SET SCREWS AND OTHER TYPES OF LOCKING OR SET SCREWS WILL NOT BE PERMITTED IN HEX NUTS SIGNAL HEAD HUBS, AND CROSS CONNECTION FITTINGS, NOR WILL HOLES BE PERMITTED FOR THESE SCREWS.
4. BALANCE ADJUSTERS WILL BE REQUIRED FOR ALL SIGNALS.

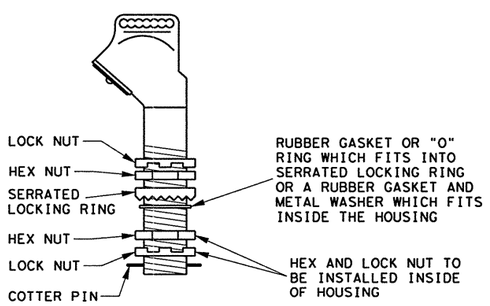
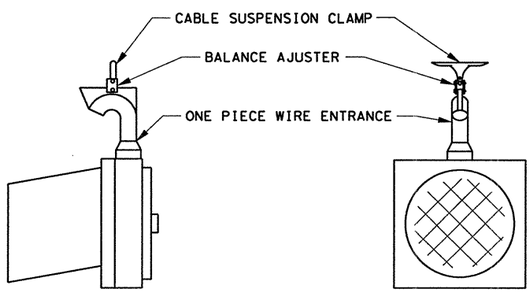
6. THE CONTRACTOR SHALL BE RESPONSIBLE FOR DETERMINING THE MOUNTING HEIGHT OF THE SIGNAL SPAN AND THE PLACEMENT OF THE WEATHER HEADS.
7. ALL SLACK CABLE COILS SHALL BE A MINIMUM OF 152.4 mm IN DIAMETER AND SHALL HAVE A MINIMUM OF TWO TURNS.
8. SPAN WIRES SHALL BE BONDED TOGETHER TO FORM ONE CONTINUOUS SIGNAL SYSTEM GROUND AS DIRECTED BY THE ENGINEER.

## TIMBER POLE INSTALLATION DETAILS
## VERTICAL SIGNALS



## WIRE ENTRANCE DETAILS



## TYPICAL SPAN WIRE CLAMP ASSEMBLY

NOTES:

1. THE WIRE OUTLET, BALANCE ADJUSTER, HUB AND SPAN WIRE CLAMP IS A TYPICAL DESIGN LABELING SPECIFIC ITEMS REQUIRED. OTHER WIRE OUTLETS BALANCE AJUSTERS, HUBS, AND SPAN WIRE CLAMPS OF SIMILAR DESIGN PROVIDING THE ITEMS LABELED WILL BE ACCEPTABLE AS APPROVED BY THE ENGINEER.
2. ANY OPEN END OF AN ASSEMBLED SIGNAL HOUSING SHALL BE PLUGGED WITH AN ORNAMENTAL CAP AND GASKET.
3. ALLEN SET SCREWS AND OTHER TYPES OF LOCKING OR SET SCREWS WILL NOT BE PERMITTED IN HEX NUTS SIGNAL HEAD HUBS, AND CROSS CONNECTION FITTINGS, NOR WILL HOLES BE PERMITTED FOR THESE SCREWS.
4. BALANCE ADJUSTERS WILL BE REQUIRED FOR ALL SIGNALS.

## ELECTRICAL SERVICE

(TYPE T TIMBER POLE SHOWN AS EXAMPLE, SEE ELECTRICAL DETAILS, LAYOUT SHEETS, AND ELECTRICAL SERVICE DATA SHEET FOR SERVICE REQUIRED AND FOR DETAILS.)

Unless shown elsewhere in the plans, electrical service data for Types D and T shall be as follows.

**ELECTRICAL SERVICE DATA**

| ELECTRICAL SERVICE DESCRIPTION(SEE ED(3)) | SERVICE CONDUIT SIZE (RMC) | SERVICE CONDUCTORS NO./SIZE | SAFETY SWITCH AMPS | MAIN DISCONNECT | | TWO-POLE CONTACTOR AMPS | PANELBD./ LOADCENTER AMP RATING (MIN) | CIRCUIT NO. | BRANCH CKT. BRK. POLE/AMPS | KVA LOAD |
|---|---|---|---|---|---|---|---|---|---|---|

| TY D (120/240)070(NS)GS(E)**(*) | 38 mm | 3/#4 | N/A | N/A | 2P/70 | 20 | 70 | T.S. Lighting | 1P/50 2P/20 | <7.1 |
| TY T (120/240)000(NS)GS(E)**(*) | 38 mm | 3/#4 | N/A | None | None | 20 | 70 | T.S. Lighting | 1P/50 2P/20 | <7.1 |

** See descriptive code in estimate for service support type.
* See descriptive code in estimate for overhead or underground service.

NOTES:

1. Luminaire conductors shall not be looped through controller cabinet.
2. Electrical system to include an equipment grounding conductor noted here as "G". All exposed metal parts, lightning arrestors and surge protectors are to be bonded to grounding conductor.
3. Bond neutral bus to cabinet bonding lug when required elsewhere on the plans or when required by the Engineer.
4. Photocell, when required, shall be mounted at top of pole or in enclosure as shown on ED(3) and ED(4) and as required by descriptive code.
5. Roadway lighting fixtures, when required, shall be in accordance with the material and construction methods of the Item, "Roadway Illumination Assemblies" except for the test period for proper operation of the luminaires, Installed roadway lighting luminaires and internally lighted street name signs shall be tested for proper operation as a part of the associated traffic signal system.
6. Internally lighted street name signs (ILSN), when required, shall be in accordance with the Item "Internally Lighted Street Name Signs". Because of the electrical isolation of ILSN hinges, a #12 green grounding conductor shall be run to the ILSN fixture.
7. Install ground rod at alternate location when directed by the Engineer. Maintain a minimum of 2400 mm in contact with the earth.

All dimensions are in millimeters unless otherwise noted.

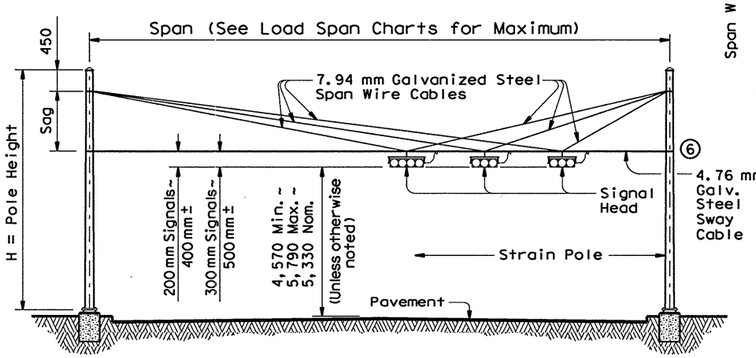
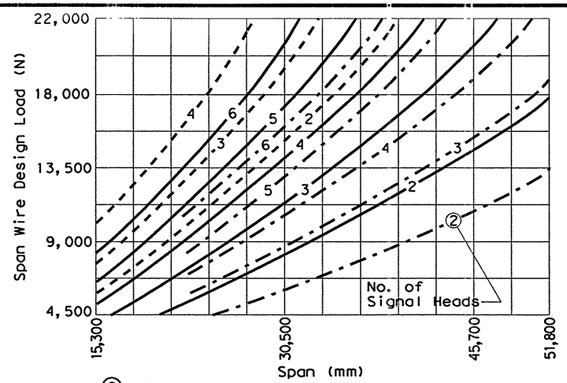
| 10,360 mm Pole with Lum. | D | 900-B | 24,000 |

② Numbers on charts indicate the number of signal heads on the span. The total span wire design load is based on one 5-section head and one or more additional 3-section head(s). Design wind pressures on cables are assumed as 15 N/m. Weight of span wire cables (one per signal head) is assumed as 9.5 N/m which includes an allowance for conductor cables and miscellaneous hardware. The effect of the sway cable on load distribution is ignored as it is assumed to break at design wind conditions. When a pole supports 2 spans, the span wire design loads for both spans should be added vectorially to determine the design load for that pole.



## STRAIN POLE ELEVATIONS HORIZONTAL SIGNALS



## ②SIGNALS WITH 300 mm LENS

## DETAIL D

## GENERAL NOTES:

Design conforms to 1994 AASHTO Standard Specifications for Structural Supports for Highway Signs, Luminaires, and Traffic Signals and Interim Specifications thereto. Design Wind Speed equals 130 km/h plus a 1.3 gust factor. The maximum permissible span wire design loads tabulated are calculated at a stress load of 1.4 times the basic allowable stress. A simultaneous wind on the pole, mast arm, and luminaire is also included.

See standard sheet "DMA-130(M)" for details of clamp-on traffic signal arms, sheet "MA-C(M)" for traffic signal arm connection details, sheet "LUM-A(M)" for luminaire arm and connection details, and sheet "TS-FD(M)" for anchor bolt and foundation details.

Fabrication shall be in accordance with the Specifications and with the details, dimensions, and weld procedures shown herein. Weld references call for preapproved weld procedures which the Fabricator must obtain prior to fabrication. Materials, fabrication tolerances, and shipping practices shall meet the requirements of this sheet and the Specifications.

Unless otherwise noted, all parts shall be galvanized in accordance with the Specifications.

Special designs require submission of shop drawings in accordance with the item "Steel Structures".

Note: All dimensions are in millimeters (mm) except as noted.

## DETAIL D

## GENERAL NOTES:

Design conforms to 1994 AASHTO Standard Specifications for Structural Supports for Highway Signs, Luminaires, and Traffic Signals and Interim Specifications thereto. Design Wind Speed equals 130 km/h plus a 1.3 gust factor. The maximum permissible span wire design loads tabulated are calculated at a stress load of 1.4 times the basic allowable stress. A simultaneous wind on the pole, mast arm, and luminaire is also included.

See standard sheet "DMA-130(M)" for details of clamp-on traffic signal arms, sheet "MA-C(M)" for traffic signal arm connection details, sheet "LUM-A(M)" for luminaire arm and connection details, and sheet "TS-FD(M)" for anchor bolt and foundation details.

Fabrication shall be in accordance with the Specifications and with the details, dimensions, and weld procedures shown herein. Weld references call for preapproved weld procedures which the Fabricator must obtain prior to fabrication. Materials, fabrication tolerances, and shipping practices shall meet the requirements of this sheet and the Specifications.

Unless otherwise noted, all parts shall be galvanized in accordance with the Specifications.

Special designs require submission of shop drawings in accordance with the item "Steel Structures".

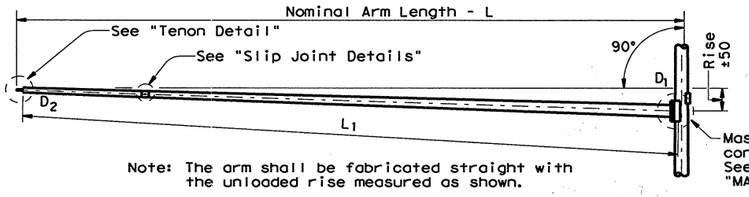
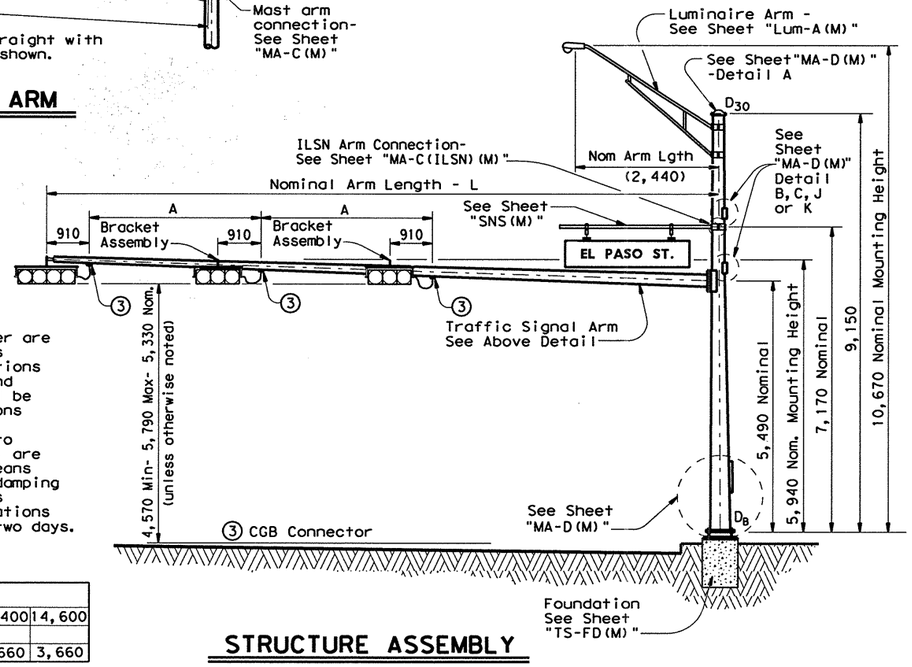
② $D_2$ may be increased by up to 25 mm for polygonal arms.



Note: The arm shall be fabricated straight with the unloaded rise measured as shown.

## TRAFFIC SIGNAL ARM

(Fixed Mount)



## STRUCTURE ASSEMBLY

### VIBRATION WARNING

Mast Arms of approximately 12,200 mm or longer are subject to possible harmonic vertical vibrations in light wind conditions due to unusual combinations of signal numbers, weights or positions, arm-wind orientation, and arm-pole stiffness. Arms shall be visually inspected in 8 to 32 Kmph wind conditions after signal head installation and, if vertical movements with a total excursion (max positive to max negative) of more than approximately 200 mm are observed at arm tip, damping devices or other means shall be fitted to the arm(s). The necessary damping device(s) or other remedial measures shall be as recommended by the fabricator. Excessive vibrations shall not be allowed to continue for more than two days.

### GENERAL NOTES:

Design conforms to 1994 AASHTO Standard Specifications for Structural Supports for Highway Signs, Luminaires, and Traffic Signals and Interim Specifications thereto. Design Wind Speed equals 130 kmph plus a 1.3 gust factor.

Poles are designed to support one 2,440 mm luminaire arm, one 2,750 mm internally lighted street name sign and one traffic signal arm with a length as tabulated. The specified luminaire load applied at the end of the luminaire arm equals 335 N vertical dead load plus the horizontal wind load on an effective projected area of 0.14 sq meter. The specified internally lighted street name sign load applied 1,400 mm from the centerline of the pole equals 378 N vertical dead load plus horizontal wind load on an effective projected area of 1.07 sq meter. The specified signal load applied at the end of the traffic signal arm equals 800 N vertical dead load plus the horizontal wind load on an effective projected area of 3.0 sq meter (actual area times drag coefficient).

See Standard Sheet "MA-D(M)" for pole details, "MA-C(M)" for traffic signal arm connection details, "MA-C (ILSN)(M)" for internally lighted street name sign arm connection details, "LUM-A(M)" for luminaire arm and connection details, "SNS(M)" for internally lighted street name sign details, and "TS-FD(M)" for anchor bolt and foundation details. See "MA-C(M)" for material specifications.

Fabrication shall be in accordance with the Specifications and with the details, dimensions, and weld procedures shown herein. Weld references call for preapproved weld procedures which the Fabricator must obtain prior to fabrication. Miscellaneous welds which do not call for preapproved weld procedures are nevertheless subject to rejection for poor workmanship. Materials, fabrication tolerances, and shipping practices shall meet the requirements of this sheet and the Specifications.

Unless otherwise noted, all parts shall be galvanized in accordance with the Specifications.

Special design require submission of shop drawings in accordance with the item "Steel Structures".

Note: All dimensions are in millimeters (mm) except as noted.

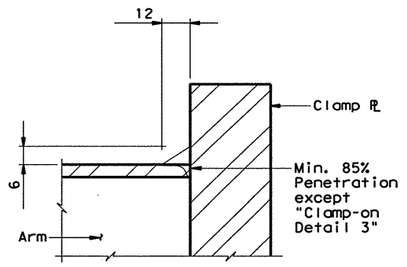
| Pin Bolts | ASTM A325M |
| Pipe | ASTM A53 GR A or B, OR A501 |
| Misc. Hardware | Galvanized steel or stainless steel or as noted |

(1) Any of the materials listed for plates may be used where the drawings do not specify a particular Grade designation.

(2) If A 595 material is used, it need not be cold worked to A 595 requirments, but material must have 276 MPa minimum yield prior to fabrication.

FIXED MOUNT ARM



CLAMP-ON ARM

## ARM BASE WELD DETAILS

### GENERAL NOTES:

Clamp-on details are used for the second arm on dual mast arm assemblies. A Maximum 38 mm wide vertical slotted hole may be cut in the front clamp plate to facilitate drainage during galvanizing. The slot shall be centered behind the arm and shall be no longer than the arm diameter minus 25 mm.

Fixed mount details are used for single mast arm assemblies and for the first arm on dual mast arm assemblies.

Where duplicate parts occur on a detail, welds shown for one part shall apply to all similar parts on the detail.

Pin bolts are required to prevent rotation of clamp-on arms under design wind forces.

### NOTE:

Pin bolts shall be A325M with threads excluded from the shear plane. Pin bolt and 19 mm dia pipe shall have 5 mm dia holes for a 3 mm dia galvanized cotter pin. Back clamp plate shall be furnished with a 3/4" dia hole for each pin bolt. An 11/16" dia hole for each pin bolt shall be field drilled through the pole after arm orientations have been approved by the Engineer.

NOTE: All dimensions are in millimeters (mm) except as noted.

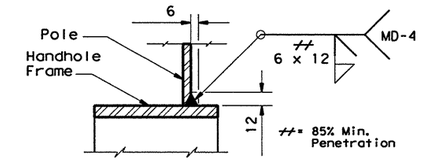
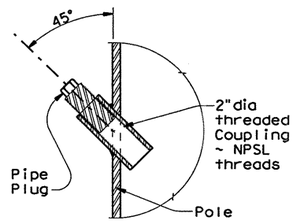
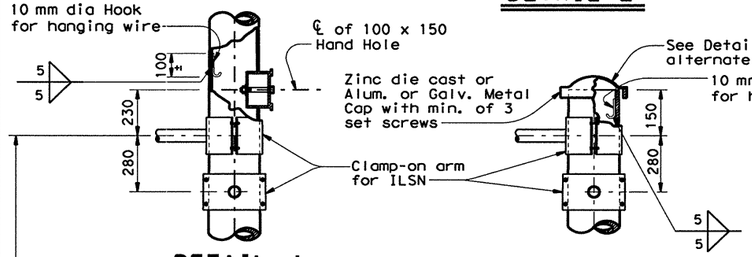
## DETAIL A
(for pole with luminaire)



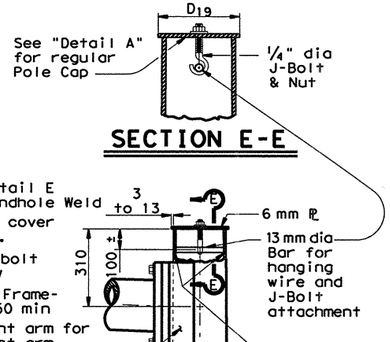
## DETAIL E



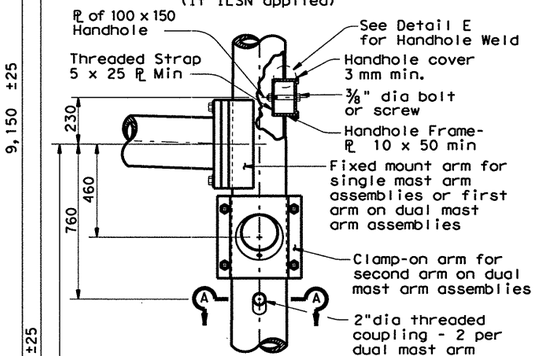
## COUPLING DETAIL



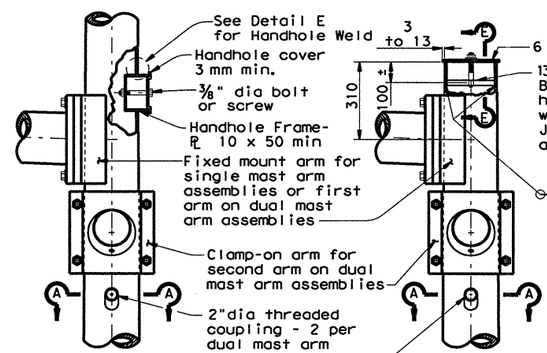
## DETAIL J
(if ILSN applied)



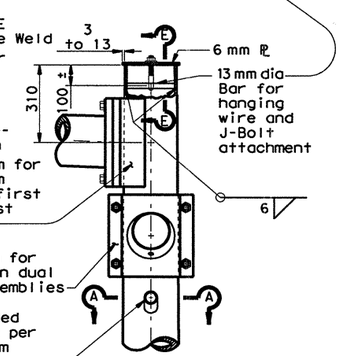
## SECTION E-E



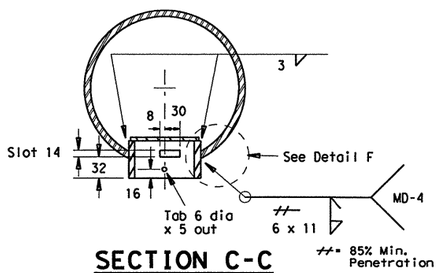
## DETAIL B
(for 9,150 mm pole with luminaire and ILSN sign)



## DETAIL K
(for 7,320 mm pole with ILSN sign and no luminaire)

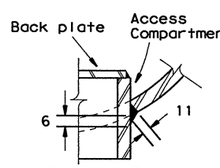


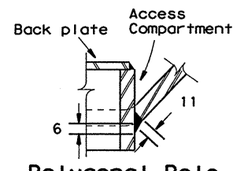
## DETAIL C
(for 5,800 mm pole with no ILSN sign and no luminaire)



## SECTION C-C

Opening for access compartment shall be no more than 2 mm wider than the access compartment itself.

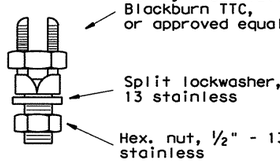




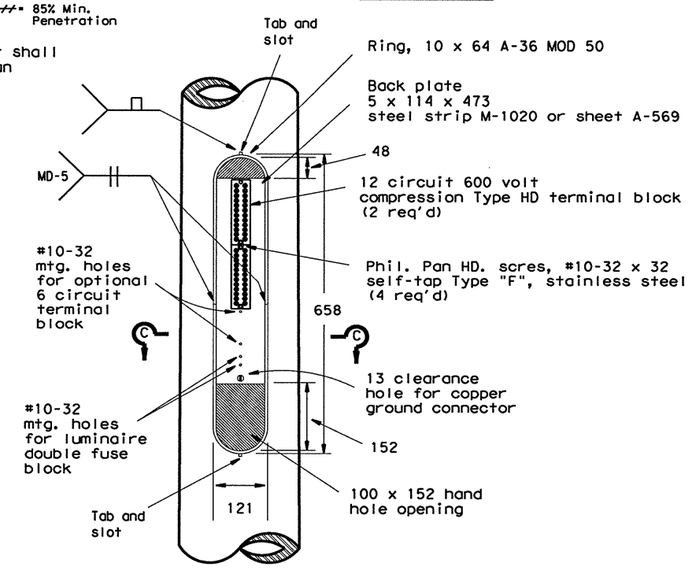
## DETAIL F

## DOUBLE FUSE BLOCK

For luminaire fuses Littelfuse #L60030M-2SQ or equal, supplied and installed by field contractor when required.

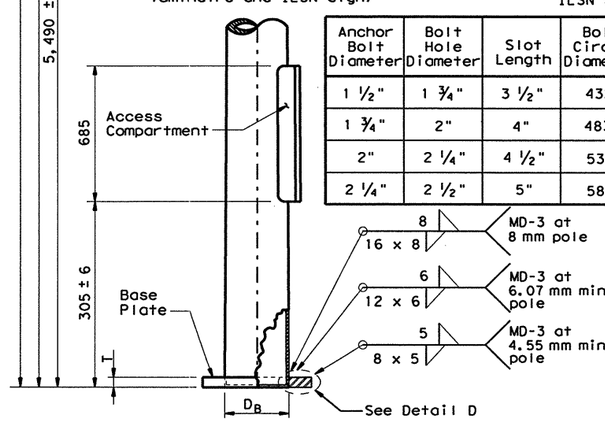


## COPPER GROUND CONNECTOR



## ACCESS COMPARTMENT

1. The cover shall be one piece formed from ABS plastic, shall be a pearl gray color, and shall be suitable for exposure to harsh sunlight and extreme weather. Cover shall latch with two screw latches and shall fit tightly to the enclosure ring to create a rainproof seal. Latch screws shall be 1/4-20 stainless flat socket head screws with tamper proof feature.
2. The pole manufacturer shall provide with each pole a separate kit consisting of: one cover with two latching assemblies, two terminal strips (Marathon #985GP12CU or approved equal), four #10-32 x 32 self tapping type "F" stainless steel pan head screws, and one ground connector (Blackburn TTC, Burndy KC22J12T13, or Ilsco SSS-5). The traffic signal contractor shall install the kit items in the field.
3. The screw hole spacing on the enclosure back plate shall be for two Marathon #985GP12 terminal strips, one Marathon #985GP06CU terminal strip, and one Littelfuse #L60030M-2SQ fuse block. Arrangement of the items shall be as shown in the Access Compartment detail.



## POLE ELEVATION

| Anchor Bolt Diameter | Bolt Hole Diameter | Slot Length | Bolt Circle Diameter | Base ℄ Dim. L x T | Adjust. Range |
|---|---|---|---|---|---|
| 1 ½" | 1 ¾" | 3 ½" | 432 | 460 x 40 | 13.4° |

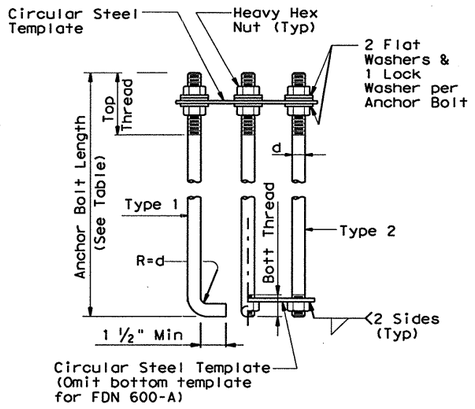
| | | | 8,500 X 8,500 | | |
| | | | 9,800 X 7,300 | 9,800 X 9,800 | |
| | | | | 11,000 X 11,000 | |
| | | | | 12,200 x 7,300 | 12,200 X 11,000 |
| | | | | | 13,400 x 11,000 |

EXAMPLE:

For 130 km/h design wind speed, foundation 750-A can support up to a 9750 mm arm with another arm up to 8530 mm .

For 160 km/h design wind speed, foundation 900-A can support a single 10,970 mm mast arm.

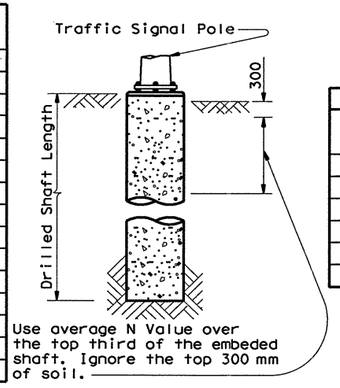


HOOKED ANCHOR (TYPE 1) NUT ANCHOR (TYPE 2)

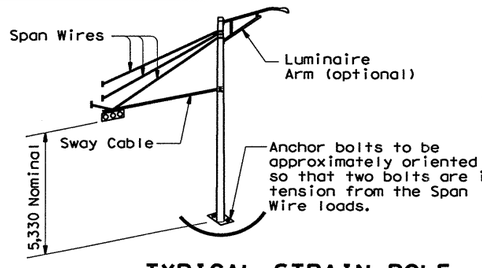
## ANCHOR BOLT ASSEMBLY

**INSTALLATION PROCEDURE:**

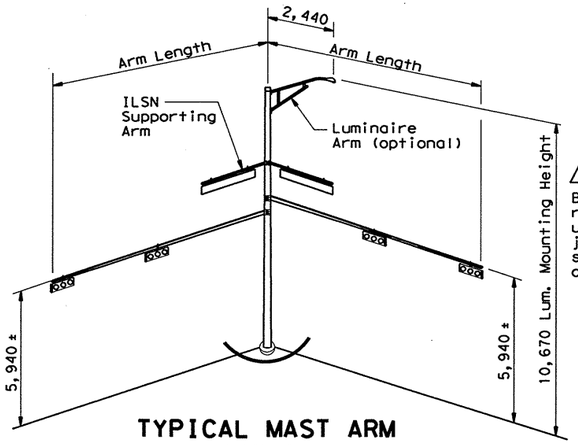
Threads of anchor bolts shall be coated with pipe joint compound prior to installation of upper nuts when erecting pole. After pole is plumbed and in permanent alignment, the exposed threads of painted bolts shall be cleaned and an additional coating of zinc-rich paint applied to seal the bolt thread-nut joint.



Use average N Value over the top third of the embeded shaft. Ignore the top 300 mm of soil.



## TYPICAL STRAIN POLE ASSEMBLY



## TYPICAL MAST ARM ASSEMBLY

## NOTES:

① Anchor bolt design develops the foundation capacity given under Foundation Design Loads.

② Foundation Design Loads are the allowable moments and shears at the base of the structure.

③ Foundations may be listed seperately or grouped according to similarity of location and type. Quantities are for the Contractor's information only.

④ Field Penetrometer readings at a depth of approximately 900 to 1500 mm may be used to adjust shaft lengths.

⑤ If rock is encountered, the Drilled Shaft shall extend a minimum of two diameters into solid rock.

⑥ Decimal lengths in Design Table are to allow interpolation for other penetrometer values. Round to nearest 0.1 m for entry into Summary Table.

### ANCHOR BOLT & TEMPLATE SIZES

| BOLT DIA | ⑦ BOLT LENGTH | TOP THREAD | BOTT THREAD | BOLT CIRCLE | R2 | R1 |
|---|---|---|---|---|---|---|

CHANGE ORDER NO. 59

### GENERAL NOTES:

Design conforms to 1994 AASHTO Standard Spec. for Structural Supports for Highway Signs, Luminaires and Traffic Signals and interim revisions thereto.

Reinforcing steel shall conform to Item 440.

Concrete shall be Class A or C.

Threads for anchor bolts and nuts shall be rolled or cut threads of unified national coarse thread series except for A193M B7 bolts which shall have 8 pitch thread series. Bolts and nuts shall have Class 2A and 2B fit tolerances. Galvanized nuts shall be tapped after galvanizing.

Anchor bolts that are 1" in diameter or less shall conform to ASTM A36M. Anchor bolts larger than 1" in diameter shall conform to A36M Mod380 in accordance with the Item, "Anchor Bolts" or ASTM A193M B7 or A687. Galvanize or coat with zinc-rich paint a minimum of the upper 14 inches of all anchor bolts unless otherwise noted. Exposed nuts shall be galvanized or coated with zinc-rich paint. Washers shall be galvanized. Templates and embeded nuts need not be galvanized.

SHEET 1 OF 2

Note: "All dimensions are in millimeters (mm) except as noted"

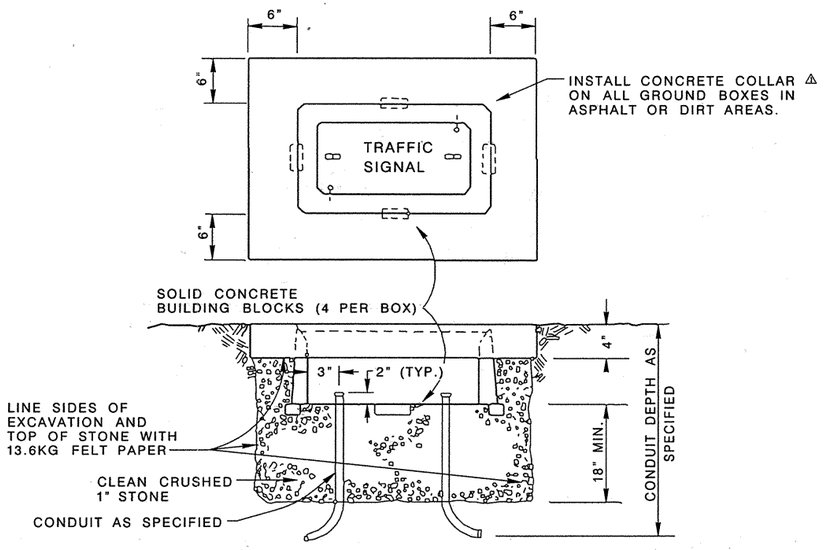
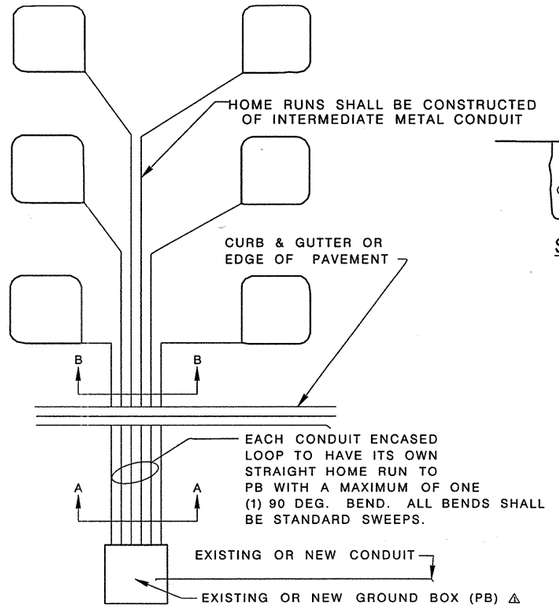
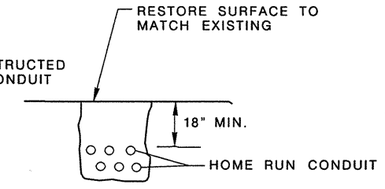
## ⚠ GROUND BOX DETAIL

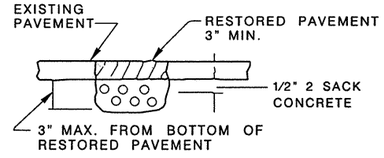


## ⚠ TYPICAL GROUND BOX INSTALLATION DETAIL





SECTION A–A



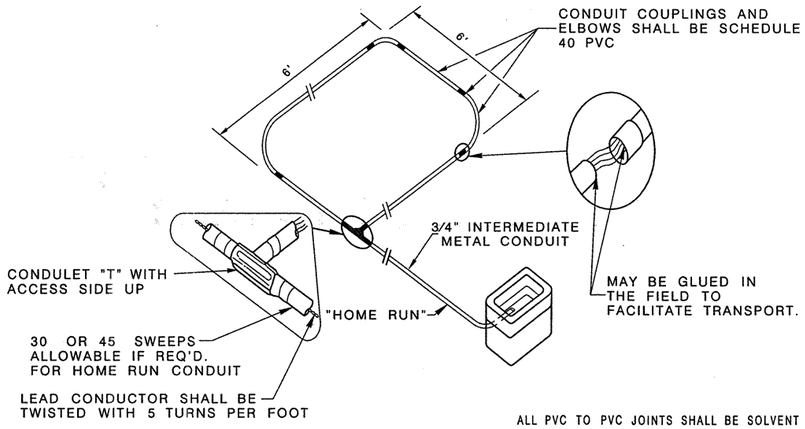
SECTION B–B

## LOOP NOTES

ALL CONNECTIONS BETWEEN THE LOOP WIRE AND SHIELDED LEAD-IN CABLE SHALL BE MADE AS FOLLOWS

A) TIN THE WIRES WITH SOLDER.
B) MAKE A BUTT CONNECTION BETWEEN THE WIRES WITH A TINNED COPPER COMPRESSION FITTING.
C) JOIN THE WIRES AND FITTING WITH SOLDER IN A COMPLETE AND ACCEPTABLE MANNER.
D) TAPE THE CONNECTION WITH AN ACCEPTABLE ELECTRICAL TAPE.
E) SEAL THE CONNECTION IN A RE-ENTERABLE ENCAPSULATING SPLICE KIT.

## CONDUIT ENCASED LOOP DETAILS



ALL PVC TO PVC JOINTS SHALL BE SOLVENT WELD CONNECTED AND WATERPROOF.

1.) CONTRACTOR SHALL INSTALL CONDUIT ENCASED LOOPS AT THE LOCATIONS SHOWN ON THE PLANS USING 3/4" DIAMETER PVC SCHEDULE 40 CONDUIT OR AT NO ADDITIONAL COST 1" DIAMETER PVC SCHEDULE 80 CONDUIT.
2.) LOOP LOCATIONS MAY BE STAGGERED SLIGHTLY (+/-6") TO ACCOMODATE HOME RUN PLACEMENT.
⚠ 3.) INDIVIDUAL HOME RUN CONDUITS SHALL BE EXTENDED TO THE GROUND BOX SHOWN ON THE PLANS FOR EACH LOOP INSTALLED.
4.) ALL LOOP AND HOME RUN CONDUIT SHALL BE PLACED IN COMPACTED SUBGRADE MATERIAL AT 4" TO 6" DEEP AND ALL ROCKS, PROTUSIONS OR IRREGULARITIES WHICH MAY DAMAGE. THE CONDUIT SHALL BE REMOVED.
5.) THE CONTRACTOR SHALL BE RESPONSIBLE TO DEVISE HIS OWN METHOD FOR EXCAVATING FOR LOOPS. ALL AREAS DISTURBED BY THE CONTRACTOR'S OPERATION SHALL BE RESTORED TO THEIR ORIGINAL CONDITION.
6.) ALL LOOPS SHALL BE WOUND FOUR TIMES IN A COUNTER CLOCKWISE DIRECTION.

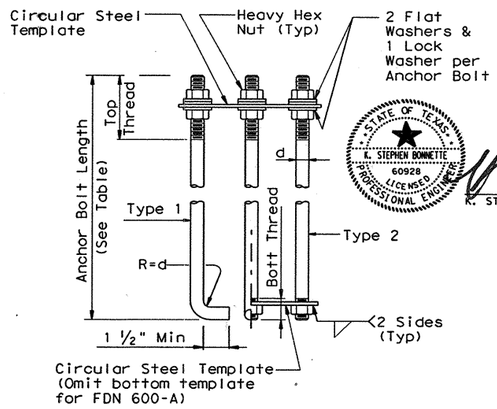
EXAMPLE:

For 130 km/h design wind speed, foundation 750-A can support up to a 9750 mm arm with another arm up to 8530 mm .

For 160 km/h design wind speed, foundation 900-A can support a single 10,970 mm mast arm.

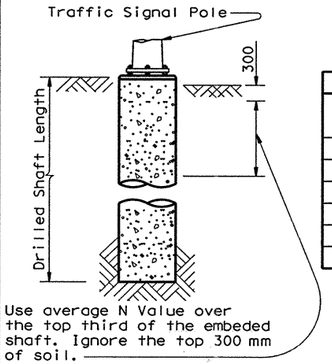


HOOKED ANCHOR (TYPE 1) NUT ANCHOR (TYPE 2)

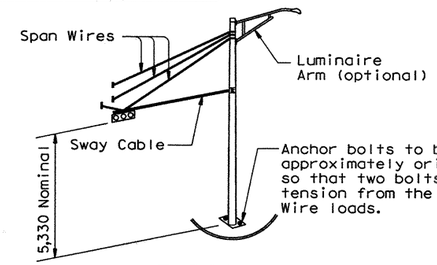
## ANCHOR BOLT ASSEMBLY

### INSTALLATION PROCEDURE:

Threads of anchor bolts shall be coated with pipe joint compound prior to installation of upper nuts when erecting pole. After pole is plumbed and in permanent alignment, the exposed threads of painted bolts shall be cleaned and an additional coating of zinc-rich paint applied to seal the bolt thread-nut joint.

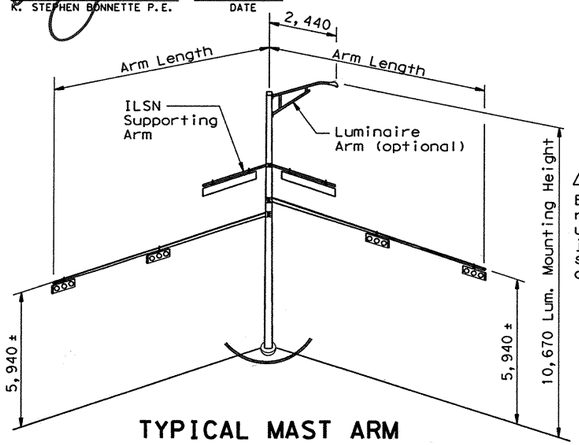


Use average N Value over the top third of the embeded shaft. Ignore the top 300 mm of soil.



## TYPICAL STRAIN POLE ASSEMBLY

K. STEPHEN BONNETTE P.E. 03/12/2003 DATE



## TYPICAL MAST ARM ASSEMBLY

### NOTES:

① Anchor bolt design develops the foundation capacity given under Foundation Design Loads.

② Foundation Design Loads are the allowable moments and shears at the base of the structure.

③ Foundations may be listed seperately or grouped according to similarity of location and type. Quantities are for the Contractor's information only.

④ Field Penetrometer readings at a depth of approximately 900 to 1500 mm may be used to adjust shaft lengths.

⑤ If rock is encountered, the Drilled Shaft shall extend a minimum of two diameters into solid rock.

⑥ Decimal lengths in Design Table are to allow interpolation for other penetrometer values. Round to nearest 0.1 m for entry into Summary Table.

### GENERAL NOTES:

Design conforms to 1994 AASHTO Standard Spec. for Structural Supports for Highway Signs, Luminaires and Traffic Signals and interim revisions thereto.

Reinforcing steel shall conform to Item 440.

Concrete shall be Class A or C.

Threads for anchor bolts and nuts shall be rolled or cut threads of unified national coarse thread series except for A193M B7 bolts which shall have 8 pitch thread series. Bolts and nuts shall have Class 2A and 2B fit tolerances. Galvanized nuts shall be tapped after galvanizing.

Anchor bolts that are 1" in diameter or less shall conform to ASTM A36M. Anchor bolts larger than 1" in diameter shall conform to A36M Mod380 in accordance with the Item, "Anchor Bolts" or ASTM A193M B7 or A687. Galvanize or coat with zinc-rich paint a minimum of the upper 14 inches of all anchor bolts unless otherwise noted. Exposed nuts shall be galvanized or coated with zinc-rich paint. Washers shall be galvanized. Templates and embeded nuts need not be galvanized.

Reinforcing steel shall conform to Item 440.

Concrete shall be Class A or C.

Threads for anchor bolts and nuts shall be rolled or cut threads of unified national coarse thread series except for A193M B7 bolts which shall have 8 pitch thread series. Bolts and nuts shall have Class 2A and 2B fit tolerances. Galvanized nuts shall be tapped after galvanizing.

Anchor bolts that are 1" in diameter or less shall conform to ASTM A36M. Anchor bolts larger than 1" in diameter shall conform to A36M Mod380 in accordance with the Item, "Anchor Bolts" or ASTM A193M B7 or A687. Galvanize or coat with zinc-rich paint a minimum of the upper 14 inches of all anchor bolts unless otherwise noted. Exposed nuts shall be galvanized or coated with zinc-rich paint. Washers shall be galvanized. Templates and embeded nuts need not be galvanized.

CHANGE ORDER NO. 78 -NEW SHEET

Note: "All dimensions are in millimeters (mm) except as noted"

11/99 Revision

① Changed to Facilitate new terminal strip enclosure

② Changed from ground rod to UFER ground

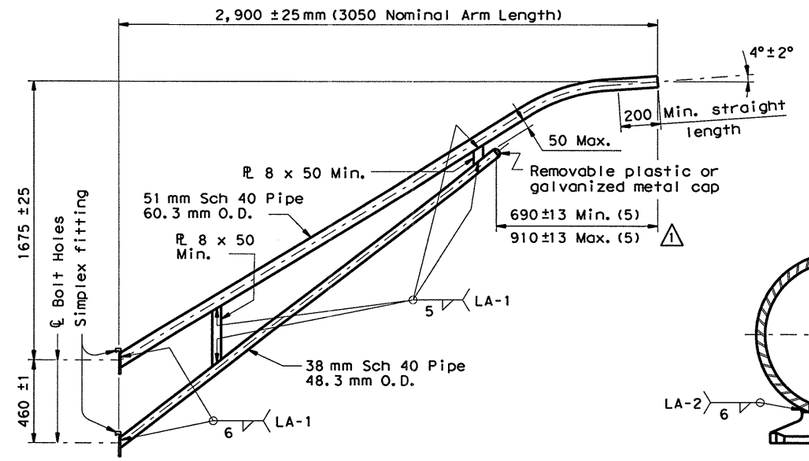
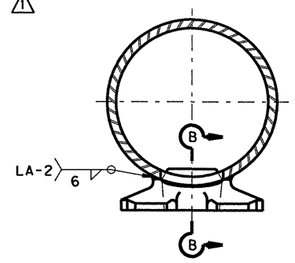
## 2.50 METER LUMINAIRE ARM



## 3.00 METER LUMINAIRE ARM



## DIRECT ATTACHMENT DETAIL

| MATERIALS | |
|---|---|
| Pole or Arm Simplex | ASTM A27M GR 450-240 or A148M GR 550-345 or A576 GR 1021 (4) or A36M (Arm only) |
| Arm Pipes | ASTM A53 GR A or B or A500 GR B or A501 or A595 (2) or A715 GR 345 |
| Arm Plates (3) | ASTM A36M or A572M GR 345 (1) or A595 GR A or A588M |
| Misc. | ASTM designations as noted |

(1) ASTM A36MOD345 steel as described in Item 442 "Metal for Structures" may be used in lieu of A572M GR 345.

(2) If A595 GR A material is used, arm need not be cold worked to A595 requiremants, but material must have 275 MPa minimum yield prior to fabrication.

(3) Either of the materials listed for plates may be used where the drawings do not specify a particular ASTM designation.

(4) A576 must be suitable for forging and also meet minimum tensile strength of 450 MPa, minimum yield of 240 MPa, and elongation in 50 milimeters of 22 percent.

(5) Dimensional limits are given to show acceptable variation in design. All of a Fabricator's production of a particular arm length shall have the same dimensions within specified tolerances.

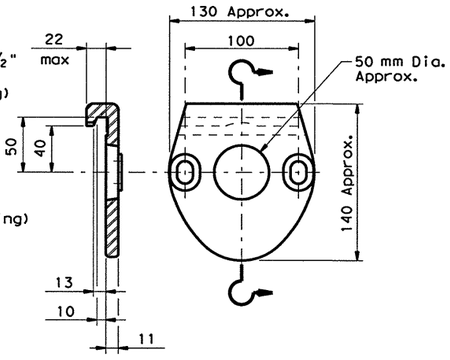
## POLE SIMPLEX DETAIL



## ARM SIMPLEX DETAIL

GENERAL NOTES:

Design conforms to 1994 AASHTO Standard Specifications for Structural Supports for Highway Signs, Luminaires, and Traffic Signals and Interim Revisions thereto. Design Wind Speed equals 145 kmph plus a 1.3 gust factor. Arms are designed to support a 334 N luminaire having an effective projected area (actual area times drag coefficient) of 0.14 sq meter.

Materials and fabrication shall be in accordance with the Specificatons and with the details, dimensions, and weld procedures shown herein. Weld references call for preapproved weld procedures which the Fabricator must obtain prior to fabrication. In the absense of specified fabrication tolerances, dimensions shall be within the tolerances generally obtainable in normal fabrication practice.

Unless otherwise noted, all parts shall be galvanized after fabrication in accordance with the Specifications.

Special designs require submission of shop drawings in accordance with the item "Steel Structures".

Each pole simplex fitting shall be supplied with 2 A325 bolts and 2 lock washers of the size specified. The bolts and lock washers shall be secured to the pole with the other hardware items called for in the plans. When clamp attachment is specified, the Fabricator shall ship the clamp assembly securely attached to the pole at the location shown on the plans.

If clamp assemblies are ordered without poles, the Fabricator shall ship one upper and one lower clamp assembly together in a single package, including all nuts and washers required for the clamps and simplex fittings.

Note: All dimensions are in millimeters (mm) except as noted.

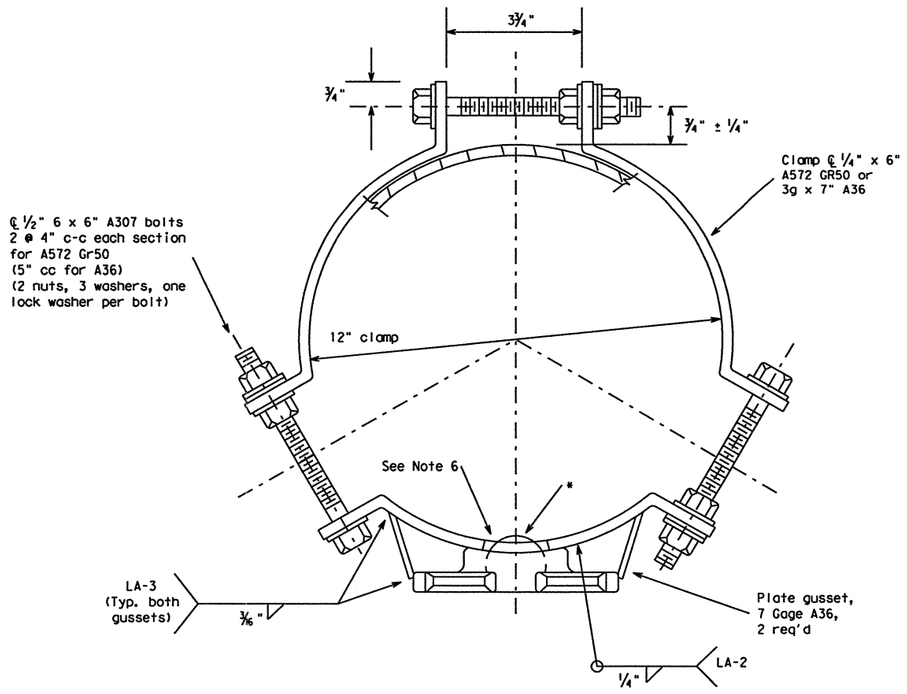
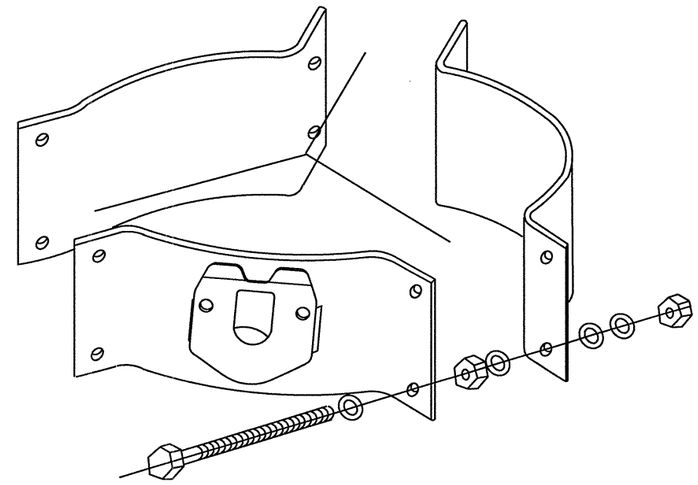
## POLE SIMPLEX DETAILS



## CLAMP DETAIL



## PROJECTION

OTHER MATERIALS:

1. Pole simplex shall be ASTM A27 GR65-35 or A148 GR80-50 or A576 GR1021. ASTM A576 must be suitable for forging and also meet minimum tensile of 65ksi, minimum yield of 35ksi, and elongation in 2 inches of 22 percent.
2. A36M50 steel may be used in lieu of ASTM A572 GR50.
3. Welded tabs and backplates shall be ASTM A-36 steel or better.
4. Nylon insert locknuts shall conform to ASTM A563.

GENERAL NOTES:

1. Materials and fabrication shall be in accordance with the Specifications and with the details, dimensions, and weld procedures shown herein. Weld references call for preapproved weld procedures which the Fabricator must obtain prior to fabrication. In the absense of specified fabrication tolerances, dimensions shall be within the tolerances generally obtainable in normal fabrication practice.
2. All parts shall be galvanized after fabrication in accordance with ASTM 153 or 123. The throat of the Simplex shall be made free of all rough or sharp edges resulting from the galvanizing process.
3. Each simplex fitting shall be supplied with 2 ASTM A325 bolts, 1/2in. X 1 1/2in. and 2 lock washers. The bolts and lock washers shall be secured to the clamp with the other hardware items. The Fabricator shall ship clamp assembly together in a single package, including all bolts, nuts, and washers required for the clamp and simplex fitting.
4. Design conforms to 1985 AASHTO "Standard Specifications for Structural Supports for Highway Signs, Luminaires, and Traffic Signals" and interim revisions thereto. Design Wind Speed equals 80 mph plus a 1.3 gust factor. Clamps are designed to support a 75 lb. luminaire having an effective projected area (actual area times drag coefficient) of 1.4 sq.ft.,12 ft. maximum arm length.
5. Each assembly shall consist of one upper piece simplex fitting having a smooth lip and one lower piece simplex fitting with the lip removed.
6. Approximately 2 in. diameter hole in upper mast arm clamp.

For 8.9 - 12 inch diameter Signal Poles
(Two req'd for each mast arm)

DISCLAIMER
The use of this standard is governed by the "Texas Engineering Practice Act". No warranty of any kind is made by TxDOT for any purpose whatsoever. TxDOT assumes no responsibility for the conversion of this standard to other formats or for incorrect results or damages resulting from its use.

GENERAL:

I. SCOPE

Details herein apply to roadway lighting installations bid under the following Specification Items: Roadway Illumination Assemblies, Relocate Roadway Illumination Assemblies, Foundations for Signs, Traffic Signals and Roadway Illumination Assemblies, and Special Specifications relating to roadway lighting. All work, materials and services not shown on the plans which may be necessary for complete and proper construction shall be performed, furnished and installed by the Contractor. Faulty fabrication or poor workmanship in any material, equipment or installation will be considered justification for rejection. Material and installation shall comply with the applicable provisions of the National Electrical Code, National Electrical Manufacturers Association and, when required, Underwriters Laboratories standards. Where manufacturer's provide warranties or guarantees as a customary trade practice, Contractor shall furnish to the State such warranties or guarantees. 2

The location of poles and fixtures are diagrammatic only and may be shifted by the Engineer to accommodate local conditions. Erection and/or removal of poles and luminaires located near overhead electrical lines shall be accomplished using established industry and utility safety practices and in accordance with laws governing such work. The Contractor shall consult with the appropriate utility company prior to beginning such work.

II. ROADWAY ILLUMINATION ASSEMBLIES

A. General

1. Structural Support Design for Luminaires. Lighting standards shall be designed in accordance with the latest issue of the AASHTO "Standard Specifications for Structural Supports for Highway Signs, Luminaires and Traffic Signals." All poles shall be designed for 129 km/h wind loads. An additional 1.3 gust factor shall be applied to the wind loads. For transformer base poles, fabricator shall include transformer base and connecting hardware in design calculations and shop drawing submittals. Manufacturer's shop drawings shall include the ASTM designations for all material to be used. See paragraph II. B. for additional requirements for the transformer base.

2. Slip Joint Poles. Poles may be fabricated in two sections and field-assembled by the lap-joint method. The two sections shall telescope together with a lap length of not less than 1-1/2 times the shaft diameter at the lap joint. The longitudinal seam weld on the outer shaft at the slip joint end shall be a full penetration weld for a minimum of the slip joint length plus 152 mm.

3. Mast Arm Attachments. All poles and attachments shall be structurally designed to support two 3.5 meter mast arms and luminaires. Poles shall be supplied with mast arm combinations as shown in the plans. All mast arms shall be designed for a 245 N luminaire having an effective projected area of 0.130 square meters. 1

4. Minor Damage Repair. The finished pole shall have a smooth, uniform finish free of pits, blisters, or other defects. Scratched, chipped, or damaged areas on galvanized poles and mast arms shall be thoroughly cleaned by wire brushing. The cleaned area shall be painted with two coats of zinc rich paint containing a minimum of 84% metallic zinc.

5. Pole Bonding Means. All shoe base poles, including poles on concrete traffic barriers, shall have a grounding lug with 1/2-13 NC female threads inside the pole near the hand hole, minimum of 3 full threads.

6. Hand Holes. All shoe base poles shall have hand holes with reinforcing frames and covers. The openings on all poles shall be approximately 102 mm x 254 mm located approximately 254 mm from the bottom of the pole and, except for poles mounted on concrete traffic barrier, shall be placed 90 degrees to mast arm unless otherwise noted on the plans. For poles mounted on concrete median barrier, all hand holes shall be on the same side of the median.

7. CTB Poles. Poles installed on concrete traffic barrier shall also meet the requirements of CTB details.

8. J-Hooks. All poles shall be equipped with a J-hook inside the pole, near the top for supporting vertical conductors.

9. Base Plate Bolt Circle. Bolt circles for poles mounted on CTB, see CTBI (4) or SSCB (4). Poles placed on existing bridge brackets or existing foundations, bolt circle shall be coordinated with anchor bolts in place. For other bolt circles, See RID (3).

10. Steel Poles.

a. Steel poles shall be fabricated in accordance with the Item "Steel Structures." Longitudinal seam welds for pole sections shall have 60% minimum penetration, except that weld shall be full penetration within 152 mm of circumferential base plate welds. All welding shall be in accordance with the ANSI/AWS Structural Code D1.1. Two-section poles joined by circumferential welds will not be permitted, unless otherwise shown on the plans. Unless otherwise shown on the plans, poles and hardware shall be galvanized in accordance with Item 445, "Galvanizing".

b. Pole components shall be constructed using the following materials:

Shaft: ASTM A-572 Grade 50 or ASTM A-595 Grade A (345 MPa min. yield) or ASTM A36M50.

Base Plate: ASTM A-27 Grade 65-35 or ASTM A-36.

Mast Arm Connector: ASTM A-27 Grade 65-35.

Mast Arms: Steel pipe ASTM A-53 Grade A or B or ASTM A-501 with 20% elongation in 51 mm or A-513 TY I with minimum 205 MPa yield and 15% elongation in 51 mm.

Pole Cap: Pole cap shall be zinc die-cast, aluminum, or galvanized metal, secured by three stainless steel or galvanized screws.

Pole Hardware: All bolts except mast arm connection bolts shall be stainless steel or standard steel galvanized ASTM A-153 Class C or D, or B-695 Class 50. Mast arm connection bolts shall be ASTM A-325, ASTM A-321 or ASTM A-193 Grade B-7, galvanized as above. Nuts and washers shall be compatible with the bolts and shall be stainless steel or steel, galvanized as above. Lock washers shall be provided on all bolted connections.

11. Aluminum Poles.

a. Aluminum poles shall be fabricated in accordance with "Structural Welding, Aluminum" ANSI/AWS D1.2.

b. Pole components shall be constructed using the following material:

Shaft: ASTM B-221 or B-241 Alloy 6063-T6. ASTM B-209 Alloy 5086-H34. ASTM B-221 Alloy 6005-T5.

Base Flange: ASTM B-26 Alloy 356.0-T6 or ASTM B-108 Alloy A356.0-T6 (Structural strength test required).

Mast Arm Fitting: ASTM B-209 Alloy 6061-T6 or ASTM B-221 Alloy 6005-T5.

Mast Arms: ASTM B-241 Alloy 6061-T6 or Alloy 6063-T6.

Pole Cap: ASTM B-209 Alloy 5086-H32 or ASTM B-108 or B-26 Alloy 356.0-T6.

Bolts: Stainless Steel AISI 300. Bolts threading into aluminum threads shall be treated with anti-seize compound, Never-Seez Compound, Permatex 133K or equal.

12. Alternate material equal to or better than material specified may be substituted with the approval of the Engineer.

13. Installation of high Strength Bolts. The tightening of nuts on high strength bolts shall be in accordance with the Item "Structural Bolting."

14. Roadway Illumination Assembly poles shall be erected plumb and true. Top of foundation shall be struck level so the pole will be plumb. Shoe base poles may use leveling nuts to plumb pole. Shims and leveling nuts shall not be used under transformer bases. Grout shall not be placed between base plate or flange and the foundation. 2

15. In each pole, continuous color-coded stranded No. 12 AWG copper Type XHHW or other approved XLP conductors shall be connected to the line side of each ballast.

16. Acorn nuts will not be allowed for attaching pole to transformer base or foundation. Nut covers will not be allowed.

17. Fabrication tolerances shall be as shown on Fabrication Tolerances Table.

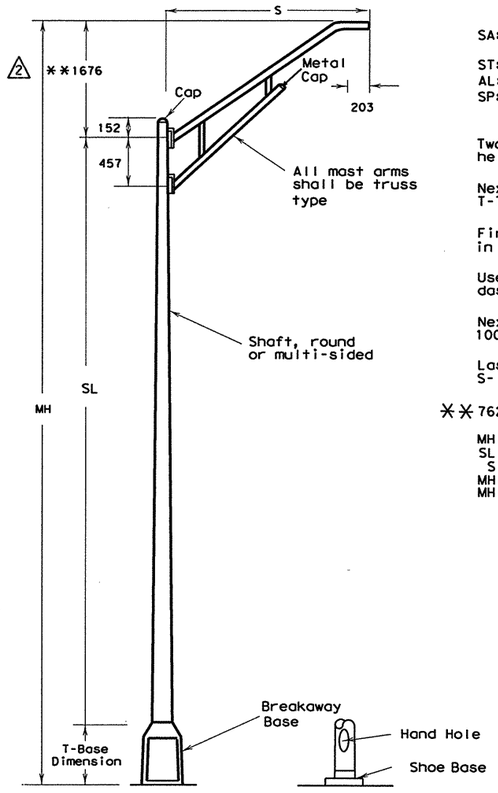
MAST ARM TO POLE SHAFT CONNECTION



ROADWAY ILLUMINATION ASSEMBLY

EXPLANATION OF ROADWAY ILLUMINAION ASSEMBLY DESIGNATIONS

(TYPE SA 15 T - 3 - 33 (.4KW) S

SA: Pole and mast arm may be steel or aluminum.
ST: Pole and mast arm must be steel.
AL: Pole and mast arm must be aluminum.
SP: Special (ovalized) steel pole for installing on CTB. See standard sheet CTBI (4).

Two numerical digits denote mounting height in meters.

Next letter denotes type of base, (S- Shoe Base, T-Transformer Base or X-Base, B-Shoe Base Bridge Mount)

First number denotes length of mast arm in meters.

Use of second mast arm is indicated by second dashed number which denotes length in meters.

Next three figures indicate luminaire rating (1 KW= 1000 watts, .4 KW= 400 watts, etc.)

Last letter indicates the type of lamp (M- Mercury, S- High Pressure Sodium, L- Low Pressure Sodium).

** 762 mm for poles with 1 m mast arms.

MH = Mounting Height
SL = Shaft Length
S = Spread (Mast arm length)
MH = SL + 1524 + (T-Base dimension)
MH = SL + 1524 (Shoe Base)

All dimensions are in millimeters unless otherwise noted.

1 8-98, corrected dimensions

2 10-98: change mast arm rise, rearrange notes; shims not allowed under T-base

DISCLAIMER
The use of this standard is governed by the "Texas Engineering Practice Act". No warranty of any kind is made by TxDOT for any purpose whatsoever. TxDOT assumes no responsibility for the conversion of this standard to other formats or for incorrect results or damages resulting from its use.

II. ROADWAY ILLUMINATION ASSEMBLIES (cont.)

B. Transformer Base

1. Transformer base shall be cast from aluminum, ASTM B-108 or B-26 Alloy 356.0-T6, or other material approved by the Engineer, and shall be furnished with eight 1/2 inch flat washers as recommended by the manufacturer. Transformer base bolt circles (Top and Bottom) shall match bolt circles for poles and foundations shown on RID (3).

2. Transformer base shall be approximately 375-500 mm high and shall have a door approximately 330 mm x 203 mm x 235 mm or as otherwise approved by the Engineer. Screw or bolts for attachment of door to base shall be stainless steel. Four machine bolts with four nuts, eight 1/2 inch flat washers and four lock washer, galvanized ASTM A-153 Class C or D, or B-695 Class 50, shall be provided with each transformer base for connecting the pole. Bolts shall be ASTM A325 or approved equal. Nuts shall be ASTM A-563 grade DH galvanized. A 1/2-13 NC female threaded grounding lug shall be provided inside the transformer base near the bottom.

3. The X-base shall be made from extruded aluminum channel and aluminum plate. The base breakaway features shall rely on bolt shear and not on bolt torque. Bolt shall have torque controlled break-off hex-head. Bolt shall be Aluminum Association type 2024-T4 aluminum. X-base channel shall be connected with aluminum bolts. Bolt shall be left hand thread and shall not be interchangeable with any other bolt not designed specifically for use with the X-base.

4. All breakaway bases shall meet the breakaway requirements of the AASTHO "Standard Specifications for Structural Supports for Highway Signs, Luminaires and Traffic Signals," latest edition, and shall have been tested by FHWA-approved methods. All bases shall have been structurally tested to meet or exceed the full designed plastic moment capacity of the pole. Certification of the plastic moment load test and FHWA breakaway requirement test of the model of base being furnished shall be submitted with shop drawings. Shop drawings shall show breakaway base model number and manufacturer's name or logo.

5. Bases shall be stamped, incised or by other approved permanent means, marked to show fabricators name or logo, and model number. Such information shall be placed in a readily seen location, inside or outside the base, but shall not be placed on the door.

6. Doors for transformer bases shall be made of plastic, fiberglass or other non-aluminum material approved by the Engineer. Transformer bases shall be cleaned by grit blast cleaning after heat treatment. Certification by the manufacturer of heat treatment shall be furnished with transformer bases. The certification shall show the metal alloy and temper and that the base meets those requirements, chemical and physical. The certification shall also show the material ASTM specification. Transformer bases shall be cast with a removable tab bar for material testing. Some bars may have been removed by the manufacturer for testing.

C. All Luminaires.

1. The luminaire housing shall be cast or drawn from a non-ferrous alloy and shall be free of cracks and excessive porosity. All nuts, screws, clips, washers and attaching hardware shall be made of stainless steel; steel electro-zinc-plated, minimum thickness 0.005 mm with olive green drab or yellow chromate conversion coating; steel coated with an acidic chromate-phosphate-binder system primer, top coated with a polytetrafluoroethylene modified silicon primer, bright metallic in color, meeting the requirements of General Motors automotive specification GM 164M; or other approved conversion coatings except that brackets may be made from pre-galvanized steel. All threaded surfaces used in the housing shall be lubricated with a silicone grease.

2. The slipfitter shall securely clamp the luminaire to the mast arm. A positive means of vertical adjustments shall be provided. The refractor or lens shall be clear glass. The optic assembly shall be provided with resilient gaskets and so constructed that a positive seal against weather and other contaminants will be maintained. The latch shall provide a positive means of maintaining closure of the luminaire. The socket shell shall be nickel plated and shall be rigidly attached to a high grade porcelain mogul base which shall extend and enclose the metal shell. A locking means shall be incorporated in the shell of the socket to positively resist the removal of the lamp. Reflectors shall be polished aluminum with Alzak or equal coating and shall not be painted.

3. Mast-arm mounted luminaires shall be provided with a leveling indicator which is clearly visible from the ground. Leveling indicator shall be sensitive to one (1) degree (maximum) changes in position at any point within five (5) degrees (minimum) level position. Unless otherwise directed by the Engineer, mast-arm mounted luminaires will be installed in the level position.

4. Underpass luminaires shall be fused internally. Fuses shall be 10 amp time-delay type.

⚠1 5. The Contractor may be responsible for fixture testing costs. See Materials and Tests Section test method TEX-1110-T.

6. The Contractor shall furnish six (6) sets of submittals of the luminaire fuxture to the Engineer at the project address. These submittals shall be approved by the Engineer before the Contractor begins work.

⚠1 D. High Pressure Sodium Vapor Luminaires

1. Photometrics

a. The U/P (SPL-CO) (.15KW)S (TY 1) and (TY 2) underpass luminaires shall be 150 watt high pressure sodium, IES TYPE M-C with flat tempered glass lens. The fixtures shall provide a minimum measured intensity of 2.16 lux in a rectangular area measuring 36.58 meters x 9.15 meters, when mounted 6.1 meters above the midpoint of either long side of the surface area.

The maximum to minimum horizontal illuminance uniformity ratio shall not exceed 25:1 within the above mentioned rectangular area.

b. The 250-watt mast arm mounted luminaire shall be IES Type full cutoff and, when mounted 12.2 meters above the midpoint of either long side of a rectangular area 57.93 meters by 13.72 meters, shall provide a measured minimum intensity of 2.16 lux at any point on the surface of this area. Light intensities measured in lux along a line parallel to and 6.1 meters in from the long side of the previously defined rectangular area above which the luminaire is mounted shall decrease at a rate not to exceed 5.38 lux in any 3.1 meter interval along the aforementioned line from 3.1 to 27.4 meters on both sides of the luminaire and shall not be less than 3.23 lux at any point along such line.

The maximum to minimum horizontal illuminance uniformity ratio shall not exceed 15:1 within the above mentioned rectangular area.

c. The 400-watt mast arm mounted luminaire shall be IES Type full cutoff and, when mounted 15.2 meters above the midpoint of either long side of a rectangular area 67.1 meters by 18.3 meters, shall provide a measured minimum intensity of 2.16 lux at any point on the surface of this area. Light intensities measured in lux along a line parallel to and 9.2 meters in from the long side of the previously defined rectangular area above which the luminaire is mounted shall decrease at a rate not to exceed 5.38 lux in any 3.1 meter interval along the aforementioned line from 3.1 to 27.4 meters on both sides of the luminaire and shall not be less than 3.23 lux at any point along such line.

The maximum to minimum horizontal illuminance uniformity ratio shall not exceed 15:1 within the above mentioned rectangular area.

d. The luminaires shall meet the photometric requirements shown above, when energized at 100 percent of rated line voltage. Test will be run with the fixture in the level position as indicated on leveling indicator.

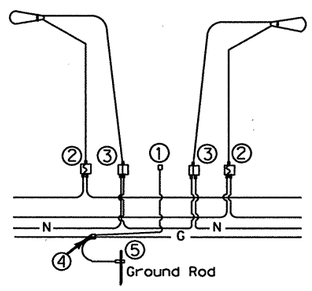
LUMINAIRES SERVED AT 480V ON 240/480 VOLT SERVICE OR LUMINAIRES SERVED AT 240V FOR FOR 120/240 VOLT SERVICE.



**FOUR-WIRE CIRCUIT-CENTER GROUNDED**
LUMINAIRES SERVED AT 240V (240/480 VOLT SERVICE)

NOTES:

(1) Pole Bonding Connector Blackburn TTC3 or Weaver TGC3 or equal.

(2) Fused Connector-All electrical connectors for breakaway poles shall be watertight and shall be designed as breakaway (Buchannan 65U, Bussmann HEBW, Littelfuse LEB or equal). All fuses shall be time-delay types. 10 Amp (Littelfuse FLQ, Bussman RNQ or equal).

(3) Un-fused Connector-All electrical connections for neutrals shall be watertight. For breakaway poles, connections shall be designed as breakaway, shall have a white color marking, and shall have a permanently installed solid neutral (Buchannan 20U, Bussmann HET, Littelfuse LET or equal). Dummy/Neutral fuse shall be Bussman NTS-R-3 or equal.

(4) Split Bolt or other connector.

(5) Ground Rod Clamp - Blackburn GG58H, Burndy GKP635, or equal.

*For Transformer Base Poles. On Shoe Poles omit un-fused connector for neutral conductor.

All dimensions are in millimeters unless otherwise noted.

II. ROADWAY ILLUMINATION ASSEMBLIES (cont.)

D. High pressure Sodium Vapor Luminaires (cont.)

2. Ballasts

a. All ballasts shall be isolated-winding lag-type magnetic regulators designed to operate high pressure sodium lamps unless otherwise shown on the plans.

b. When the circuit voltage indicated on the plans is applied, the ballast input wattage during fluctuations of the test voltage of +10 and -10 percent shall not exceed the following;

| Nominal Lamp Rating, Watts | Maximum Wattage Input |
|---|---|
| 150 | 220 |
| 250 | 440 |
| 400 | 552 |

c. During fluctuation of the test voltage of +10 and -10 percent, the lamp wattage fluctuation shall not exceed a total of 20 percent and ballast shall maintain lamp wattage within the following limits:

| Nominal Lamp Watts | Minimum Lamp Watts | Maximum Lamp Watts |
|---|---|---|
| 150 | 110 | 180 |
| 250 | 175 | 370 |
| 400 | 280 | 475 |

d. The power factor of any ballast when tested at the circuit voltage indicated in the plans shall be not less than 90 percent.

e. The electronic starting aid shall provide a starting pulse with an amplitude of 2500 volts minimum, 4000 volts maximum. The pulse width shall be a minimum of 0.8 microseconds at 2250 volts. The pulse shall occur when the open-circuit voltage is equal to or greater than 90 percent of peak open-circuit voltage. Pulse repetition rate shall be a minimum of one per cycle and pulse current shall be a minimum of 0.18 amperes. Electronic starting aids for mast-arm mounted poles shall be replaceable without the use of tools. The starting aid shall discontinue to pulse when the lamp starts.

f. Luminaires will be tested for satisfactory operation of the starter board under open-circuit (lamp-out) condition for a minimum of 72 hours. Any failures of starter boards will be considered grounds for rejection of the model starter board being supplied.

g. Ballasts shall permanently and clearly indicate the following: lamp type, catalog number, voltage rating, connection diagram, and manufacturer. Capacitors in all luminaires shall be non-PCB type.

3. Lamps

a. All lamps shall be new and shall be of recent manufacture.

b. 150 watt lamps shall be rated for 55 volts.

c. High pressure sodium lamps shall meet ANSI C78 requirements and shall be the type that extinguishes at the end of usable lamp life and remains extinguished without cycling. 400 watt lamps shall contain less than 4.0 mg of mercury, 250 watt lamps shall contain less than 3.0 mg of mercury. Lamps shall be lead free and shall pass the Federal Toxic Characteristic Leachate Procedure (TCLP).

4. Testing

a. Ballasts and luminaires will be tested using a lamp furnished for the same project.

b. Luminaires, ballasts, and lamps will be sampled and tested in accordance with the TXDOT Materials and Test Section's Manual of Testing Procedures.

III. ROADWAY ILLUMINATION ASSEMBLY FOUNDATIONS

A. Foundations will be paid for under the Item "Foundations for Signs, Traffic Signals and Roadway Illumination Assemblies", unless otherwise shown on the plans. Top 152 mm of foundation shall be formed and struck level.

B. Anchor bolts for all poles, except CTB-mounted poles, shall be A-36M55 Anchor Bolts. Anchor bolts for CTB mounted poles shall be steel, ASTM A-325 or A-321 threaded rod. Nuts for CTB anchor bolts shall be ASTM A-563 Grade D heavy hex, galvanized. The top 203 mm of all anchor bolts shall be galvanized per ASTM A-153. Anchor bolts in foundations shall be 1 1/4 inches x 30 inches for mounting heights 12 meters and greater, 1 inch x 30 inches for mounting heights less than 12 meters.* Anchor bolts shall have top end threaded not less than 127 mm and furnished with galvanized hex nuts, 1/2 inch flat washers (T-base), lock washers (shoebase) and template. The lower end of the bolt shall be threaded and furnished with nut and template. When bolts with rolled threads are furnished, bolt body need not be full size. See CTB and SSCB details for anchor bolts in concrete traffic barriers. Anchor bolts and nuts shall have Class 2A and 2B fit. Nuts shall be tapped and chased after galvanizing.

C. Concrete shall be Class A or C.

D. A minimum of two conduits shall be installed in each foundation. See lighting layout sheets for locations of foundations with more than two conduits. Any unused conduits in foundations shall be capped on both ends.

E. Unless otherwise dimensioned on the plans, breakaway roadway illumination assemblies should be located as shown in the placement table. Non-breakaway illumination assemblies should be protected from vehicular impact (i.e. 610 mm behind guard rail or mounted atop traffic barrier) or located outside the clear zone, except that 762 mm from curb face is minimum desired for light poles on city streets, 45 mph or less, see design guidelines for further information.

F. Anchor bolt template shall not be supplied with flat washers. Transformer base shall be held with 1/2 inch thick washers and nuts supplied with base. No washers or shims shall be used under transformer base.

G. Riprap shall be placed around the foundation when called for elsewhere in the plans.

H. Conduit location in foundation is critical for new style breakaway devices. Conduits shall be placed 50 mm apart on centerline as shown in foundation details.

* Except that anchor bolts shall be 1 inch x 30 inches for all X-base poles.

| Breakaway Pole Placement, see Para. III. E. | |
|---|---|
| Roadway Functional Classification | ** Pole Offset (distance to transformer base, tolerance + 150mm-0mm) |
| Freeway mainlanes (roadways with full control of access) | 4.5 m (minimum and typical) from lane edge |
| All curbed, 45 mph or less design speed | 750 mm minimum (4.5 m desirable) from curb face |
| All others | 3 m minimum* (4.5 m desirable) from lane edge |

*or as close to ROW line as is practicable

**all breakaway poles should have 2/5 of the luminaire mounting height behind the pole for "falling area" to prevent encroachment on other travel lanes. See design guidelines.

| PAY QUANTITY OF RIPRAP PER FOUNDATION | | |
|---|---|---|
| FOUNDATION DIAMETER | RIPRAP DIAMETER | RIPRAP (CONC)(CL A) |
| 750 mm | 1950 mm | 0.255m3 |

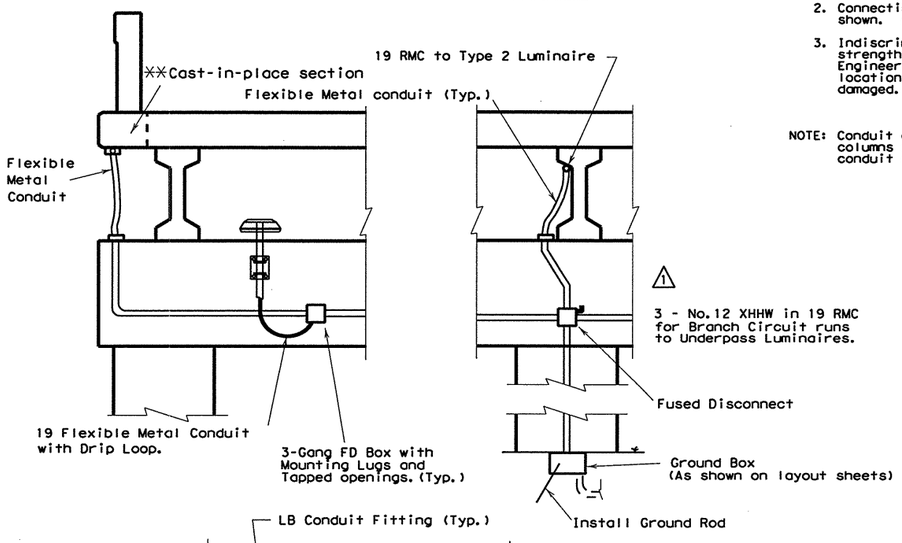
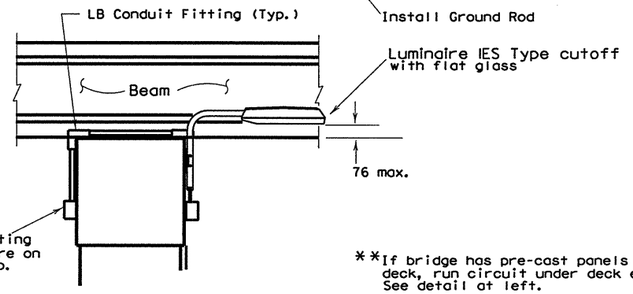
## UNDERPASS LIGHTING ARM TYPE 1





**If bridge has pre-cast panels under deck, run circuit under deck edge. See detail at left.

U/P (SPL-CO)(.15 KW)S(TYPE 1)

NOTES:

A. ALL LUMINAIRES

1. Luminaire locations, conduit and conductor sizes and routing are typical and diagrammatic only. See project layout sheets for specific details.
2. All conductors and conduit will be paid for under the items "Conduit" and "Electrical Conductor", unless otherwise shown on the plans. See lighting layout sheets.
3. A ground rod shall be installed and attached to the equipment grounding conductor in all ground boxes containing conduit that extends above grade six inches or more. All RMC in these boxes shall have grounding bushings and shall be properly bonded.
4. Adjust conduit in saddles to place fixture height and orientation as required. See fixture orientation detail and layout sheet. Where practicable place luminaires so that bottom of luminaire is above bottom of beam, maximum of 75 mm. (See detail.)
5. All bolts, nuts and washers shall be galvanized, ASTM A-153.
6. Fabrication of brackets and support arms will not be paid for directly but shall be subsidiary to Item 610, "Roadway Illumination Assemblies."
7. ⚠1 A Heavy Duty, 480 volt or 600 volt, 30 amp fused disconnect switch in NEMA 3R enclosure shall be installed in circuits to switch underpass luminaires. Switch shall be mounted 10 feet (minimum) above grade on columns or bent caps as approved by the Engineer. Contractor shall modify switch to allow padlocking in the "ON" and in the "OFF" positions. 20 amp fuses shall be installed. Furnishing and installing disconnect switches for underpass lighting fixtures shall not be paid for separately but shall be subsidiary to the various bid items of the contract.

B. TYPE 1

1. Type 1 arm shaft shall be 38 mm rigid metal conduit (48.26 mm O.D., 3.683 mm wall).
2. Anchor bolts for Type 1 luminaire shall be 3/8 inch bolt or stud expansion anchors with minimum pull out of 13.35 kN each, with 102 mm minimum embedment, and lock washers.
3. Attach conduit to plate with 4 saddles, four 3/8" (min.) bolts, HHN & LW.

C. TYPE 2

1. Type 2 arm shaft shall be 50 mm rigid metal conduit (60.325 mm O.D., 3.912 mm wall). Reduce conduit length for Type C concrete beams. Field cutting and threading will be permitted. Paint cut and threaded areas with zinc rich paint after conduit is connected to adjacent fitting.
2. Connecting conduit may be strapped to tapered section only of precast beams as shown. Anchor as approved by the Engineer. Maximum anchor depth is 25 mm.
3. Indiscriminate drilling into precast concrete beams may result in reduced beam strength. Drilling location and method shall be only as directed by the Engineer. See location of underpass lighting mounting bracket detail. The locations given in the table are such that reinforcing strands will not be damaged.

NOTE: Conduit on Columns, Caps, and Slab is shown surface mounted. For all new columns and caps, Contractor shall embed conduit in concrete. Embedded conduit shall be PVC. Metal junction boxes and conduit shall be grounded.

DISCLAIMER
The use of this standard is governed by the "Texas Engineering Practice Act". No warranty of any kind is made by TxDOT for any purpose whatsoever. TxDOT assumes no responsibility for the conversion of this standard to other formats or for incorrect results or damages resulting from its use.

## I. GENERAL REQUIREMENTS FOR ALL ELECTRICAL WORK

The location of all conductors, conduits, junction boxes, ground boxes, electrical services and transformer stations is diagrammatic only and may be shifted by the Engineer to accommodate local conditions.

Materials shall be new and unused, and materials and installation shall comply with the applicable provisions of the National Electrical Code (NEC) and National Electrical Manufacturers Association (NEMA) standards and be Underwriters Laboratories (UL) Listed. Faulty fabrication or poor workmanship in any material, equipment or installation shall be justification for rejection.

**SUBMITTALS:**

The contractor shall submit for approval no less than five (5) copies of catalog cut sheets on electrical services, ground boxes, including loading capicity certification, breakaway disconnects, heat shrink tubing and heat shrink filler tape, photocells, and, when required, verification of available fault current. Submittals shall be legible and shall be marked to indicate which product on a cut-sheet is to be supplied. Where manufacturers provide warranties and guarantees as a customary trade practice, Contractor shall furnish to the State such warranties or guarantees.

Grounding shall be as shown on the plans and in accordance with the NEC. Metallic conduit, lighting poles and luminaires on bridge structures shall be bonded to the system grounding conductor and to a ground rod in each ground box or junction box at the bridge ends, and in each ground box installed for underpass lighting. The grounding conductor shall be bare or, if insulated, shall be green. Ground rods, connectors, and bonding jumpers will not be paid for separately, but will be subsidiary to the various bid items.

## II. CONDUIT

### A. MATERIALS

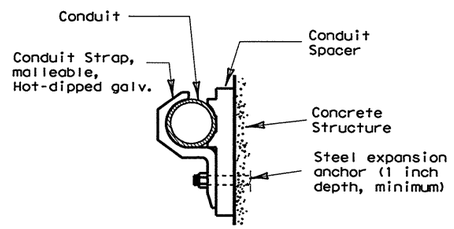
1. Conduit and fittings shall be UL Listed for the intended use shown on plan sheets.
2. Neither aluminum conduit, electrical metallic tubing (EMT), nor intermediate metal conduit (IMC) shall be permitted as a substitute for rigid metal conduit (RMC).
3. All exposed conduits shall be (RMC), unless otherwise specifically shown on the plans.
4. Fittings for RMC shall be steel or malleable iron, threaded, or threadless compression type, rain-tight, and shall be UL Listed for the intended use.
5. Expansion joints for metallic conduit shall be Appleton UNYL 50 Series, OZ/Gedney AX Series, or equal.
6. Junction box minimum sizes shall be in accordance with the following table which applies to the greatest number of conductors entering the box through one conduit with no more than four conduits per box. When a mixture of conductor sizes is present, the conductors shall be counted as if all are of the larger size. Situations not applicable to the table shall be sized in accordance with NEC 370-28.

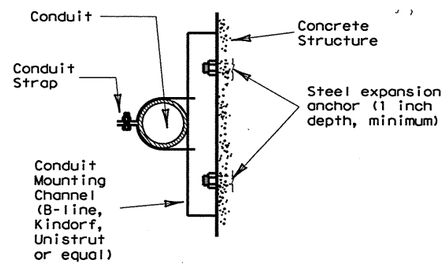
| AWG | 3 CONDUCTORS | 5 CONDUCTORS | 7 CONDUCTORS |
|---|---|---|---|
| #1 | 254 x 254 x 102 | 305 x 305 x 102 | 407 x 407 x 102 |
| #2 | 203 x 203 x 102 | 254 x 254 x 102 | 305 x 305 x 102 |
| #4 | 203 x 203 x 102 | 254 x 254 x 102 | 254 x 254 x 102 |
| #6 | 203 x 203 x 102 | 203 x 203 x 102 | 254 x 254 x 102 |
| #8 | 203 x 203 x 102 | 203 x 203 x 102 | 203 x 203 x 102 |

7. RMC system junction boxes surface mounted and containing conductors #8 or larger, shall be hot dipped galvanized cast iron, or aluminum, minimum wall thickness shall be 4.76 mm, and shall have mounting lugs, (Crouse Type WAB, OZ/Gedney Type YS, Adalet Type 3R, or approved equal).
8. Junction boxes containing only #10 and #12 AWG conductors shall be Crouse Hinds Type GRFX, Appleton Type JBOX, two-gang FD, or similar approved cast iron. Boxes shall be sized according to NEC Table 370-16(a).
9. Junction boxes in EMT conduit systems shall be made from galvanized sheeting and shall be UL Listed as approved for outdoor use, unless otherwise noted on the plans. Sheet metal junction boxes shall be sized in accordance with the NEC.
10. Junction boxes in PVC conduit systems shall be PVC, UL Listed for outdoor use, unless otherwise noted on the plans.
11. Elbows in PVC conduit systems one inch and larger shall be rigid metal. Rigid metal elbows buried less than 18 inches underground shall be grounded. Elbows installed at ground boxes and foundations shall be extended with rigid metal conduit to the inside of the ground box or the top of the foundation. At that point a grounding bushing shall be installed.

### B. CONSTRUCTION METHODS

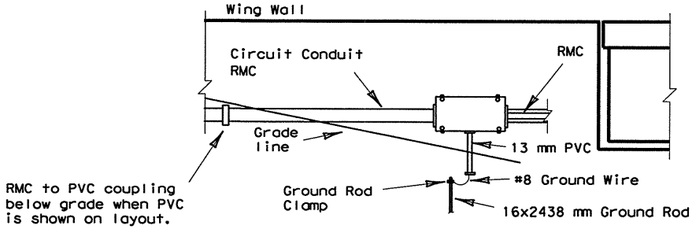
1. Conduit in structures shall have expansion fittings at structure expansion joints.
2. Conduit supports shall be spaced at maximum intervals of 1524 mm. Conduit spacers shall be used with metal conduit placed on surfaces of concrete structures (See conduit mounting options).
3. Conduit supports shall not be attached directly to prestressed concrete beams except as shown specifically in the plans and approved by the Engineer.
4. Unless otherwise shown on the plans, conduit placed beneath existing roadways, driveways, or sidewalks, or after the base or surfacing operation has begun, shall be accomplished by jacking or boring. The Contractor shall back fill and compact the bore pits to the bottom of the conduit prior to installing connecting conduit or duct cable to prevent bending of the connection.
5. Conduit trenched in the subgrade of new roadways shall be back filled with excavated material, unless otherwise noted on the plans. Conduit trenched in the sub-base of new roadways shall be back filled with cement-stabilized base.
6. Open ends of all conduit and raceways shall be fitted with temporary caps or plugs to prevent entry of dirt, debris and rodents during construction. The temporary cap may be constructed of duct tape, but in all cases shall be tightly fixed to the conduit and shall be durable. The contractor shall clean out the conduit and prove it clear in accordance with Standard Specifications Item 618.3 prior to installing any conductors.
7. Conduit entry into the top of junction boxes and enclosures shall be made weathertight using threaded hubs.
8. A bonding jumper shall be installed from each grounding bushing to the nearest grounding rod, grounding lug, and/or system grounding conductor. At electrical services, grounding electrode conductor shall be #6 AWG. All other jumpers shall be the same size as supply conductors. Conduit used as casing under roadways for duct cable need not be grounded if duct extends full length through the casing.
9. Metal junction boxes shall be bonded to the grounding conductor in accordance with the NEC.
10. Conduits entering ground boxes shall be placed so that the conduit ends shall be not less that 125 mm nor more than 225 mm from the box cover (See ground box detail on sheet ED(2)).
11. Conduit ends shall be sealed with heat shrink boots with sealant, silicone caulking, urethane foam, or by other methods approved by the Engineer. Sealing shall be done after completion of any required pull tests. Duct tape shall not be used as a permanent conduit sealant.





## CONDUIT MOUNTING OPTIONS

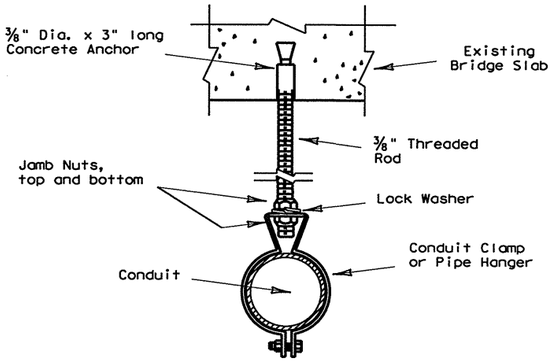
(Attachment to concrete surfaces)
(See para. II.B.2)



**NOTES**

1. Conduit shall be 50 mm RMC for duct cable entry to junction box.
2. Ground rod clamp to be Blackburn GG 5/8H, Weaver W5/8 or equal.
3. Surface mounting shown, for conduit to be placed in structure use flush-mounted box.
4. Bond junction box to grounding conductor.

## TYPICAL CONDUIT ENTRY TO BRIDGE STRUCTURE DETAIL



## CONDUIT HANGER DETAIL

(Attachment to horizontal surfaces)
(See para. II.B.2)

All dimensions are in millimeters unless otherwise noted.

DISCLAIMER
The use of this standard is governed by the "Texas Engineering Practice Act". No warranty of any kind is made by TxDOT for any purpose whatsoever. TxDOT assumes no responsibility for the conversion of this standard to other formats or for incorrect results or damages resulting from its use.

## I. ELECTRICAL CONDUCTORS

### A. MATERIALS

1. Insulated conductors shall be NEC Type XHHW. Conductors shall be color coded in accordance with the NEC, articles 200, 250, and 310; i.e. Grounded conductors (neutrals) shall be white, Grounding conductors (ground wires) shall be bare or green, Ungrounded conductors (hots) shall be any color except green, white, or grey. Identification of conductors #10 AWG and smaller shall be by continuous jacket color. Color coding of electrical conductors #8 AWG and larger shall be either by continuous color jacket or by colored tape. Colored tape marker shall consist of a half-lap of tape covering a 6 inch length of conductor.

2. Where two or more circuits are present in one conduit or enclosure, the conductors of each circuit shall be identified by a permanent non-metallic tag at each accessible location. The tag shall be fastened to the conductors by plastic straps.

3. Grounding electrode conductors #6 AWG or smaller, for bonding to ground rods at electrical services, shall be solid. Connection of conductors to ground rods shall be made using UL Listed connectors designed for such purposes.

4. Heat Shrink Tape filler shall be used to seal the ends of heat shrink tubing around two or more conductors that are insulated with heat shrink tubing. Tape material shall have a minimum dielectric strength of 225 volts per 0.0254 mm and may be either cross-linked butyl rubber or silicone gel strip. Tape shall be supplied in rolls and shall have a backing (release paper) to prevent the tape from sticking to itself.

### B. CONSTRUCTION METHODS

1. After conductors have been installed in conduit, a pull test will be made on conductors. When any length of conductor cannot be freely pulled, the Contractor shall make any needed alterations or repairs at no expense to the State.

2. Conductors in illumination poles shall be supported by a J-hook in the top of the pole.

3. A sufficient length of conductor for making up connections shall be left in ground boxes (610 mm minimum to point of splice, 914 mm minimum when conductor is pulled through with no splice), enclosures, and pole bases (305 mm minimum and typical).

4. Splices shall be made only in junction boxes, ground boxes, pole bases, or electrical enclosures and shall be made with approved compression sleeves or split bolt connectors. Splices shall be insulated with heavy wall heat shrink tubing containing factory applied sealant and shall be watertight. Heat shrink sleeve shall overlap conductor insulation a minimum of 50 mm on both sides of the splice. Heat shrink tape filler is required where two or more conductors enter one heat shrink tube to ensure watertight splice. Heat shrink tape shall be either butyl rubber or silicone gel strip.

5. Wire nuts may be used for #8 AWG and smaller conductors in above-ground junction boxes, but not in pole bases or ground boxes. Wire nuts shall be positioned upright to prevent the accumulation of water.

## II. GROUND BOX

### A. MATERIALS

1. Ground boxes shall be concrete or polymer concrete, as required by the descriptive code shown elsewhere.

2. All precast ground boxes and covers shall be permanently marked either by impress or by permanent ink, with manufacturer's model number, name or logo.

3. Covers shall be bolted down, and bolt holes in the box shall be arranged to drain dirt.

4. Ground box Types A, B, C, D & E shall be Polymer Concrete and shall meet the following requirements:

   a. Boxes shall be manufactured from Reinforced Polymer Concrete (RPM) composed of borosilicate glass fiber, a catalyzed polyester resin and an aggregate. Side walls may be fiber reinforced polymer.

   b. Minimum inside dimensions shall be as follows (width x length x depth):

      Type A shall be 292 mm x 533 mm x 254 mm, (122311)
      Type B shall be 292 mm x 533 mm x 508 mm, (122322)
      Type C shall be 387 mm x 718 mm x 254 mm, (162911)
      Type D shall be 387 mm x 718 mm x 508 mm, (162922)
      Type E shall be 292 mm x 533 mm x 406 mm, (122317)

   c. Bottom edge of box or extension shall be footed with a minimum 32 mm flange.

   d. Ground boxes shall withstand a test loading of 9072 kg over a 254 by 254 mm area centered on the lid and 0.029 MPa applied over the entire side wall. The model of ground box proposed shall have been tested by a laboratory independent of the manufacturer to meet loading requirements. Certification of such tests shall be submitted to the Engineer for approval.

   e. Covers shall be 51 mm (nominal) thick polymer concrete. Cover shall be secured with two 1/2 inch stainless steel bolts. Bolts shall be captive and shall withstand a minimum of 95 Nm torque and shall have a minimum 3.336 kN straight pull out strength. Nuts shall be floating. Covers shall be skid resistant, minimum 0.5 coefficient of friction. Covers shall be interchangeable between manufacturers and shall conform to the dimensions shown below. Cover shall be legibly imprinted with the words "Danger High Voltage" in minimum 25 mm letters. When required, other cover lettering shall be as shown elsewhere on the plans.

5. Cast in place and precast concrete boxes shall be as shown elsewhere in the plans.

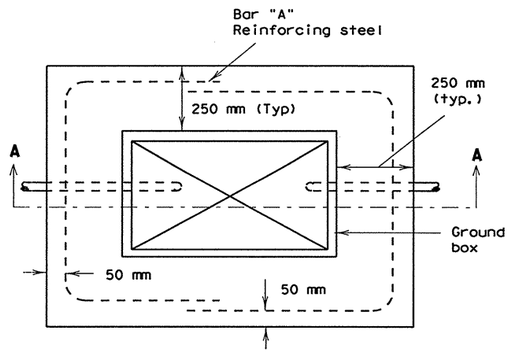
### B. CONSTRUCTION METHODS

1. Ground boxes shall be set on a 230 mm (minimum) bed of course No. 1 aggregate as defined by item 421. Gravel shall be in place prior to setting box and conduits shall be capped. Any gravel or dirt in conduit shall be removed.

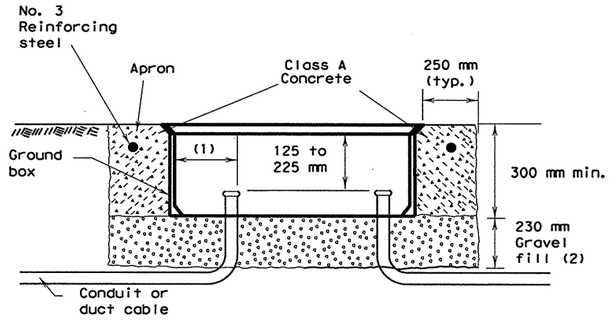
2. When required by Item descriptive code, construction of an apron encasing a ground box including concrete and reinforcing steel shall not be paid for directly but shall be subsidiary to the ground box. Reinforcing steel may be field bent. Concrete for aprons shall be considered miscellaneous concrete for testing purposes.

3. Conduit holes may be cut into the walls of deep boxes at least 450 mm beneath the cover.

4. Steel covers shall be bonded to grounding conductor with a 900 mm long flexible jumper.



PLAN VIEW



SECTION A - A

(1) Final position of end of conduit shall not exceed one-half of the distance to the side of the box opposite of the conduit entry.

(2) Place gravel "under" the box, not "in" the box. Gravel should not encroach on the interior volume of the box.

## ELECTRICAL SERVICES NOTES

All work, materials, services, and incidentals, whether or not specifically shown on the plans, which may be necessary for a complete and proper electrical service installation as specified in the plans to obtain electrical power (except extending primary lines to electrical service) shall be paid for, performed, furnished and installed by the Contractor. The Contractor shall contact the Utility for metering and shall comply with all Utility requirements.

Primary line extensions, when required, shall be paid for under Force Account work. The Contractor shall consult with the appropriate Utility to determine costs and requirements, and shall coordinate the Utility's work as approved by the Engineer. The contractor shall be reimbursed only the amount billed by the Utility. No additional amount for supervision of the Utility's work will be paid.

Materials shall be new and unused, and materials and installation shall comply with the applicable provisions of the National Electrical Code (NEC) and National Electrical Manufacturers Association (NEMA) standards and shall be Underwriters Laboratories (UL) Listed. Electrical Service conduits, conductors, disconnects, contactors, circuit breaker panel sizes, and branch circuit breakers, shall be as shown in the Electrical Service Data elsewhere in the plans. Faulty fabrication or poor workmanship in any material, equipment, or installation shall be justification for rejection.

The Contractor shall submit for approval no less than five (5) copies of catalog cut sheets on electrical service materials. Submittals shall be legible and shall be marked to incicate which product on a cut-sheet is to be supplied. Where manufacturers provide warranties and guarantees as a customary trade practice, Contractor shall furnish to the State such warranties or guarantees.

I. Safety Switch. A safety switch, placed ahead of the meter, shall only be used when specified by the Utility and is shown on the Electrical Service Data. The switch shall be UL Listed, heavy duty type, 600 volt, unfused, with a UL type 3R enclosure and equipped with a solid neutral (s/n) assembly. The switch shall be padlockable in the "on" position.

II. Service Type. Electrical service types A, C, D, and T shall be as schematically detailed on ED(4). Other service types shall be as detailed elsewhere on the plans.

III. Branch Circuit Breakers. Circuit breakers shall be thermal magnetic and have a minimum interrupting capacity of 10,000 amps and a voltage rating compatible with their use. Circuit breakers shall be sized as shown on electrical service data table. Circuit breakers in panelboards and load centers shall be full size and designed exclusively for the panelboard or load center in use. Tandem and half-width breakers shall not be used. All circuit breakers shall be permanently and clearly marked identifying the circuit or device attached. Circuit breakers shall be UL Listed to UL489. Circuit breakers shall beswitch duty.

IV. Circuit Breaker Panelboard. Panelboards shall be UL Listed and shall meet Federal Specification W-P-115b, Type 1, Class 1 requirements. Panelboards shall have copper busses, a minimum of 12 one-pole spaces, and shall be rated for service equipment. Enclosure shall meet UL type 3R classification. Panelboards shall have a threaded hub conduit entry for conduit entering the top of the enclosure. Circuit breakers shall be bolt-in type only.

V. Circuit Breaker Load Center. Load centers shall be UL Listed, and shall meet Federal Specification W-P-115c, Type 1, Class 2 requirements. Load centers shall have copper busses, a minimum of 4 one-pole spaces, and shall be rated for service equipment. Enclosure shall meet UL type 3R classification. Load centers shall have a threaded hub conduit entry for conduit entering the top of the enclosure. Circuit breakers shall be plug-in type only. Load centers for type T services shall accomodate a maximum of 6 one-pole breakers.

## EXPLANATION OF ELECTRICAL SERVICE DESCRIPTIVE CODE

**ELEC SERV TY X (XXX/XXX) XXX (XX) XX (X) XX (X)**

Schematic Type

Service Voltage (V / V )

Main Disconnect Amp Rating
(000 indicates none)

SS= Safety switch ahead of meter
NS= No switch ahead of meter and/or no meter required

Enclosure Type
GS= Galvanized steel
SS= Stainless steel
PS= Pedestal Service

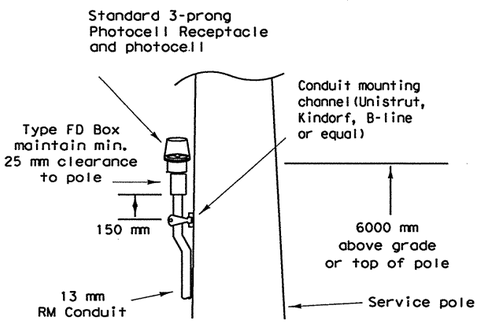
⚠1

Photocell Location
T= Top of pole
E= Enclosure mounted
L= Luminaire mounted
N= None

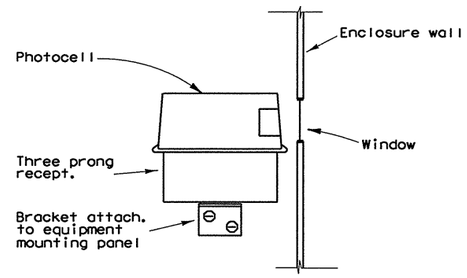
Service Support Type
GC= Granite concrete
OC= Other concrete
TP= Timber pole
SP= Steel pole
SF= Steel frame
OT= Pole by others or paid for separately
EX= Existing pole
TS= Switch gear to be placed on traffic signal pole
RT= Rectangular structural tubing
PS= Pedestal Service

O= Overhead service
U= Underground service

Example: ELEC SERV TY D(120/240)070(NS)GS(T)TP(O)

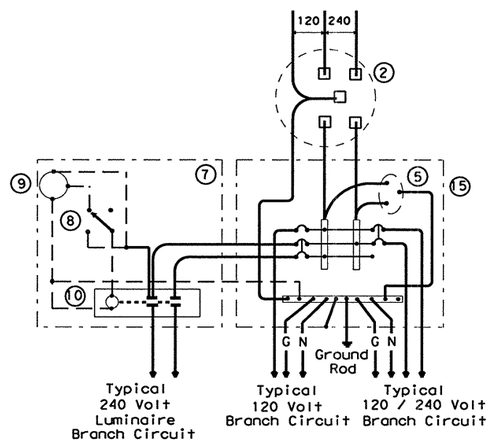


**TOP MOUNTED PHOTOCELL**



**ENCLOSURE MOUNTED PHOTOCELL**

For photocell specifications see ED(4),XII.



**SCHEMATIC TYPE T**
**120/240 VOLTS - THREE WIRE**

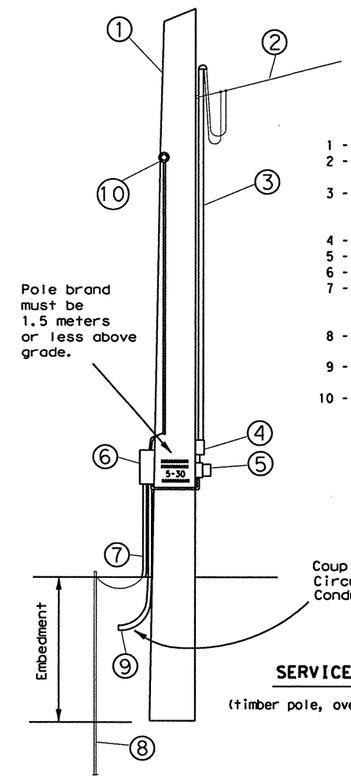
Install photocell and lighting contactor when shown on Electrical Service Data.

## SCHEMATIC LEGEND

1 - Safety Switch (when required)
2 - Meter (when required)
3 - Service Assembly Enclosure
4 - Main Disconnect (Switch or Breaker, See Electrical Service Data)
5 - Lightning Arrestor
6 - Circuit Breaker, 15A
7 - Auxiliary Enclosure
8 - Control Station ("H-O-A" Switch)
9 - Photo Electric Control (enclosure-mounted shown)
10 - Lighting Contactor
11 - Power Distribution Terminal Blocks
12 - Neutral/Ground Bus
13 - Branch Circuit Breaker (See Electrical Service Data)
14 - Circuit Breaker Panelboard (See Electrical Service Data)
15 - Load Center (See Electrical Service Data)

——— Power Wiring
- - - - - Control Wiring
—N— Neutral Conductor (when required)
—G— Grounding Conductor

⚠1 Added pedestal service



1 - Class 5 pole, height as required
2 - Service drop from utility company (attached below weatherhead)
3 - Service conduit and service entrance conductors (See Electrical Service Data)
4 - Safety switch (when required)
5 - Meter (when required)
6 - Service enclosure
7 - No. 6 bare grounding electrode conductor in 13 mm PVC to ground rod
8 - 16 x 2438 mm Copper clad ground rod
9 - RM conduit - same size as branch circuit conduit
10 - Photocell and conduit - if top mounted (See Electrical Service Data)

**SERVICE SUPPORT TYPE TP (O)**

(timber pole, overhead service, typical arrangement)

## TIMBER POLE NOTES

1. Conduit and conductors attached to service pole and underground within 305 mm of service pole shall not be paid for directly but shall be subsidiary to the service pole.
2. Install photo electric control on north side of pole or in service enclosure as required. See Electrical Service Data.
3. Attach service enclosure with galvanized channel (Unistrut, Kindorf, or equal). Gain pole two places to provide flat surfaces. Paint ends of channel with zinc rich paint.
4. Embedment depth shall be as required in Item 627 Treated Timber Poles.
5. Poles trimmed for excess length shall be trimmed from the top end only.

All dimensions are in millimeters unless otherwise noted.

## SERVICE ENCLOSURE NOTES

VI. Service Assembly Enclosures. All service assemblies and enclosures shall be UL Listed for the intended purpose.

A. Shop built or shop assembled service assemblies (all types except Type T and Type D without lighting contactor) shall be built or assembled by a UL Listed Industrial Control Panel shop and shall have a unique serial numbered UL Label with the words "LISTED ENCLOSED INDUSTRIAL CONTROL PANEL". The same or an additional label shall have the name, location, and phone number of the shop, the UL file number of the shop, the shop order or drawing number, date of manufacture or assembly, and the line voltage. The enclosure shall also be labeled "SUITABLE ONLY FOR USE AS SERVICE EQUIPMENT".

B. Conduit entries into the top of all enclosures shall have threaded hubs.

C. All enclosures shall be permanently labeled on the front door "DANGER HIGH VOLTAGE" and the equipment supplied (i.e. LIGHTING, LANDSCAPING, SIGNALS, TRAFFIC MANAGEMENT). Unless otherwise approved by the Engineer, the labeling shall be minimum 25 mm letters and shall be applied by stenciled paint or stick-on decal.

D. Type GS enclosures for service types D, T, and the circuit breaker panelboard of service type C shall be made from pre-galvanized steel sheeting, hot dipped galvanized steel, or powder coat painted steel. Painted enclosures shall be painted inside and outside; galvanized enclosures may be painted. Unless otherwise approved by the engineer, painted enclosures shall be gray, beige, or white. Panelboard/loadcenter enclosures shall be UL type 3R, shall have a dead front trim, and shall have a door with provisions for padlocking. Auxiliary enclosures, when required for illumination or other control equipment, shall be UL type 12 as described in III.E. below for service types A and C.

E. Type GS enclosures for service types A and C shall meet the requirements of type GS in III.D. above for service types D and T except that the enclosure shall be a UL type 12 enclosure conforming to UL 50 and shall meet additional requirements of this paragraph. The enclosure door shall have a rolled lip around all sides of the enclosure opening, a continuous hinge, and a padlock handle. The door shall have a mechanically attached data pocket constructed of either thermoplastic or metal and measuring at least 300 mm by 300 mm. The main disconnect operator shall be flange-mounted, shall interlock the door when in the "on" position, and shall be pad lockable in both the "on" or the "off" positions. Enclosure shall include an equipment mounting panel installed inside the enclosure on collar studs or tapped bosses, and constructed of either 2.66 mm thick steel or 2.54 mm thick aluminum. Enclosure shall be either hot dip galvanized, pre-galvanized sheeting or prime and painted. Paint shall be powder coat paint as show below. Color shall be white or gray. Condensation drainage shall be provided through 3 mm drain holes drilled in the bottom of the enclosure at two diagonal opposing corners. The contractor shall place in the service enclosure a laminated copy of the "as built" electrical plans showing the equipment supplied by that electrical service and all applicable wiring diagrams, layouts, and ED and RID standard sheets.

F. Type SS Stainless steel enclosure shall be meet all the requirements above for the respective type GS except that the enclosure shall be UL type 4X conforming to UL 50. Type GS circuit breaker panel housed in a stainless steel UL type 4X enclosure conforming to UL 50 shall be considered complying with the Type SS requirements for Service types D & T.

G. Type PS enclosure shall be as detailed and specified on ED(8).

VII. Powder Coat Paint. Powder coating shall be either a polyester thermosetting resin, a zinc rich primer with a TGIC (triglycidyl isocyanurate) powder overcoating, or a zinc-rich epoxy powder, applied by either electrostatic spray or fluidized bed immersion, high temperature oven cured, high density, low gloss, 0.1016 mm thick (minimum), coating. Adhesion shall meet the 5A or 5B classifications of ASTM D3359. Finish shall be uniform in appearance and free of scratches.

VIII. Main Disconnect. Main disconnect device shall be either a fusible switch or a circuit breaker, as specified in the Electrical Service Data, shall be two pole, and rated for the voltage and amperage specified.

A. Switch shall be UL and NEMA Type HD (heavy duty) flange-mounted in the service assembly enclosure. Switch shall have clips for Class R fuses.

B. Circuit breaker shall be a UL Listed thermal-magnetic circuit breaker flange-mounted in the service assembly enclosure. Circuit breakers shall have a minimum interrupting rating of 14,000 Amps. Contractor shall verify that the available fault current is less than the circuit breaker amps interrupting capacity (AIC) rating and shall provide documentation from the Utility to the Engineer. Documentation shall be submitted at the same time as other electrical submittals. Circuit breaker shall be UL Listed to UL489.

IX. Lightning Arrester. Arresters shall be MOV-type secondary surge arresters rated 650 volts for 240/480 volt services or 175 volts for 120/240 volt services and shall meet ANSI, IEEE, UL, and NEMA standards. Mounting brackets shall be provided for mounting the arresters inside the service assembly enclosures, unless otherwise specified by the Engineer. Lightning arrester leads shall be run as straight and short as practical.

X. Control Circuit. Control circuit protection shall be either a 10 or 15 amp circuit breaker.

XI. Control Station ("H-O-A" Switch). Control station shall be a maintained-contact, three position selector switch in a UL type enclosure. Switch shall be rated 600 volts and shall be fitted with "Hand-Off-Auto" legend.

XII. Photo Electric Control. Photo electric control shall consist of a photocell, internal lightning arrester, and relay or bimetallic switch mounted inside a weatherproof enclosure with standard 3-prong twist lock photocell plug and receptacle. The enclosure shall be made of poly-acrylic with clear acrylic window. Enclosure chassis shall be molded phenolic plastic. The photocell shall have a polyethylene gasket, and shall have a hermetically sealed cadmium sulfide cell. The arrester shall have an enclosed type expulsion arrester rated 2.0 kV sparkover with 10,000 amps follow-through. Relay or switch shall be time delay type with normally closed contacts. Photo electric control shall be rated 1800 VA, 105-285 volts.

Enclosure mounted photocells shall be the same as above except that the photocell shall be mounted inside the enclosure. The enclosure shall have two acrylic paned windows, or other material approved by the Engineer, one on each side of the enclosure. Each window shall be rectangular approximately 25 mm by 50 mm, round 50 mm diameter, or as otherwise approved by the Engineer. The photocell shall be mounted in a position to receive light from one window. Top of pole mounted photocells shall be mounted as shown on ED(4).

The Contractor shall be responsible for proper operation of the photo-electric control. The Contractor shall move and/or adjust or shield the photocell from stray or ambient nighttime light or shall make any other adjustments required for proper operation. The photocell shall face North when practicable. Unless otherwise shown on the plans, the photocell shall turn on the illumination system at 10 +(-) 5 Lux and turn off the illumination system at 20 Lux higher than turn on.

XIII. Lighting Contactor. Lighting contactor shall be a UL Listed lighting contactor, two-pole or multipole as required, electrically held type designed to control high pressure sodium lighting loads, with silver alloy double break contacts rated at 480 volts or 600 volts.

XIV. Power Distribution Terminal Blocks. Power distribution terminal blocks shall be rated for 600 volts and shall be used for line side connections to branch circuit breakers where more than one circuit breaker is required. Lugs on blocks shall be properly sized for conductors being used. Only one conductor shall be placed under each lug.

XV. Neutral/Ground Bus. Neutral/ground bus shall be a factory made bus permanently bonded to the enclosure with properly sized lugs for grounding and neutral conductors.

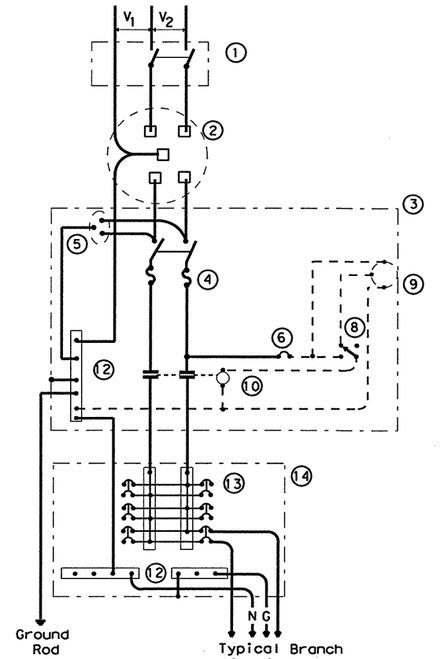
**SCHEMATIC TYPE A**

**THREE WIRE**

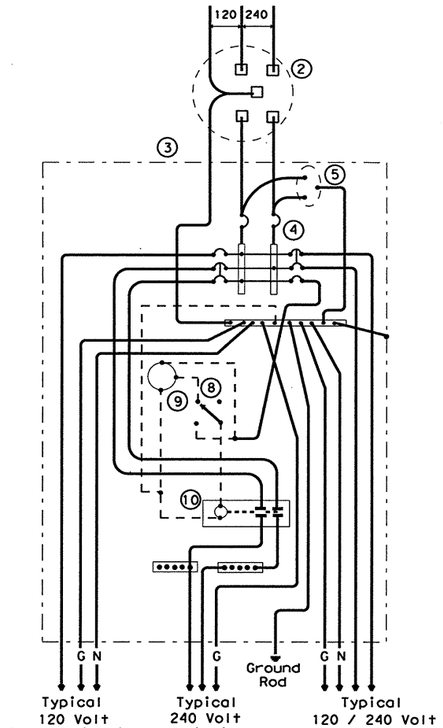
Maximum feeder circuit size (High Mast Poles): 100 amps for two pole 480V, 125 amps for one or two pole 120V or 240V. Maximum branch circuit size: 50 amps.



**SCHEMATIC TYPE C**

**THREE WIRE**

Maximum feeder circuit size (High Mast Poles): 100 amps for two pole 480V, 125 amps for one or two pole 120V or 240V. Maximum branch circuit size: 50 amps.



**SCHEMATIC TYPE D**

**120/240 VOLTS - THREE WIRE**

Install photocell and lighting contactor when shown on Electrical Service Data. See Type D service notes.

**TYPE D SERVICE NOTE**

Photocell and lighting contactor shall be located in the same UL type 3R enclosure. Photocells shall have a window on each side of enclosure to allow operation. Photocell/contactor and breaker area shall have separate dead front trim. Enclosure, except for RT and PS supports, shall not exceed 915 mm in height or 385 mm in width unless approved by the engineer.

All dimensions are in millimeters unless otherwise noted.

DISCLAIMER
The use of this standard is governed by the "Texas Engineering Practice Act". No warranty of any kind is made by TxDOT for any purpose whatsoever. TxDOT assumes no responsibility for the conversion of this standard to other formats or for incorrect results or damages resulting from its use.

## SERVICE ENCLOSURE NOTES

VI. Service Assembly Enclosures. All service assemblies and enclosures shall be UL Listed for the intended purpose.

A. Shop built or shop assembled service assemblies (all types except Type T and Type D without lighting contactor) shall be built or assembled by a UL Listed Industrial Control Panel shop and shall have a unique serial numbered UL Label with the words "LISTED ENCLOSED INDUSTRIAL CONTROL PANEL". The same or an additional label shall have the name, location, and phone number of the shop, the UL file number of the shop, the shop order or drawing number, date of manufacture or assembly, and the line voltage. The enclosure shall also be labeled "SUITABLE ONLY FOR USE AS SERVICE EQUIPMENT".

B. Conduit entries into the top of all enclosures shall have threaded hubs.

C. All enclosures shall be permanently labeled on the front door "DANGER HIGH VOLTAGE" and the equipment supplied (i.e. LIGHTING, LANDSCAPING, SIGNALS, TRAFFIC MANAGEMENT). Unless otherwise approved by the Engineer, the labeling shall be minimum 25 mm letters and shall be applied by stenciled paint or stick-on decal.

D. Type GS enclosures for service types D, T, and the circuit breaker panelboard of service type C shall be made from pre-galvanized steel sheeting, hot dipped galvanized steel, or powder coat painted steel. Painted enclosures shall be painted inside and outside; galvanized enclosures may be painted. Unless otherwise approved by the engineer, painted enclosures shall be gray, beige, or white. Panelboard/loadcenter enclosures shall be UL type 3R, shall have a dead front trim, and shall have a door with provisions for padlocking. Auxiliary enclosures, when required for illumination or other control equipment, shall be UL type 12 as described in III.E. below for service types A and C.

E. Type GS enclosures for service types A and C shall meet the requirements of type GS in III.D. above for service types D and T except that the enclosure shall be a UL type 12 enclosure conforming to UL 50 and shall meet additional requirements of this paragraph. The enclosure door shall have a rolled lip around all sides of the enclosure opening, a continuous hinge, and a padlock handle. The door shall have a mechanically attached data pocket constructed of either thermoplastic or metal and measuring at least 300 mm by 300 mm. The main disconnect operator shall be flange-mounted, shall interlock the door when in the "on" position, and shall be pad lockable in both the "on" or the "off" positions. Enclosure shall include an equipment mounting panel installed inside the enclosure on collar studs or tapped bosses, and constructed of either 2.66 mm thick steel or 2.54 mm thick aluminum. Enclosure shall be either hot dip galvanized, pre-galvanized sheeting or prime and painted. Paint shall be powder coat paint as show below. Color shall be white or gray. Condensation drainage shall be provided through 3 mm drain holes drilled in the bottom of the enclosure at two diagonal opposing corners. The contractor shall place in the service enclosure a laminated copy of the "as built" electrical plans showing the equipment supplied by that electrical service and all applicable wiring diagrams, layouts, and ED and RID standard sheets.

F. Type SS Stainless steel enclosure shall be meet all the requirements above for the respective type GS except that the enclosure shall be UL type 4X conforming to UL 50. Type GS circuit breaker panel housed in a stainless steel UL type 4X enclosure conforming to UL 50 shall be considered complying with the Type SS requirements for Service types D & T.

G. Type PS enclosure shall be as detailed and specified on ED(8).

VII. Powder Coat Paint. Powder coating shall be either a polyester thermosetting resin, a zinc rich primer with a TGIC (triglycidyl isocyanurate) powder overcoating, or a zinc-rich epoxy powder, applied by either electrostatic spray or fluidized bed immersion, high temperature oven cured, high density, low gloss, 0.1016 mm thick (minimum), coating. Adhesion shall meet the 5A or 5B classifications of ASTM D3359. Finish shall be uniform in appearance and free of scratches.

VIII. Main Disconnect. Main disconnect device shall be either a fusible switch or a circuit breaker, as specified in the Electrical Service Data, shall be two pole, and rated for the voltage and amperage specified.

A. Switch shall be UL and NEMA Type HD (heavy duty) flange-mounted in the service assembly enclosure. Switch shall have clips for Class R fuses.

B. Circuit breaker shall be a UL Listed thermal-magnetic circuit breaker flange-mounted in the service assembly enclosure. Circuit breakers shall have a minimum interrupting rating of 14,000 Amps. Contractor shall verify that the available fault current is less than the circuit breaker amps interrupting capacity (AIC) rating and shall provide documentation from the Utility to the Engineer. Documentation shall be submitted at the same time as other electrical submittals. Circuit breaker shall be UL Listed to UL489.

IX. Lightning Arrester. Arresters shall be MOV-type secondary surge arresters rated 650 volts for 240/480 volt services or 175 volts for 120/240 volt services and shall meet ANSI, IEEE, UL, and NEMA standards. Mounting brackets shall be provided for mounting the arresters inside the service assembly enclosures, unless otherwise specified by the Engineer. Lightning arrester leads shall be run as straight and short as practical.

X. Control Circuit. Control circuit protection shall be either a 10 or 15 amp circuit breaker.

XI. Control Station ("H-O-A" Switch). Control station shall be a maintained-contact, three position selector switch in a UL type enclosure. Switch shall be rated 600 volts and shall be fitted with "Hand-Off-Auto" legend.

XII. Photo Electric Control. Photo electric control shall consist of a photocell, internal lightning arrester, and relay or bimetallic switch mounted inside a weatherproof enclosure with standard 3-prong twist lock photocell plug and receptacle. The enclosure shall be made of poly-acrylic with clear acrylic window. Enclosure chassis shall be molded phenolic plastic. The photocell shall have a polyethylene gasket, and shall have a hermetically sealed cadmium sulfide cell. The arrester shall have an enclosed type expulsion arrester rated 2.0 kV sparkover with 10,000 amps follow-through. Relay or switch shall be time delay type with normally closed contacts. Photo electric control shall be rated 1800 VA, 105-285 volts.

Enclosure mounted photocells shall be the same as above except that the photocell shall be mounted inside the enclosure. The enclosure shall have two acrylic paned windows, or other material approved by the Engineer, one on each side of the enclosure. Each window shall be rectangular approximately 25 mm by 50 mm, round 50 mm diameter, or as otherwise approved by the Engineer. The photocell shall be mounted in a position to receive light from one window. Top of pole mounted photocells shall be mounted as shown on ED(4).

The Contractor shall be responsible for proper operation of the photo-electric control. The Contractor shall move and/or adjust or shield the photocell from stray or ambient nighttime light or shall make any other adjustments required for proper operation. The photocell shall face North when practicable. Unless otherwise shown on the plans, the photocell shall turn on the illumination system at 10 +(-) 5 Lux and turn off the illumination system at 20 Lux higher than turn on.

XIII. Lighting Contactor. Lighting contactor shall be a UL Listed lighting contactor, two-pole or multipole as required, electrically held type designed to control high pressure sodium lighting loads, with silver alloy double break contacts rated at 480 volts or 600 volts.

XIV. Power Distribution Terminal Blocks. Power distribution terminal blocks shall be rated for 600 volts and shall be used for line side connections to branch circuit breakers where more than one circuit breaker is required. Lugs on blocks shall be properly sized for conductors being used. Only one conductor shall be placed under each lug.

XV. Neutral/Ground Bus. Neutral/ground bus shall be a factory made bus permanently bonded to the enclosure with properly sized lugs for grounding and neutral conductors.

**SPECIAL ANCHOR NOTE:**

1. Anchor rods, bolts, and nuts shall have Class 2A and 2B fit tolerances. The nuts shall be tapped after galvanizing. Slab nuts shall be installed to snug tight plus ½ turn. Burr exposed threads, on underside of existing slab, to prevent back turn of the nut.
2. Anchoring adhesive shall be a two-component solid epoxy based system supplied in manufacturer's standard side-by-side cartridge and dispensed through a static-mixing nozzle supplied by the manufacturer. Epoxy shall develop a minimum 10,400psi compressive yield strength. Adhesive shall be Epoxy-Tie ET from Simpson Strong-Tie, Pleasanton, CA. or other epoxy vendor as approved by the engineer. Anchors shall be installed per manufacture's instructions. Simpson Strong-Tie company may be reached through www.simpsonanchors.com or at 1-800-999-5099)
3. 16mm Dia A36 Hex Rod each with 3 washers. Place washer under each nut. Rods shall be sufficient length to extend 13mm to 19mm beyond nut.
4. The anchor holes shall be drilled with rotary (coring or masonry drill) type drilling equipment. Percussion (star drill) type drilling equipment shall not be used. The holes shall be clean and dry. Compressed air, if used to clean the holes, shall have no oil in suspension.
5. Actual sign hole locations may vary, see Sign Details for hole location. Contractor is responsible for verifing hole locations prior to drilling holes.

GENERAL NOTES:

The alphabets and lateral spacing between letters and numerals shall conform with the Texas "Manual on Uniform Traffic Control Devices for Streets and Highways", latest edition, and any approved changes thereto. Lateral spacing of text shall provide a balanced appearance. All materials shall conform to Department Specifications.

Legend (except for sign R14-6), shall be applied by reverse screening process with transparent colored ink, cut-out white reflective sheeting applied to colored background or combination thereof. Background shall be reflective sheeting (Type C).

Sign blanks for roadside mounted guide signs shall be 16 mm thick plywood (Type A), unless otherwise noted elsewhere in the plans. Dimensions shown for borders and corner radii are nominal. Borders may vary in width as much as 10 mm. Corner radii above 75 mm may vary in radius plus or minus 25 mm. Borders and corner radii must be of matching widths. The sign area outside the corner radius need not be trimmed or rounded. Panels attached above or below a parent sign shall be made of the same material as the parent sign. D10 Milepost Markers shall be one piece 2.0 mm thick sheet aluminum alloy (Type A).

Mounting details for roadside mounted guide signs are shown on Standard Plan Sheets SMD series, mounting details for over head signs shall be as detailed elsewhere in the plans or the supplier's choice subject to approval by the Engineer.

Individual panel sizes may be adjusted during plan preparation to fit actual parnet sign sizes where necessary. Panel sizes to be furnished should be as detailed elsewhere in the plans and/or as shown on sign tabulation sheet. See Standard Plan Sheet IM series for arrow details.

R14-6 HAZARDOUS CARGO ROUTING SIGN

Legend of parent sign shall be black cut-out vinyl non-reflective decal sheeting. Background shall be white reflective sheeting (Type A). Shield details are shown on Standard Plan Sheets R and IM series.

Parent sign blank shall be 16 mm thick plywood (Type A). Shields shall be one piece 1.6 mm thick sheet aluminum alloy (Type A).

Attachment of shields to parent sign is as detailed on Standard Plan Sheet IM(2).

All dimensions are in millimeters unless otherwise noted.

The metric dimensions shown on this sheet have been rounded, and should be considered equivalent to the English dimensions in the "1980 Standard Highway Sign Designs for Texas" manual.

# INTERSTATE ROUTE MARKERS FOR GUIDE SIGN USE

| SPECIFICATION REFERENCE TABLE | |
|---|---|
| MATERIALS AND TESTS DIVISION SPECIFICATIONS | |
| ALUMINUM SIGN BLANKS | D-9-7110 |
| REFLECTIVE SHEETING, TYPE C | |
| (HIGH SPECIFIC INTENSITY) | D-9-8300 |
| VINYL NON-REFLECTIVE DECAL SHEETING | D-9-8320 |

GENERAL NOTES:

The Alphabets and lateral spacing between letters and numerals shall conform with the Texas "Manual on Uniform Traffic Control Devices for Streets and Highways", latest edition, and any approved changes thereto. Lateral spacing of text shall provide a balanced appearance. All materials shall conform to Department Specifications.

Legend for State route markers shall be black and applied by screening process, cut-out vinyl non-reflective decal sheeting or combination thereof. Legend for U.S. route markers shall be applied by reverse screening process, cut-out black vinyl non-reflective decal sheeting or combination thereof. Legend for Interstate route markers shall be applied by reverse screening process with transparent colored ink, cut-out white reflective sheeting applied to colored background or combination thereof. Background shall be reflective sheeting (Type C).

Sign blanks shall be one piece 1.6 mm thick sheet aluminum alloy (Type A), unless otherwise noted elsewhere in the plans.

Route Markers shall be attached to guide signs as detailed on Standard Plan Sheet 1M(2)(M).

All dimensions are in millimeters unless otherwise noted.

The metric dimensions shown on this sheet have been rounded, and should be considered equivalent to the English dimensions in the "1980 Standard Highway Sign Designs for Texas" manual.

| R | S | T | AREA |
|---|---|---|---|
| 35 | 75 | ⅜ | 0.3 |
| 35 | 75 | ⅜ | 0.38 |
| 55 | 75 | ⅜ | 0.66 |
| 55 | 75 | ⅜ | 0.85 |

All dimensions are in millimeters unless otherwise noted.

The metric dimensions shown on this sheet have been rounded, and should be considered equivalent to the English dimensions in the "1980 Standard Highway Sign Designs for Texas" manual.

SPECIFICATION REFERENCE TABLE

| MATERIALS AND TESTS DIVISION SPECIFICATION | |
|---|---|
| ALUMINUM SIGN BLANKS | D-9-7110 |
| FLAT SURFACE REFLECTIVE SHEETING, TYPE A (ENGINEER GRADE) | D-9-8300 |
| VINYL NON-REFLECTIVE DECAL SHEETING | D-9-8320 |

GENERAL NOTES:

Route Markers are to be used as confirming and reassurance route markers and as component parts of a Junction, Route Turn, Directional, or Trailblazer assembly.

The alphabets and lateral spacing between letters and numerals shall conform with the Texas "Manual on Uniform Traffic Control Devices for Streets and Highways", latest edition, and any approved changes thereto. Lateral spacing of text shall provide a balanced appearance. All materials shall conform to Department Specifications.

Legend (except where noted), shall be black and applied by screening process, cut-out vinyl non-reflective decal sheeting or combination thereof. Legend on M1-6F, M1-6FX, M1-6R, M1-6RX and U.S. route markers shall be applied by reverse screening process, cut-out black vinyl non-reflective decal sheeting or combination thereof. Background shall be white reflective sheeting (Type A).

A print of the Texas state outline may be obtained from the Department to be used in making a stencil.

Sign blanks shall be one piece sheet aluminum alloy (Type A). 610x610 mm blanks shall be 2.0 mm thick, 914x914 mm and larger blanks shall be 2.5 mm thick, unless otherwise noted elsewhere in the plans.

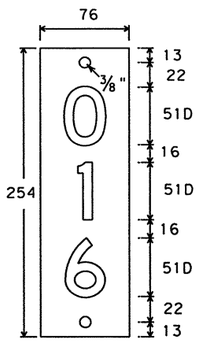
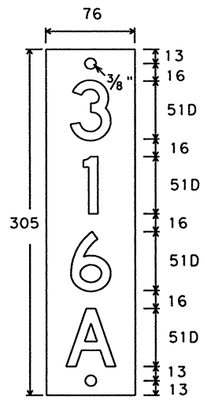
## REFERENCE MARKER PLAQUE



D10-7a
76x254

Letters - White Reflective
Numerals - White Reflective
Background - Green Reflective

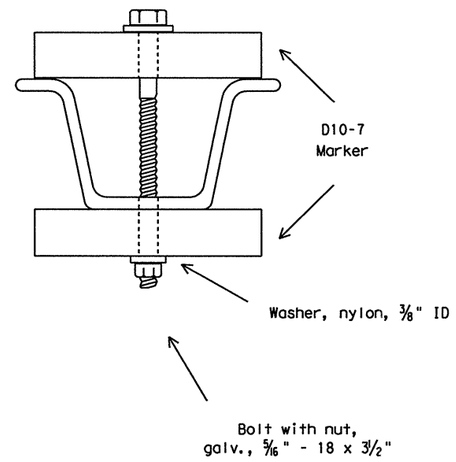
Use preceding zero for total of three digits



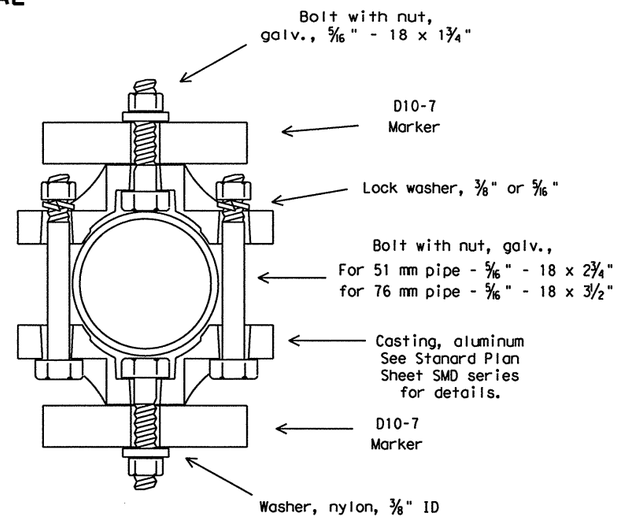
D10-7b
76x305

Letters - White Reflective
Numerals - White Reflective
Background - Green Reflective

## TYPICAL ATTACHMENT MATERIAL

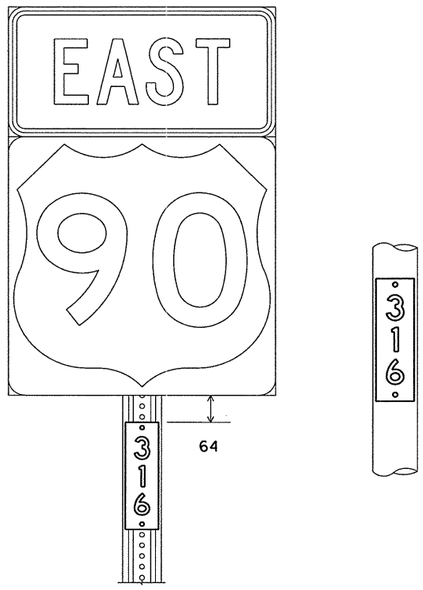


WINGED CHANNEL SUPPORT

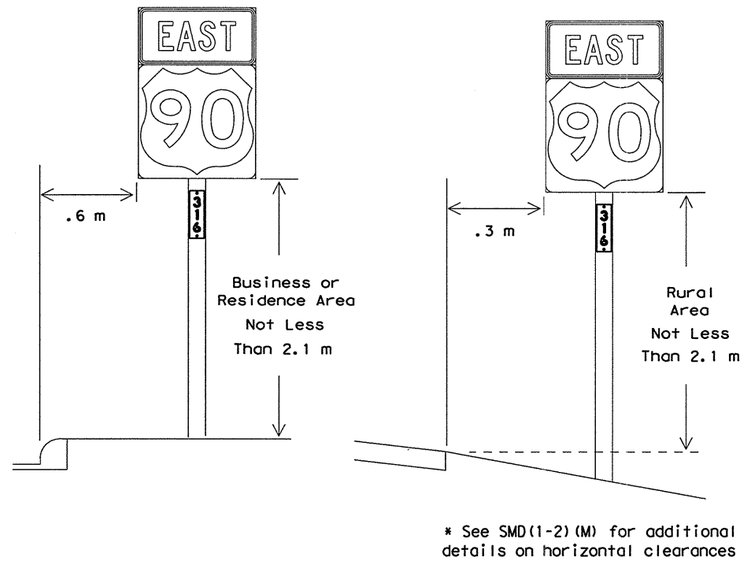


51 mm OR 76 mm ROUND PIPE SUPPORT

## TYPICAL MOUNTING



Reference Marker Plaque should cover existing milepost number, or old number should be removed. Plaques to be mounted back to back.



* See SMD(1-2)(M) for additional details on horizontal clearances

TYPE MOUNT
Use breakaway design that will leave a stub in ground, so mount can be accurately reinstalled.

| SPECIFICATION REFERENCE TABLE | |
|---|---|
| MATERIALS AND TESTS DIVISION SPECIFICATIONS | |
| PLYWOOD SIGN BLANKS | D-9-7100 |
| ALUMINUM SIGN BLANKS | D-9-7110 |
| REFLECTIVE SHEETING, TYPE C (HIGH SPECIFIC INTENSITY) | D-9-8300 |

GENERAL NOTES:

The alphabets and lateral spacing between letters and numerals shall conform with the Texas "Manual on Uniform Traffic Control Devices for Streets and Highways", latest edition, and any approved changes thereto. Lateral spacing of text shall provide a balanced appearance. All materials shall conform to Department Specifications.

Legend shall be white cut-out reflective sheeting applied to colored background, or by reverse screening process with transparent colored ink. Background shall be reflective sheeting (Type C).

Reference Marker plaques shall be one piece 2.0 mm thick sheet aluminum alloy (Type A), or 16 mm thick plywood (Type A).

All dimensions are in millimeters unless otherwise noted.

The metric dimensions shown on this sheet have been rounded, and should be considered equivalent to the English dimensions in the "1980 Standard Highway Sign Designs for Texas" manual.

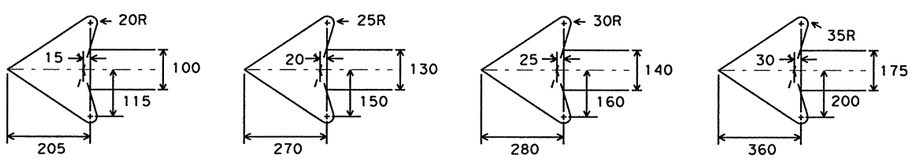
ARROWHEAD DETAILS



All dimensions are in millimeters unless otherwise noted.

The metric dimensions shown on this sheet have been rounded, and should be considered equivalent to the English dimensions in the "1980 Standard Highway Sign Designs for Texas" manual.

| SPECIFICATION REFERENCE TABLE | |
|---|---|
| MATERIALS AND TESTS DIVISION SPECIFICATIONS | |
| PLYWOOD SIGN BLANKS | D-9-7100 |
| REFLECTIVE SHEETING, TYPE C (HIGH SPECIFIC INTENSITY) | D-9-8300 |
| VINYL NON-REFLECTIVE DECAL SHEETING | D-9-8320 |

GENERAL NOTES:

The alphabets and lateral spacing between letters and numerals shall conform with the Texas "Manual on Uniform Traffic Control Devices for Streets and Highways", latest edition, and any approved changes thereto. Lateral spacing of text shall provide a balanced appearance. All materials shall conform to Department Specifications.

Legend (except where noted), shall be applied by screening process of black and/or transparent colored ink, cut-out black vinyl non-reflective decal sheeting and/or reflective sheeting or combination thereof. Background shall be yellow reflective sheeting (Type C).

Sign blanks shall be one piece 16 mm thick plywood (Type A), unless otherwise noted elsewhere in the plans.

## Folding Sign Hinge Details

Aluminum folding signs shall use 3" flat hinges, three per sign. The hinge slot on each half of sign is 16 mm deep by 85 mm wide. The sign halves are seperated by 3 mm when hinges are installed to the back of the sign with four 3/16" pop rivets. Location of hinges on the sign are as shown on above detail.

Plywood folding signs shall use 6" strap hinges, three per sign. The hinge slot on each half of sign is 16 mm deep by 85 mm wide. The hinges are bent with tapered side of holes on the external side, and attached to the back of sign with pivot extending through to front of sign. Attachment of each hinge will be with four each of 10x24x1" flat head screws with a tapered head shank, 5/16"x 3/16" flat washers and 3/16" bolt x 7/16" wrench hex nuts. Hinge bending and location on sign are as shown on above details.

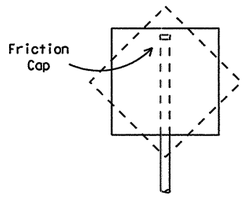
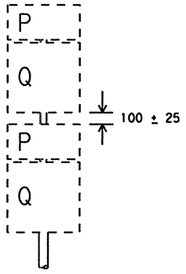
DISCLAIMER
The use of this standard is governed by the "Texas Engineering Practice Act". No warranty of any kind is made by TxDOT for any purpose whatsoever. TxDOT assumes no responsibility for the conversion of this standard to other formats or for incorrect results or damages resulting from its use.



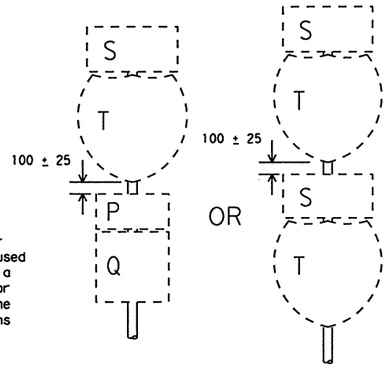
## Type A

This type of mount which uses thin wall tubing or fiberglass reinforced plastic (FRP) pipe may be used to support any sign or combination of signs with a a total area less than the maximum areas given for that support on SMD(1-4) with the exception of the following signs: FR6-1, W1-6 and W1-7. These signs should be mounted on a Type D-1 support.



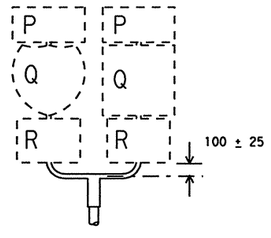
## Type A-1

This type of mount may be used for up to two route markers (along with the appropriate cardinal direction markers). A 900 or 1125mm Interstate route marker may not be used on this support. May be used as a specified optional substriture for Type B. Post shall be DN65 Sch. 10.



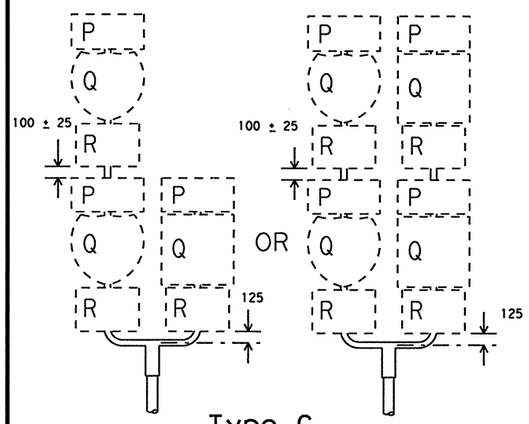
## Type A-2

This type of mount may be used for up to two route markers (along with the appropriate cardinal direction markers). 900 or 1125mm Interstate route markers are allowable on this support. May be used as a specified optional substriture for Type B. Post shall be DN65 Sch. 80.



## Type B

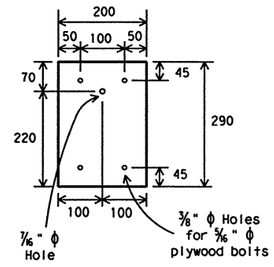
This type of mount may be used with two route markers (along with the appropriate cardinal direction markers). A 900 or 1125mm Interstate route marker may not be used on this support. Post shall be DN65 Sch. 10.



## Type C

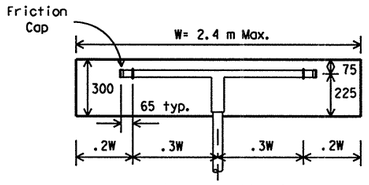
This type of mount is to be used when 3 or 4 route markers are required. If a 900 or 1125mm Interstate route marker is required, it shoud be mounted independently using a Type A mount or in conjunction with another 900 or 1125mm Interstate route marker using a Type A-2 mount. Post shall be DN65 Sch. 80.

P = 600x300 Cardinal Direction Marker
$Q_1$ = 600x600 Interstate, US or State Route Marker
$Q_2$ = 750x600 Interstate or US Route Marker
R = 525x375 Direction Arrow
S = 750x375 Cardinal Direction Marker
$T_1$ = 900x900 (2) digit Interstate Route Marker
$T_2$ = 1125x900 (3) digit Interstate Route Marker



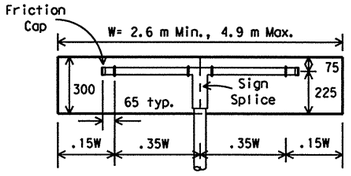
## Splice Plate

Splice plates shall be 3mm steel plate (ASTM A36) or 3mm aluminum plate (ASTM B209 ALLOY 6061-T6 or 5052-H38). Steel shall be galvanized in accordance with ASTM A123.



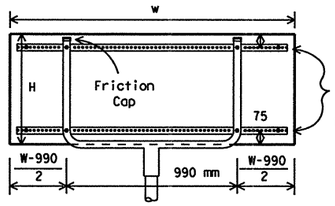
## Type D-1

1. Mounting clamps are spaced 700 mm apart for "ONE WAY" signs (FR6-1, 1200x400). Top of sign is 200mm above centerline of "T" bar.
2. For "LARGE ARROW" signs (W1-6, 1200x600), mounting clamps are spaced 750mm apart.
3. Prefabricated DN50 thin wall "T" mounted on a DN65 Sch. 10 post.



## Type D-3

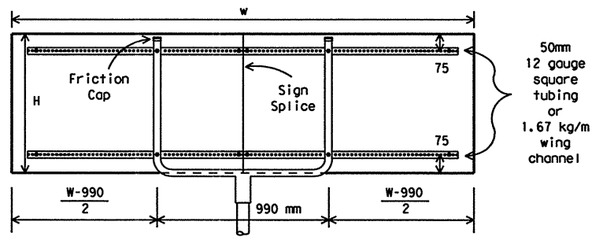
Prefabricated DN50 thin wall "T" mounted on a DN65 Sch. 10 post.



## Type D-2

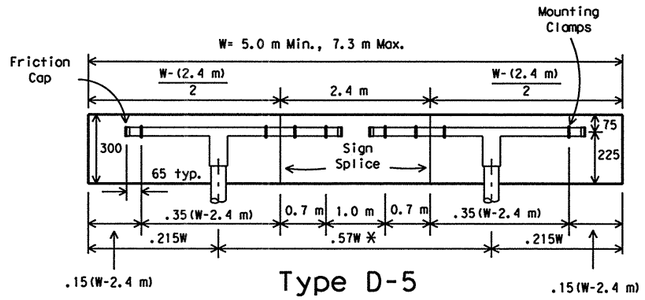
Prefabricated DN50 thin wall "U" mounted on a DN65 Sch. 10 post.

| MOUNT TYPE | H | W Min | W Max |
|---|---|---|---|
| D-2 | 600 mm | n/a | 2.4 m |
| | 750 mm | n/a | 2.0 m |
| | 900 mm | n/a | 1.7 m |
| D-4 | 600 mm | 2.6 m | 4.1 m |
| | 750 mm | 2.4 m | 3.4 m |
| | 900 mm | 1.8 m | 2.7 m |



## Type D-4

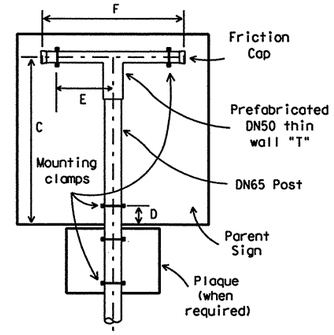
Prefabricated DN50 thin wall "U" mounted on a DN65 Sch. 80 post.



## Type D-5

1. Post spacing may vary ± 5% of total sign width to fit field conditions.
2. Prefabricated DN50 thin wall "T" mounted on a DN65 Sch 10 post.

NOTES: (FOR TYPES D-1 THROUGH D-5)
1. Splice plate required on D-3 and D-5 mounts.
2. Sign blanks shall be 16mm thick plywood conforming with Departmental Material Specification D-9-7100, unless otherwise noted elsewhere in the plans.



## Type F

| Type of Sign | | DN65 Post | C | D | E | F | |
|---|---|---|---|---|---|---|---|
| Regulatory Signs | SR1-1 | SCH 10 | 975 | 225 | 375 | 875 | |
| | FR1-2 | SCH 10 | 1075 | 525 | 275 | 675 | |
| | 900x1200 | SCH 10 | 1050 | 150 | 225 | 575 | |
| | 1200x900 | SCH 10 | 750 | 150 | 375 | 875 | |
| | 1200x1200 | SCH 10 | 1050 | 150 | 375 | 875 | 1 2 |
| | 1200x1500 | SCH 80 | 1350 | 150 | 300 | 725 | 2 |
| Warning Signs | 1200x1200 | SCH 10 | 1225 | 475 | 375 | 875 | 1 |
| | 1200x1500 | SCH 80 | 1350 | 150 | 300 | 725 | |
| School Signs | SS1-1 | SCH 10 | 750 | 150 | 300 | 725 | 3 |
| | SS2-1 | SCH 10 | 750 | 150 | 300 | 725 | 3 |

1. Includes parent signs of this size which have supplementary plaque. Example: when "DO NOT ENTER" sign (SR5-1, 1200x1200) is mounted in combination with the "RAMP" plaque (R5-1T, 1200x450), the "DO NOT ENTER" sign is mounted as a 1200x1200 regulatory sign and the "RAMP" sign is mounted as a plaque.
2. "SPEED LIMIT" signs FR2-2, FR2-3 AND FR2-4 are mounted only in combination with "SPEED LIMIT" sign FR2-1 on Type G mount. "TRUCK SPEED LIMIT" sign (FR2-2A, 1200x1800) is to be mounted independently on Type G mount, see standard SMD (TY G) for details. When "WRONG WAY" sign (SR5-1A, 1200x900) is mounted in combination with "DO NOT ENTER" sign (SR5-1, 1200x1200), Type G mount is used.
3. "SCHOOL ADVANCE" (SS1-1, 1200x1200) and "SCHOOL CROSSING" (SS2-1, 1200x1200) symbol signs shall be mounted on a Type F mount.

SIGN SUPPORTS SHALL NOT BE SPLICED EXCEPT AS SHOWN ELSEWHERE ON SMD STANDARDS

All dimensions are in millimeters unless otherwise noted.

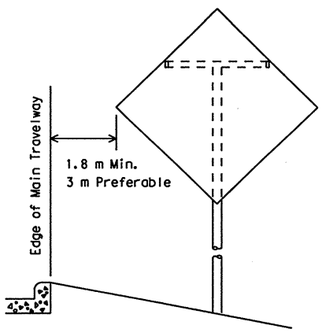
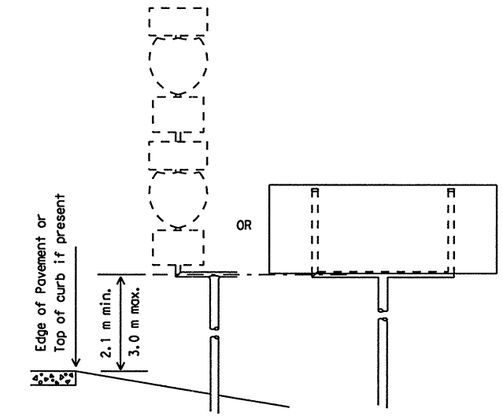
Expressways or Freeways
without curb or with mountable curb.

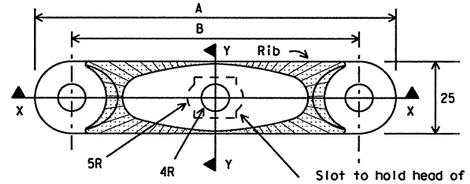


Expressways or Freeways
with unmountable curb.

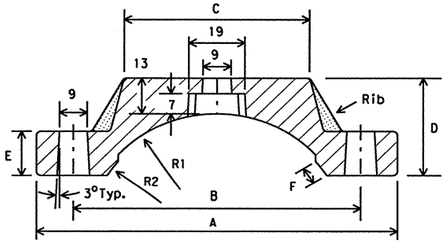
## LATERAL CLEARANCE OF SMALL SIGNS TO THE RIGHT OR LEFT SIDE OF ROADWAY



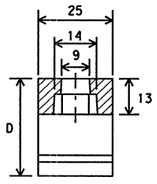
## VERTICAL CLEARANCE OF SMALL SIGNS ALL TYPES OF ROADWAYS



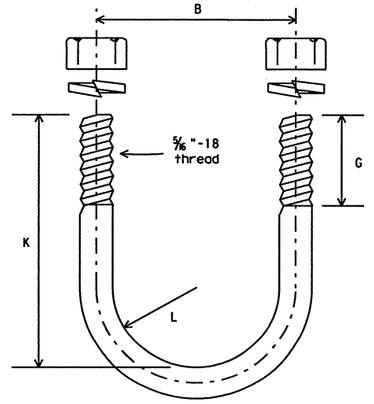
Slot to hold head of 5/16" sq. head bolt. The bolt shall be 1" long for metal signs and 1 3/4" long for plywood signs, with full threads, a medium washer, and galv. steel or aluminum self-locking hex head nut. The bolt head must not turn in slot.



Section X-X

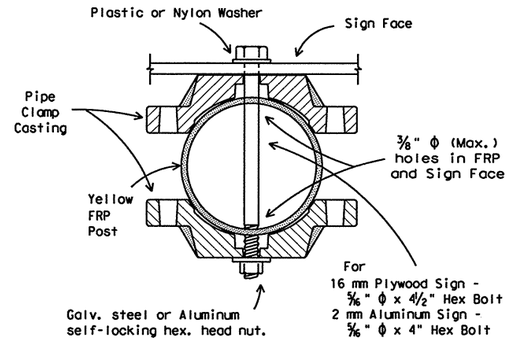


Section Y-Y



### U-Bolt

U-Bolt to be made in accordance with standard manufacturing procedure. 9/32" dia. stock is permissible. American standard regular semi-finished hex. nuts and spring lockwashers.



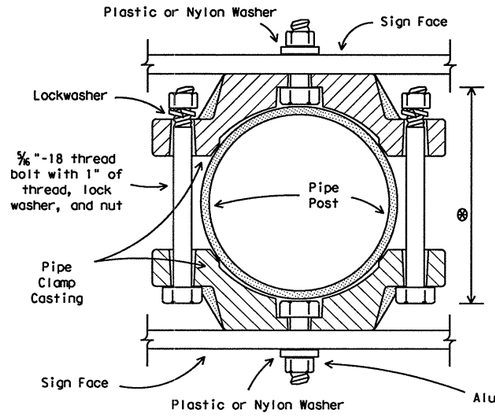
NOTE: Type A support shall be pipe or Yellow FRP. FRP mounts shall meet Departmental Material Specification D-9-4410.

### Typical Detail
### Yellow Fiberglass Reinforced Plastic (FRP) Mounting

GENERAL NOTES:

1. All clearances apply to both rural and urban locations, except as noted.
2. Where physical features of the roadway will permit, maximum lateral clearances are desirable. For frontage roads, ramps and other connecting roadways, lesser clearances may be used, but generally no less than 1.8 meters is recommended between the edge of the traveiway and the edge of the sign. At intersections, signs should be positioned in the optimum location for viewing by traffic.
3. Where necessary, the minimum allowable clearance of .6 meter may be used in urban locations on conventional highways.
4. Where a sign is to be located behind guardrail, the allowable minimum clearance may be used, measured from the face of the guardrail to the near edge of the sign.
5. Lateral clearances of signs mounted on left side of roadway are the same as shown above where space will permit.

All dimensions are in millimeters unless otherwise noted.



⊗ Approx. Bolt Length ~ Pipe Size

| | |
|---|---|
| 2⅛" | DN32 |
| 2⅝" | DN40 |
| 2⅝" | DN50 |
| 2½" | DN65 |
| 3⅛" | DN80 |

Bolt Length to be adjusted to fit field conditions.

### Typical Detail
### Back to Back Mounting of Signs

### Pipe Clamp Casting

Pipe clamp casting shall be ASTM B26 or B108 aluminum alloy A444.0-T4 or 356.0-F.

All sign mounting clamp parts not made from aluminum shall be galvanized steel in conformance with ASTM A153 Class A or stainless steel.

All dimensions have been rounded. The metric dimensions indicated should be considered equivalent to the English dimensioned clamp.

Dimensions for Mounting Clamp

| Standard Pipe Size | A | B | C | D | E | F | G | K | L | R1 | R2 |

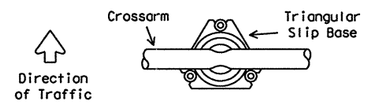
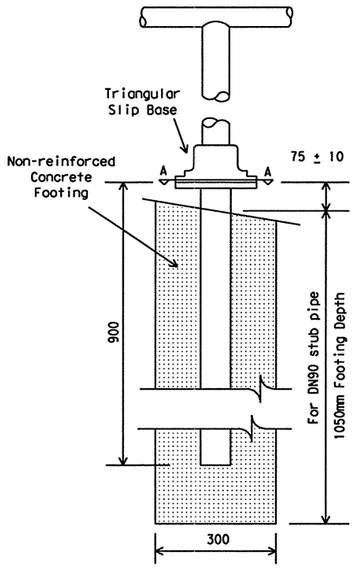
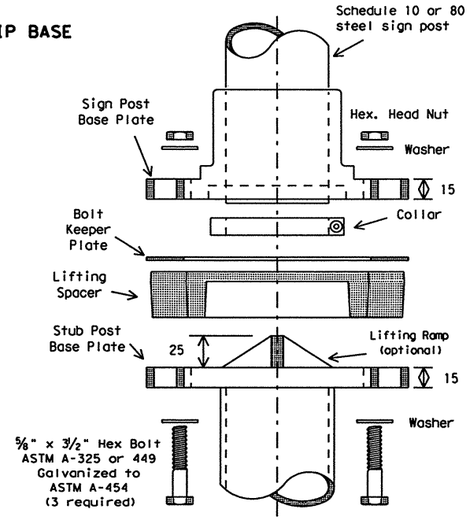
## TEXAS UNIVERSAL TRIANGULAR SLIP BASE



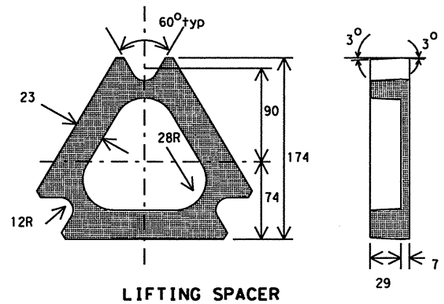
The crossarm should be parallel to one side of the triangular slip base.



Texas Universal Triangular Slip Base shall be used for signs supported on DN65 pipe posts.

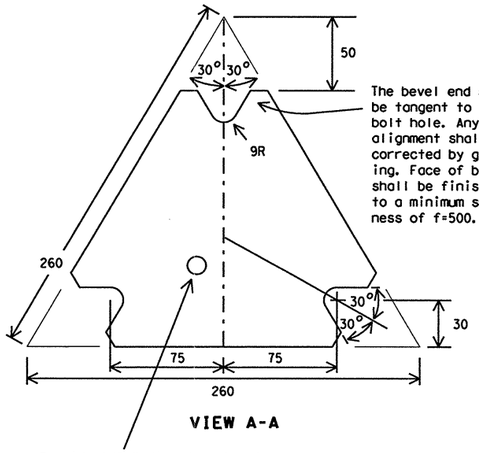


**NOTE: If stub post base plate does not have lifting ramp, lifting spacer should be deleted from assembly, unless plumbing shims are required.**



**LIFTING SPACER**

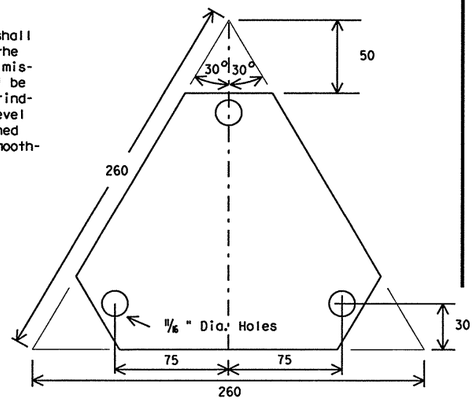
100% Recycled ABS or Polycarbonate



**VIEW A-A**

The bevel end shall be tangent to the bolt hole. Any misalignment shall be corrected by grinding. Face of bevel shall be finished to a minimum smoothness of f=500.

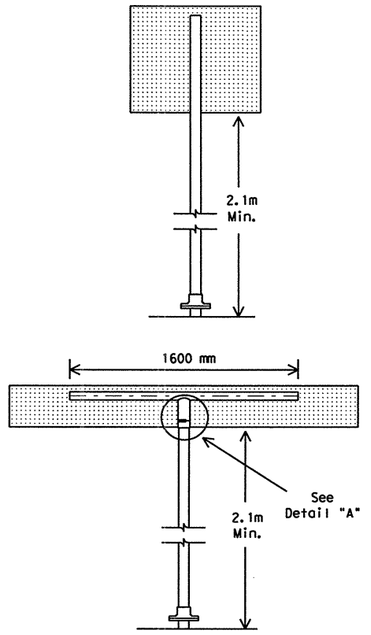
Provide 1/2 " dia. (max.) hole in the Stub Post Base Plate within the inside radius of the stub post for galvanized drainage.

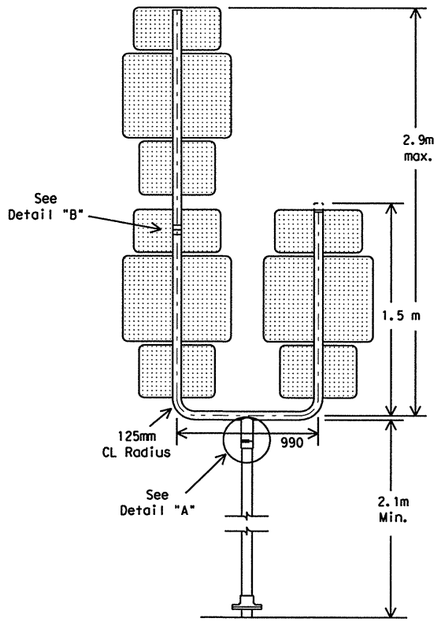


**BOLT KEEPER PLATE**

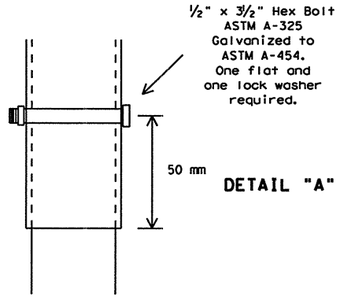
Bolt Keeper Plate shall be 30 gauge galvanized steel.

## PREFABRICATED T'S AND U'S

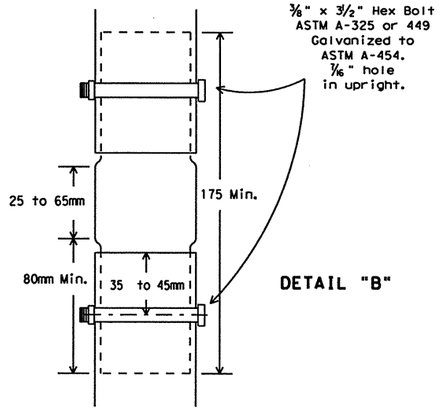




**Refer to SMD(1-1) for "T" and "U" pipe lengths and marker combinations.**



**DETAIL "A"**



**DETAIL "B"**

NOTE:
1. 60 mm OD x 2.4 mm wall tubing swaged to 52 mm OD.
2. Splices will only be allowed behind the sign substrate.

GENERAL NOTES:

Support and design shall conform with AASHTO Standard Specifications for structural supports of Highway signs, luminaires and traffic signals with a design wind speed of 70 mph.

Steel pipe shall be galvanized in accordance to ASTM Designation A123.

Where solid rock is encountered at ground level, the foundation shall be a minimum depth of 450mm. When solid rock is encountered below ground level, the foundation shall extend into the solid rock a minimum depth of 450mm or provide a minimum foundation depth of 750mm. Only concrete foundations shall be used in rock.

TRIANGULAR SLIP BASE NOTES:

1. The Sign Post Base Plate of the Triangular Slip Base shall have the same exterior dimensions as the bottom plate.

2. The Base Plates shall conform with the requirements of ASTM-A36, A441 or A572 Grade 50.

3. All structural steel shall be galvanized in accordance with ASTM A153. The entire support shall be galvanized from the top down to a minimum depth of 6 inches into the foundation. All nuts, bolts and washers shall be galvanized in accordance with the zinc specification of ASTM B454.

4. All high strength bolts shall conform to ASTM-A325 (ASTM A449 may be substituted for ASTM-A325 provided proper bolt head, nut and/or washer clearances are maintained). All high strength nuts shall be of such capacity as to develop the bolt strength.

BOLTING PROCEDURE FOR ASSEMBLY OF BASE CONNECTION:

1 Assemble Sign Post, Bolt Keeper Plate and Stub Post with bolts and flat washers as shown.

2 Shim as required to plumb post. If shims are needed lifting spacer must be used. Shims shall be placed between stub post base plate and lifting spacer.

3 Tighten all bolts the maximum possible with a 300 to 375mm wrench to clean bolt threads and to bed washers and shims.

4 Loosen each bolt in sequence and retighten bolts in a systematic order to the prescribed torque of 54 newton-meters. DO NOT OVERTIGHTEN.

5 To prevent nut loosening, burr threads of bolt at junction with nut using a center punch.

All dimensions are in millimeters unless otherwise noted.

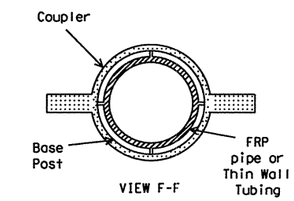
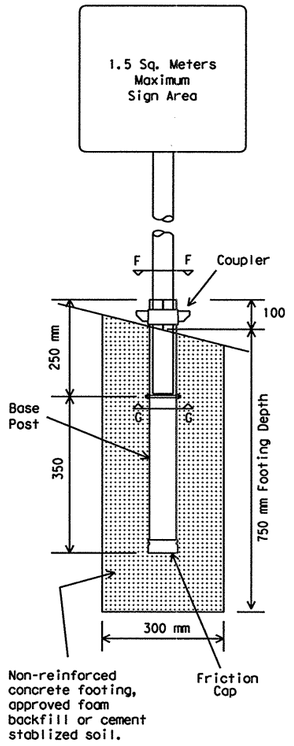
DISCLAIMER
The use of this standard is governed by the "Texas Engineering Practice Act". No warranty of any kind is made by TxDOT for any purpose whatsoever. TxDOT assumes no responsibility for the conversion of this standard to other formats or for incorrect results or damages resulting from its use.

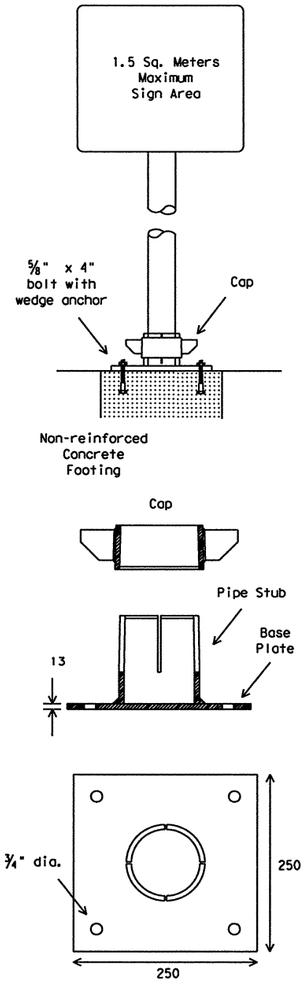
## UNIVERSAL ANCHOR SYSTEM TYPE A

For FRP or Thin Wall Tubing



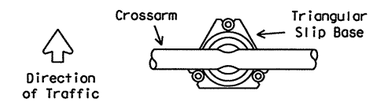


## BOLT DOWN SIGN SUPPORT TYPE A

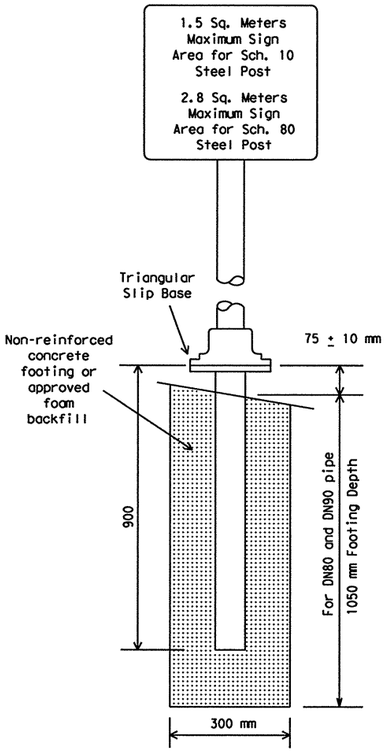


## TEXAS UNIVERSAL TRIANGULAR SLIP BASE

**Types A, A-1, A-2, B, C, D-1, D-2, D-3, D-4, D-5 and F. For additional information on types, refer to SMD(1-1).**

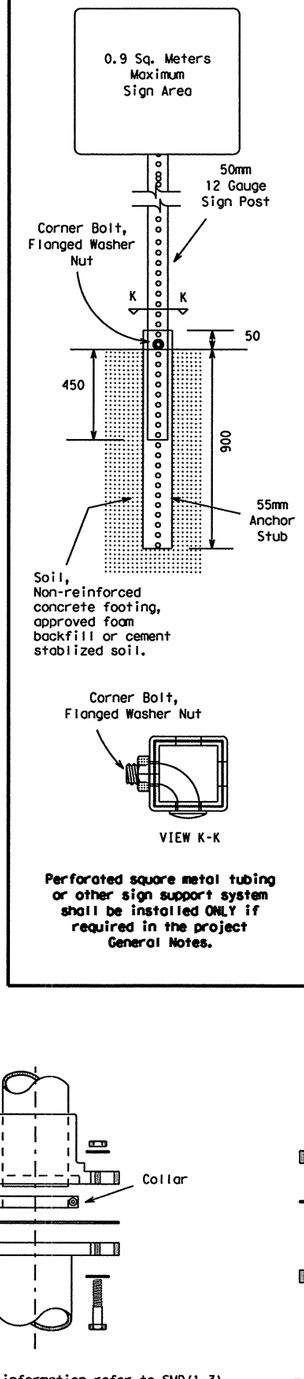


The crossarm should be parallel to one side of the triangular slip base.



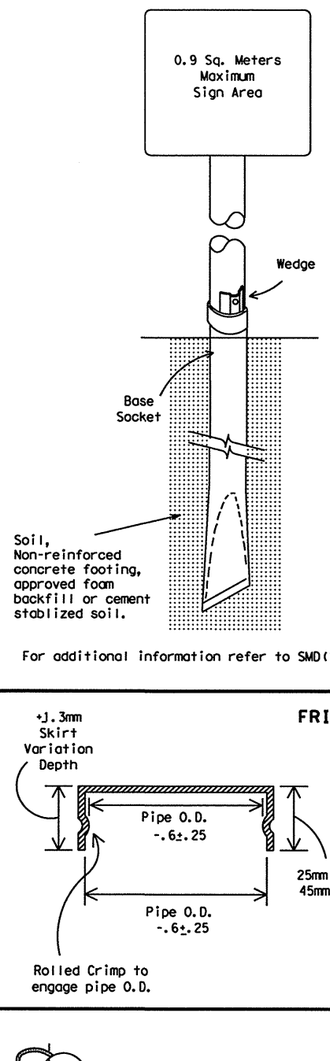
Triangular Slip Base shall be used for signs supported on DN65 pipe posts.

## PERFORATED SQUARE METAL TUBING (DRIVEABLE) TYPE U



**Perforated square metal tubing or other sign support system shall be installed ONLY if required in the project General Notes.**

## WEDGE ANCHOR THIN WALL (DRIVEABLE) TYPE A



For additional information refer to SMD(1-5)

GENERAL NOTES:

The project General Notes may specify a particular sign support.

Support and design shall conform with AASHTO Standard Specifications for structural supports of Highway signs, luminaires and traffic signals with a design wind speed of 60 mph.

Steel pipe shall be galvanized in accordance to ASTM Designation A123.

Where solid rock is encountered at ground level, the foundation shall be a minimum depth of 450 mm. When solid rock is encountered below ground level, the foundation shall extend into the solid rock a minimum depth of 450 mm or provide a minimum foundation depth of 750 mm. Only concrete foundations shall be used in rock.

FRP SUPPORTS

Materials and fabrication shall conform to the requirements of Department Material Specification D-9-4410 and will be furnished in a yellow or gray color as specified elsewhere in the plans.

Thickness of FRP sign support is 3.2 mm + 0.8 mm, - 0.0 mm.

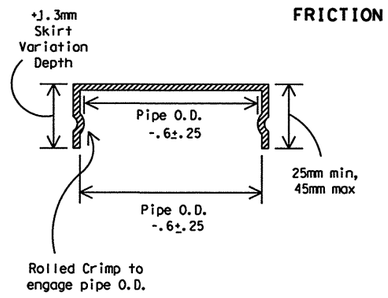
For FRP sign supports, all bolts, nuts, screws, washers and other miscellaneous hardware, shall be type 304 stainless steel or galvanized in accordance to ASTM Designation: A-153, Class C or D, B-695 Class 50 or B633 Class FE/ZN 8 unless otherwise specified.

FRP sign supports for a single type sign support may be used for signs up to and including 1.5 square meters. Dual post installation may be used for signs up to and including 3.0 square meters.

FRP sign supports are prequalified by the Traffic Operations Division. Prequalification procedures are obtained by writing:

TX DOT
Traffic Operations Division
125 E. 11th Street
Austin, Tx 78701-2483.

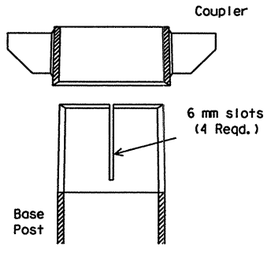
## FRICTION CAP DETAIL



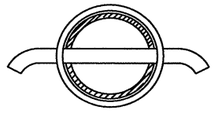
Friction caps may be manufactured from hot rolled or cold rolled steel sheets. The minimum sheet metal thickness shall be 0.61 mm for all cap sizes.

The rim edges shall be reasonably straight and smooth. Caps shall be sized and formed in such a manner as to produce a drive-on friction fit and have no tendency to rock when seated on the pipe. The depth shall be sufficient to give positive protection against entrance of rainwater. They shall be free of sharp creases or indentations and show no evidence of metal fracture.

Caps shall have an electrodeposited coating of zinc in accordance with the requirement of ASTM B633 Class FE/ZN 8.



NOTE: When Thin Wall Tubing is used, rubber insert must be placed in base post.



| SIGN POST SELECTION | |

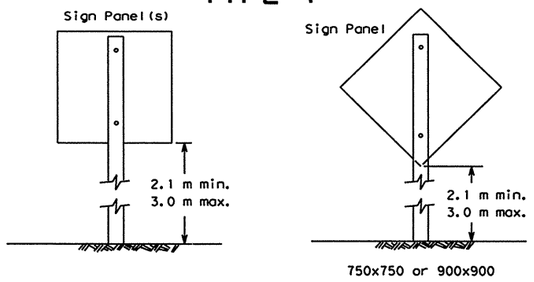
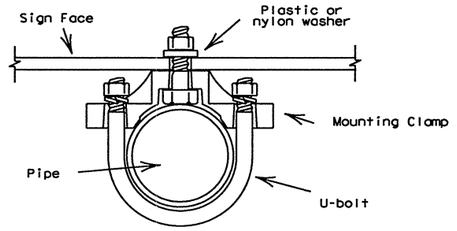
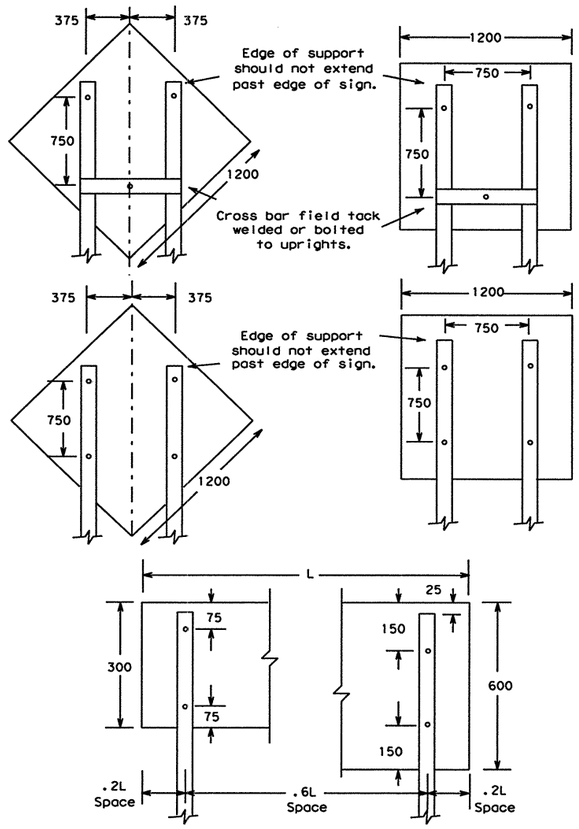
# SINGLE POST INSTALLATION TYPE 1



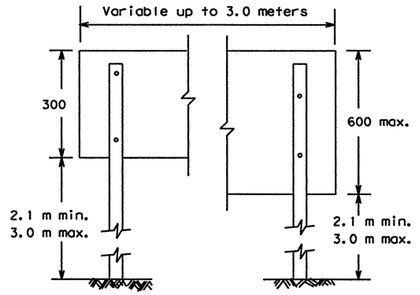
# TYPICAL CLAMP DETAIL

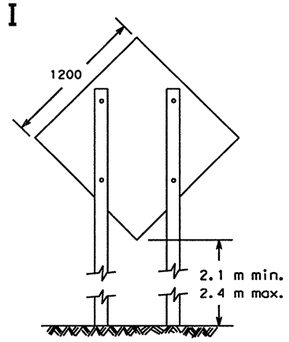


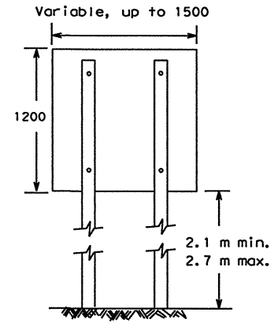
# SIGN ATTACHMENT DETAILS



# DOUBLE POST INSTALLATION TYPE II







1. This sheet should be used with SMD(1-2)(M) and SMD(1-4)(M).
2. See standard sheet SMD(1-2) and TMUTCD for horizontal and vertical clearances.
3. Type I or Type II supports may be used for various sign combinations and or shapes not to exceed the specified maximum sign area.
4. A cross bar between supports and/or behind sign may be used to prevent supports from leaning in areas of soft soils.
5. Cross bars may be made of winged channel post 1.67 kg/m, 2.98 kg/m, 50 mm perforated square metal tubing (wall 2.7 mm thick) or other similar material.
6. Educational plaques may be installed below parent signs or single supports for sign areas up to 0.84 sq. meter.

# ROUTE MARKER ASSEMBLY FOR TWO POST SUPPORT

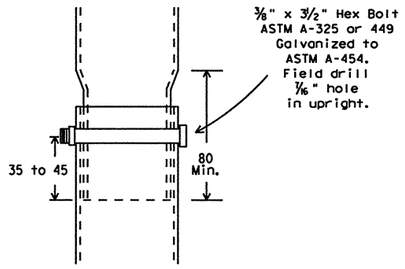
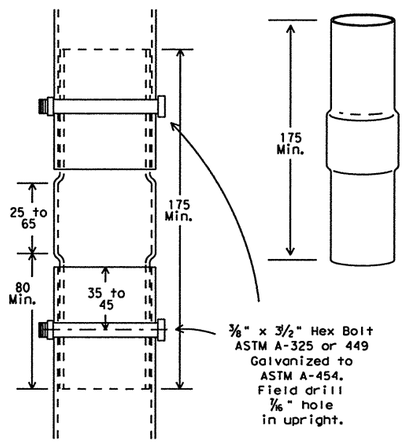
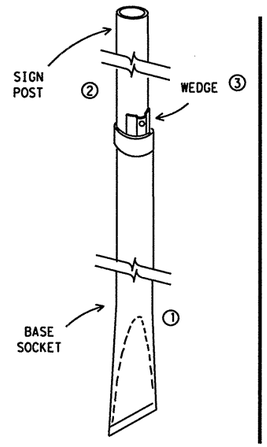
## SPLICE TECHNEQUES THIN WALL TUBE

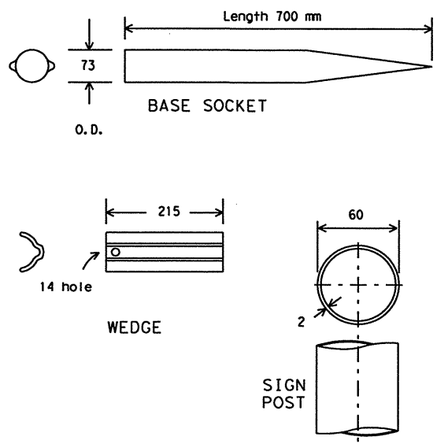




NOTE:
1. 60 mm OD x 2.4 mm wall tubing swaged to 52 mm OD.
2. Splices will only be allowed behind the sign substrate.

## TYPICAL ASSEMBLY





GENERAL NOTES FOR WEDGE ANCHOR THIN WALL TUBE SIGN SUPPORT:

1. The BASE SOCKET is formed from 73 mm O.D. x 12 gauge galvanized pipe.
2. The WEDGE is formed from 3.0 mm thick steel galvanized per ASTM A525.
3. The SIGN POST is 60 mm O.D. x 2 mm thin wall steel tubing.
4. Steel Supports shall be made from new material and shall be corrosion resistant. Steel supports shall be galvanized in accordance with ASTM Designations A123 or A525 (G-90 or better).
5. Supports shall be straight within 4 mm per meter of length and shall have a smooth, uniform finish free from defects affecting strength or appearance. Any bolt holes and sheared ends shall be free from burrs. Bases of multisection supports shall not extend more than 125 mm above ground when installed.
6. Bolts, nuts, screws, washers and other miscellaneous hardware shall be galvanized in accordance to ASTM Designation: A153 Class C or D, or B695 Class 50.

RECOMMENDED ASSEMBLY PROCEDURE

① Drive the BASE SOCKET into the ground until the top of BASE SOCKET is approximately flush with ground level. A flanged tool placed on top of the BASE SOCKET may be helpful. BASE SOCKET MUST be driven plumb.
② Insert SIGN POST into BASE SOCKET and align the sign face with the roadway.
③ Drive the WEDGE between the BASE SOCKET and SIGN POST, thereby locking the SIGN POST inside the BASE SOCKET.

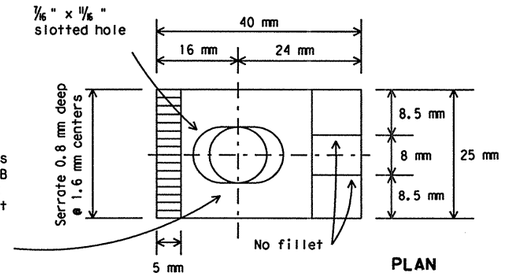
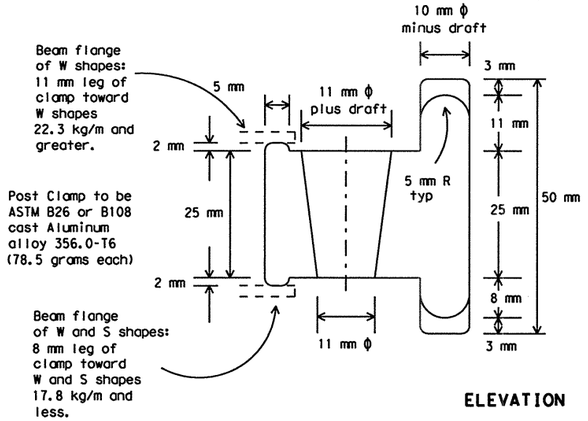
ELEVATION

## ALTERNATE POST CLAMP DETAIL

NOTE: centerline of hole for 3/8" diameter squarehead bolt x 2 1/4" long with a flat washer and self-locking nut, or lock washer and hex. nut. Bolt head dimensions shall be in accordance with ANSI B 18.2.1 as referred to in the AISC Manual of steel construction. Bolt assembly shall be galvanized.

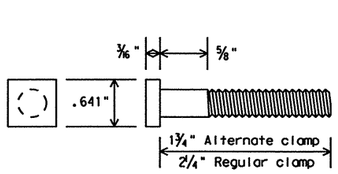


PLAN



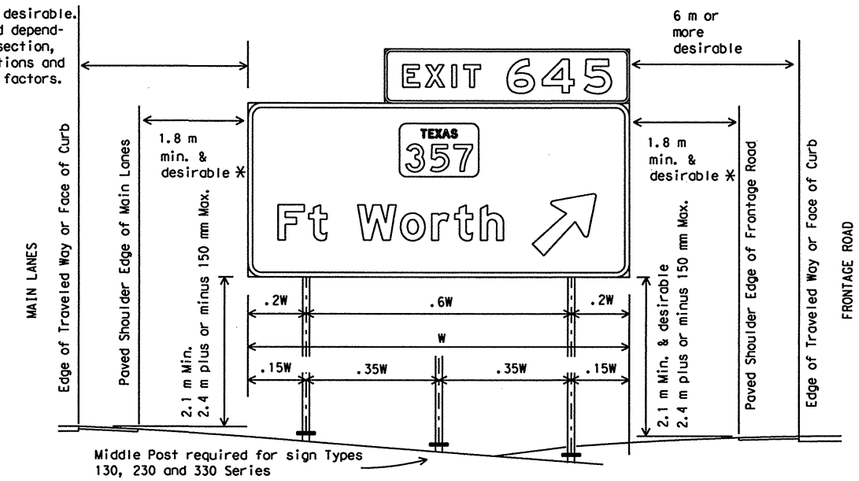
ELEVATION

## POST CLAMP DETAIL



## POST CLAMP BOLT DETAIL

9.1 m or more desirable. May be reduced depending on cross section, viewing conditions and other related factors.



## TYPICAL SIGN INSTALLATION AND LOCATION

LATERAL CLEARANCE NOTES:

Lateral clearances of signs mounted on median side of main lanes are the same as shown above where space will permit.

Where a sign is to be located behind guardrail, an allowable minimum clearance of 0.6 meter may be used, measured from the face of the guardrail to the near edge of sign.

* - 1.8 m minimum and desirable may be used only in areas of limited lateral clearance and when approved by the Engineer.

POST SPACING NOTES:

Post spacing on a two post sign may vary a maximum of plus or minus 10% of total sign width to fit field conditions.

Post spacing on a three post sign may vary a maximum of plus 5% of total sign width to fit field conditions.

SPECIFICATION REFERENCE TABLE
MATERIALS AND TESTS DIVISION SPECIFICATIONS
SIGN HARDWARE D-9-7120

GENERAL NOTES:

1. Design conforms with AASHTO Specifications for the design and construction of structural supports for highway signs.
2. Materials and fabrication shall conform to the requirements of the Department material specifications.
3. Structural steel shall be high strength steel (HS) in accordance with the Item 442, "Metal For Structures."
4. Parts shall be saw cut either before galvanizing and the galvanized cut cleaned of zinc build-up, or saw cut after galvanizing and the cut surface treated with zinc-based solder or zinc-rich paint in accordance with ASTM A780. (Cut surface will not be treated until plate is installed and all bolts fully tightened.)
5. Exit number panel shall be mounted to the right hand side of the parent sign for right exits and to the left for left hand exits. The number panel shall be mounted with two uprights so its right edge is even with the right edge of the parent sign or vice-versa for left hand exits.

All metric dimensions have been rounded and should be considered equivalent to English hardware and specifications. All dimensions are in millimeters unless otherwise noted.

## WIND BEAM TABLES

For sign widths not listed, select next larger sign width from tables for maximum wind beam spacing.

Example: Sign Code = 120, Sign Width = 4.4 m ⟶ select 4.6 m Sign Width
Max. Wind Beam Spacing = 914 mm

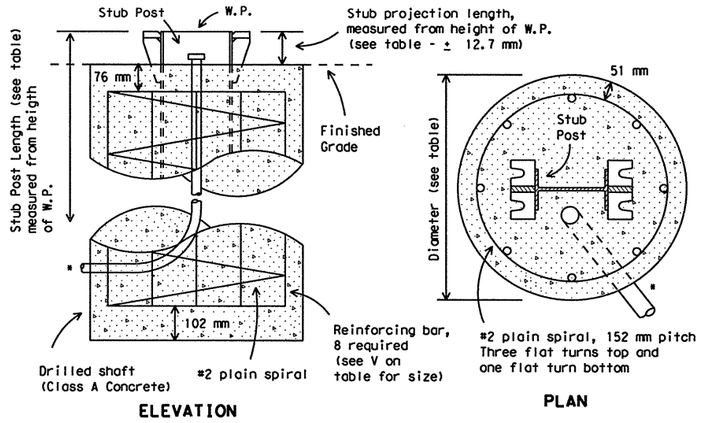
## STIFFENER PLATE DETAIL

Steel Plate (thickness = $t_2$)

(See table for dimensions)



## FOUNDATION DETAIL

*Note: For signs with electrical apparatus, see ED(10) for conduit required in founation.

① Back up weld to be made before installing stiffener plate

② Weld W may be continued across clips to seal joint

## SIGN POST AND STUB POST

(For W Shapes)

BOLTING PROCEDURE FOR ASSEMBLY OF BASE CONNECTION:

1. Assemble sign post, BOLT KEEPER PLATE and stub post with bolts and three flat washers per bolt as shown.
2. Shim as required to plumb post.
3. Tighten all bolts the maximum possible with a 12 to 15 inch wrench to clean bolt threads and to bed washers and shims.
4. Loosen each bolt in sequence and retighten bolts in a systematic order to the prescribed torque. Do not overtighten.
5. To prevent nut loosening, burr threads of bolt at junction with nut using a center punch.

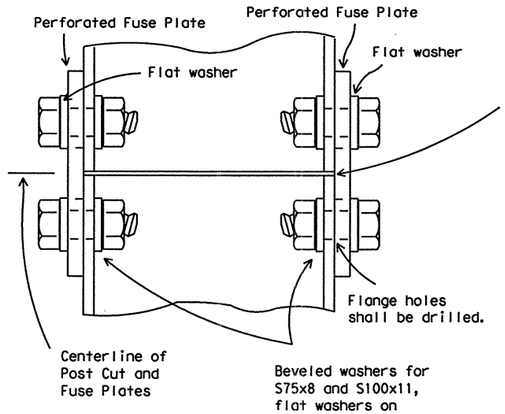
SECTION B-B

## SIGN POST AND STUB POST

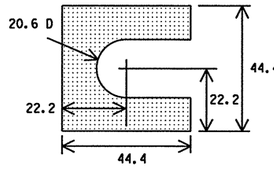
(For S100x11 and S75x8)



## DETAIL "A"

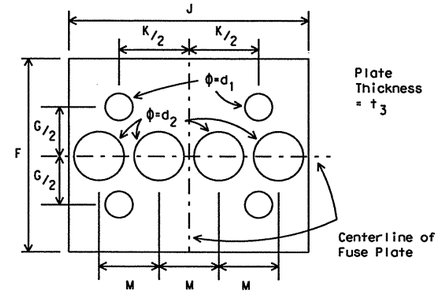
Parts shall be saw cut either before galvanizing and the galvanized cut cleaned of zinc build-up, or saw cut after galvanizing and the cut surface treated with zinc-based solder or zinc-rich paint in accordance with ASTM A780. (Cut surface will not be treated until plate is installed and all bolts fully tightened.)

All metric dimensions have been rounded and should be considered equivalent to English hardware and specifications. All dimensions are in millimeters unless otherwise noted.



## SHIM DETAIL

Furnish two 0.3 mm + thick and two 0.8 mm + thick shims per post. Shims shall be fabricated from brass shim stock or strip conforming to ASTM B36.



## PERFORATED FUSE PLATE DETAIL

Use H.S. hex head bolts, hex head nut and bevel or flat washer (where req'd) under nut. All holes shall be drilled. All plate cuts shall preferably be saw cuts. However; flame cutting will be permitted provided all edges are ground. Metal projecting beyond the plane of the plate face will not be permitted. Steel fuse plates shall conform to the requirements of ASTM A36. ASTM A572 Grade 50 or ASTM A588 may be substituted for A36 at the option of the fabricator. Mill test reports shall be submitted for Fuse Plates. Steel used shall have an ultimate tensile strength not to exceed 550 MPa.

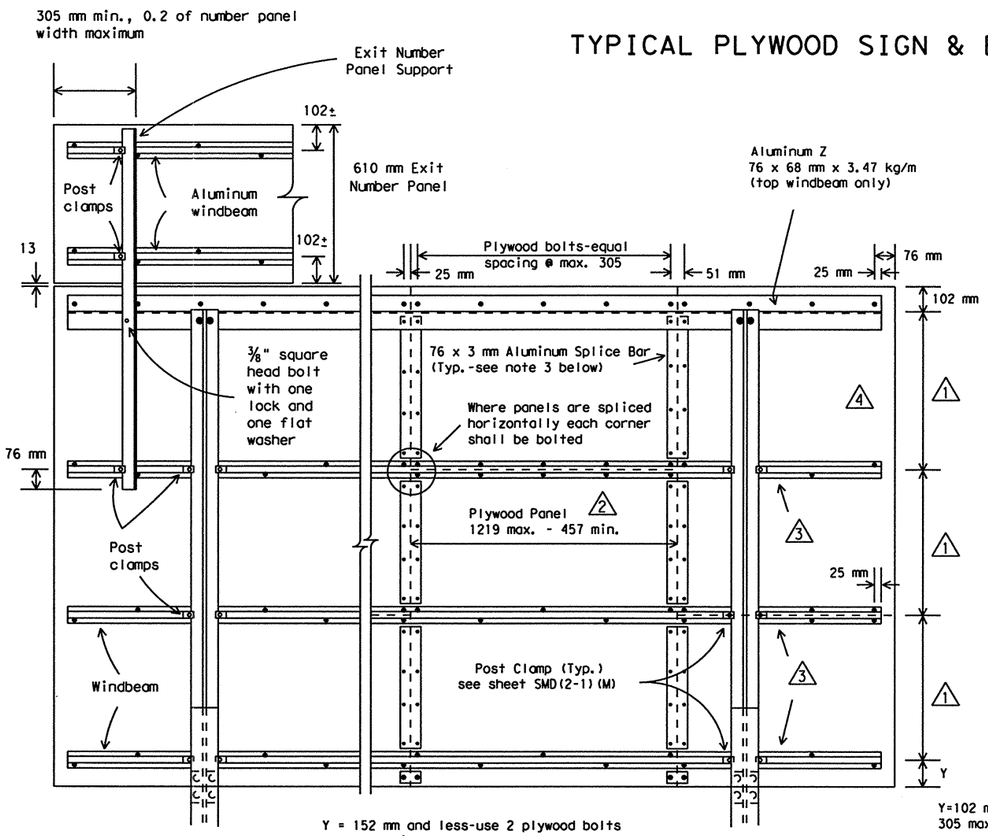
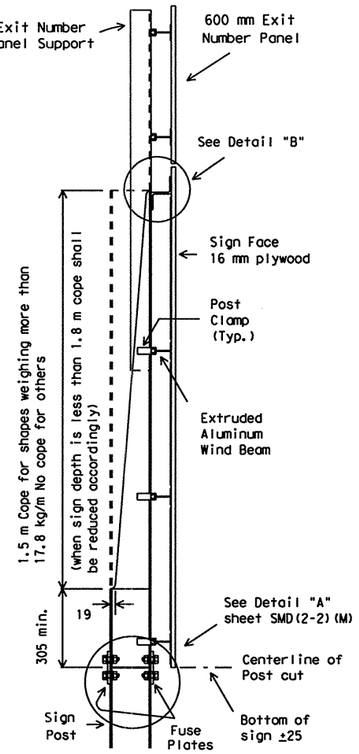
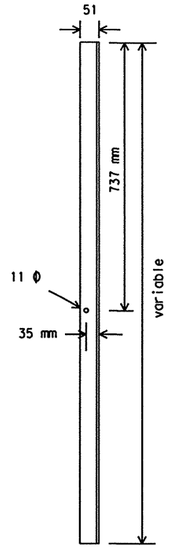
# TYPICAL PLYWOOD SIGN & EXIT PANEL ASSEMBLY DETAILS



REAR VIEW

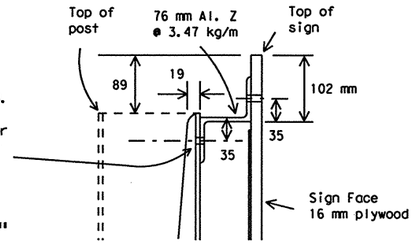


SIDE VIEW

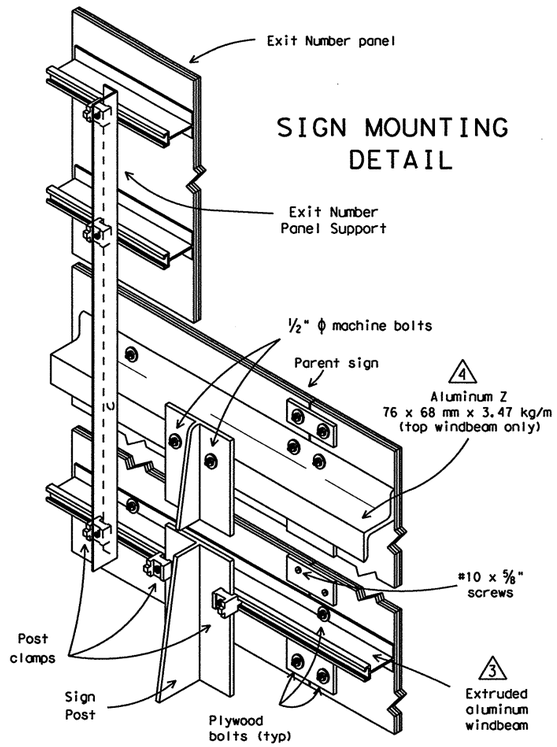


L76 x 51 x 6.4 mm Steel Upright or
L76 x 51 x 9.5 mm Aluminum Upright or
76 mm Windbeam

## EXIT NUMBER PANEL SUPPORT



DETAIL "B"



NOTES:

1. Exit number panel shall be mounted to the right hand side of the parent sign for right exits and to the left for left hand exits. The number panel shall be mounted with two uprights so its right edge is even with the right edge of the parent sign or vice-versa for left hand exits.
2. Exit number panel support shall be symmetrical about number panel centerline.
3. Exit number panel support shall be of ASTM A36 structural steel galvanized after fabrication, or ASTM B221 aluminum alloy 6061-T6.
4. All bolts, nuts and washers shall be galvanized per ASTM Designation: B695 Class 50, or A153 Class C or D.
5. When splice bars are required to fabricate the number panel, the splice bar detail as shown for the parent sign is to be used. Splice bars on number panel need not align with those on parent sign.
6. Posts, parent sign panels and exit number panels shall comply with notes on sheets SMD(2-1)(M) and SMD(2-2)(M).
7. Signs (such as exit number panels) attached above a parent sign shall be made of the same type material as the parent sign.
8. Exit number panel support and other connection hardware required to fasten exit number panel to parent sign shall be subsidiary to the sign blank.

NOTES:

1. A tolerance of plus or minus 6 mm will be permitted in the plan dimensions for fabrication of each single increment sign panel when necessary for squaring. A tolerance of plus or minus 6 mm will be permitted for each increment of a multi-increment sign panel where necessary to secure square, tight-fitting joints.

2. Plywood bolts shall be 5/16" x 1½" elevator type steel with flat or slightly hemispherical head and ¾" minimum thread length. The head shall have a minimum diameter of 11/16 " and a minimum of two fins on the underside. Each bolt shall be provided with one 5/16" steel hex nut, one 5/16" steel flat washer, and one 5/16" steel lock washer. Bolts, nuts and washers shall be galvanized in accordance with ASTM Designation: B695, Class 50, or A153 Class C or D.

3. Splice bars shall be secured with 5/8" long x #10 round head, stainless steel wood screws spaced at 152 mm maximum along double row spacing with the exception at extreme ends of splice bars, along outside edge of sign, where plywood bolts shall be used as shown. A maximum of one horizontal joint per vertical section will be permitted using a 3 mm gap between panels.

4. Splices shall be kept to a minimum. Panels 1.2 x 2.4 m or larger shall be used to the maximum extent possible in the fabrication of any sign. Signs or sign sections which cannot be fabricated from at least a 1.2 x 2.4 m panel shall be of one piece construction.

1. Approximately equal spacing, fabricator may vary spacing for least interference with message and to utilize wind beam for horizontal splice. Wind beam spacing will not exceed the maximum shown in table on sheet SMD(2-1)(M). Staggered arrangement of horizontal splices as shown is preferred. However, a single horizontal joint across the sign face is permissible.

2. For signs 1.2 m or less in height the plywood panel may exceed 1.2 m in width.

3. Extruded aluminum wind beams shall be continuous with no splices. (see sheet SMD(2-1)(M).

4. Aluminum Z will be provided unless stated otherwise in the plans. If noted elsewhere in the plans, 1.75 kg/m extruded aluminum windbeam may be used.

All metric dimensions have been rounded and should be considered equivalent to English hardware and specifications. All dimensions are in millimeters unless otherwise noted.

DISCLAIMER

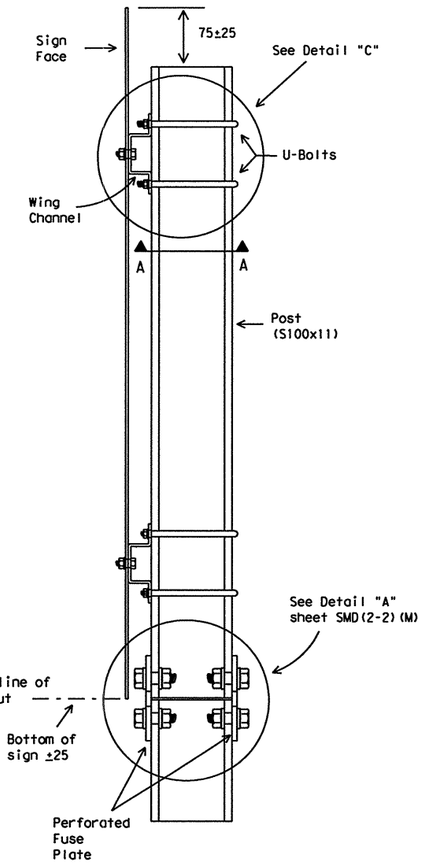
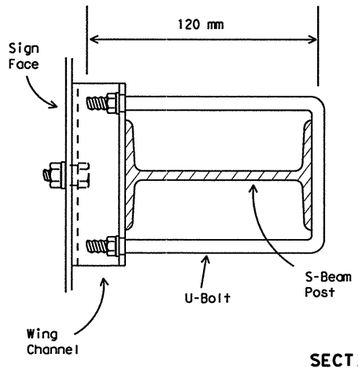
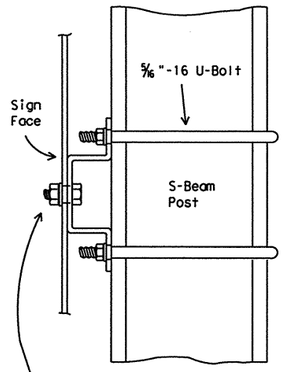
# WING CHANNEL CLAMP DETAIL FOR TYPE G MOUNT



SIDE VIEW

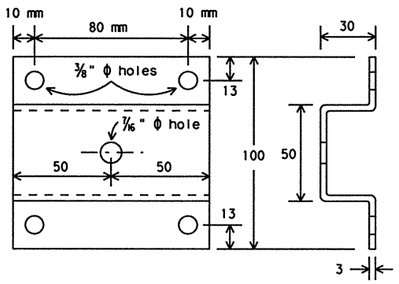


SECTION A-A



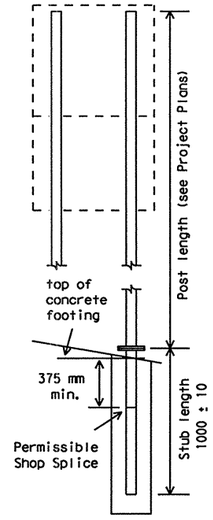
Galvanized steel or aluminum self-locking hex. head nut. 3/8 " - 16 x 3/4 " hex. head bolt for sheet metal. 3/8 " - 16 x 1 1/4 " hex. head bolt for plywood. 3/8 " galvanized medium washer.

**DETAIL "C"**



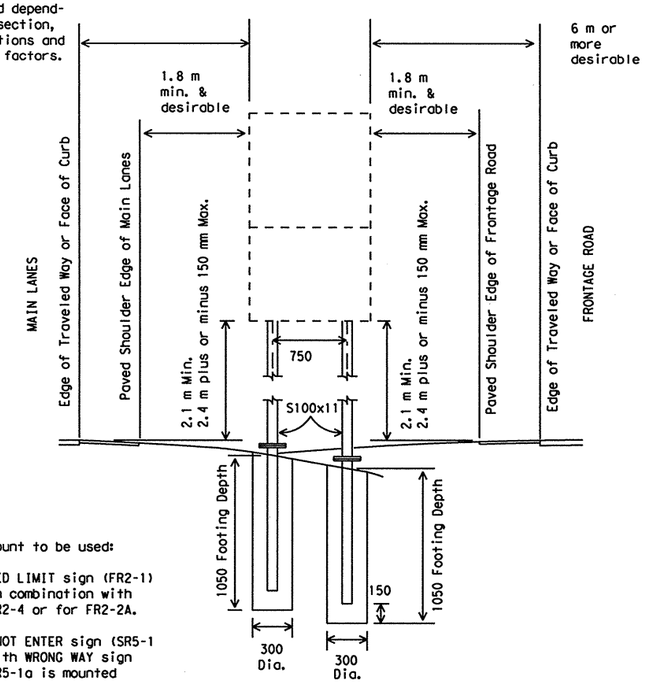
**WING CHANNEL**

Wing channel, 100 mm width x 30 mm depth x 3 mm thickness, shall be aluminum (ASTM B221 6061-T6 or B308 6061-T6), galvanized steel (ASTM A36) or stainless steel (ASTM A167 type 304, No. 2B finish).



The weight of one S100x11 post is equal to 50.9 kg plus 11.5 kg/m x (post length in meters minus 3 m). The weight of 50.9 kg includes 3 m of post length, post foundation stub, related connection plates, friction fuse plate, and all high strength bolts, nuts and washers.

9 m or more desirable. May be reduced depending on cross section, viewing conditions and other related factors.



This type mount to be used:

(1) For SPEED LIMIT sign (FR2-1) when used in combination with FR2-2 and FR2-4 or for FR2-2A.

(2) For DO NOT ENTER sign (SR5-1 when used with WRONG WAY sign (SR5-1a). SR5-1a is mounted above SR5-1.

All metric dimensions have been rounded and should be considered equivalent to English hardware and specifications. All dimensions are in millimeters unless otherwise noted.

| SPECIFICATION REFERENCE TABLE<br>MATERIALS AND TESTS DIVISION SPECIFICATIONS<br>SIGN HARDWARE | D-9-7120 |
|---|---|

GENERAL NOTES:

1. Design conforms with AASHTO Specifications for the design and construction of structural supports for highway signs.
2. Materials and fabrication shall conform to the requirements of the Department material specifications.
3. Structural steel shall be high strength steel (HS) in accordance with Item 442, "Metal For Structures."
4. Parts shall be saw cut either before galvanizing and the galvanized cut cleaned of zinc build-up, or saw cut after galvanizing and the cut surface treated with zinc-based solder or zinc-rich paint in accordance with ASTM A780. (Cut surface will not be treated until plate is installed and all bolts fully tightened.)

GENERAL NOTES:

Design conforms to 1994 AASHTO Standard Specifications for Structural Supports for Highway Signs, Luminaires, and Traffic Signals and Interim Specifications thereto. Design Wind Speed equals 70 mph plus 1.3 gust factor.

Material for pipe shall be ASTM A53 Gr B, or A501. Saddle clamps and base plates shall conform to Special Specification A36M55 or ASTM M193B7 or A687. Nuts for anchor bolt shall comform to ASTM A563 Grade D or better. Bolt, nut and washers shall be galvanized in accordance with specifications.

Bottom anchor bolts for pipe attached to the concrete slab shall be placed using an adhesive doweling system approved by the engineer. Bottom anchor bolts shall have an allowable capacity of 36 kips in tension and 20 kips in shear. Installation of the bottom anchor bolts, including hole depth and diameter, shall be in accordance with the manufacturers' recommendation. If required by the engineer, 3 of the first 10 anchor bolts, and 5% of the remaining anchor bolts shall be tested to 70% of minimum specified yield. The contractor shall provide a suitable ram, pump, pressure gauge and reaction system.

Saddle clamp connection bolts shall comform to ASTM A325 or A449. Bolts, washers and nuts shall be galvanized in accordance with specifications.

Contractor shall verify applicable field dimensions before fabrication.

Core drilling shall be permitted to obtain the hole diameter and recess on existing rails. Percission drilling is not permitted. Patch if spall occors.

For Type 411 Rail, the roadside sign can only be erected by attaching to the pilaster.

NOTE:
Sign panel area is a maximum of 2.78 sq. meters. Pipe mounting supports for the sign panel shall refer to SMD(1-1), (1-2) and (1-3). The diameter of "B" support as shown on these standards shall be DN65.

All dimensions are in millimeters unless otherwise noted.

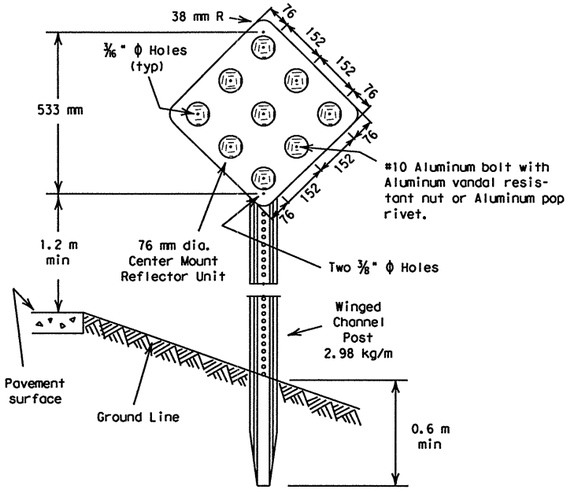
## OBJECT MARKER TYPES 1 and 4



TYPE 1 and 4 Object Markers shall consist of Type (B) Center Mount Reflector Units mounted on 2 mm thick sheet aluminum conforming with ASTM B-209 Alloy 6061-T6.

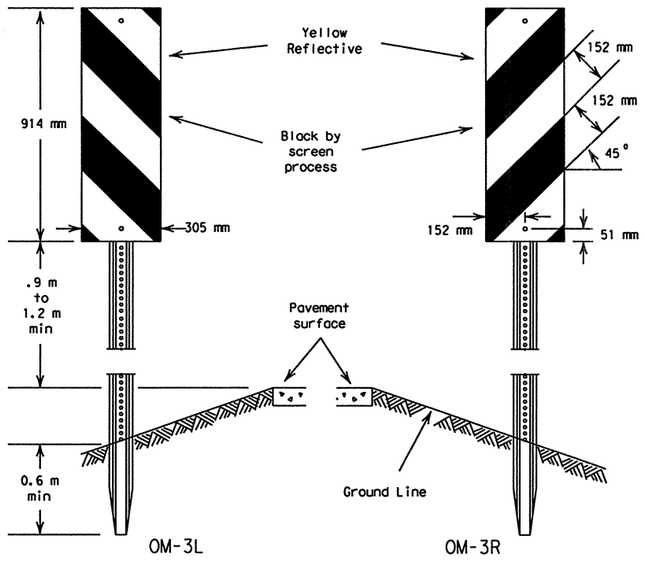
**TYPE 1 OM-1R**

457x457
Reflector Unit - YELLOW
Background - (YELLOW - Non-Reflective)

**TYPE 4 OM-4R**

457x457
Reflector Unit - RED
Background - (RED - Non-Reflective)

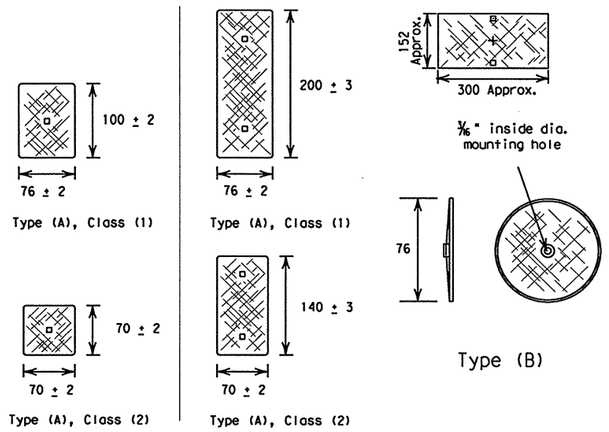
## OBJECT MARKER TYPE 3



Sign blank to be 2 mm thick sheet aluminum conforming to ASTM B-209 Alloy 6061-T6.

Reflective sheeting shall be in accordance with Departmental Material Specification, D-9-8300, Type C.

## TYPICAL REFLECTOR UNITS



Type (A) - Reflective sheeting with pressure sensitive backing. For certain (non-flexible post) applications, reflective sheeting may be directly applied to approved metal, plastic or fiberglass backplate with 17/64" square mounting hole.

It is the contractor's option to provide Class (1) or Class (2) reflective sheeting in accordance with Departmental Material Specification D-9-8600. All reflector units per delineator or object marker shall be of the same type and class of reflective sheeting.

Type (B) - Centermount acrylic plastic prismatic reflector.

SPECIFICATION REFERENCE TABLE

| | |
|---|---|
| MATERIALS AND TESTS DIVISION SPECIFICATIONS | |
| FLEXIBLE DELINEATOR & OBJECT MARKER POSTS (DRIVEABLE & SURFACE MOUNT TYPES) | D-9-4400 |
| FLAT SURFACE REFLECTIVE SHEETING, TYPE C (HIGH SPECIFIC INTENSITY) | D-9-8300 |
| NON-REFLECTIVE BACKGROUND COATING | D-9-8500 |
| DELINEATOR AND OBJECT MARKER | D-9-8600 |

GENERAL NOTES:

1) Delineators shall be uniformily placed not less than 0.6 m nor more than 2.4 m from the edge of shoulder or the face of unmountable curb. They may be placed in line with guardrail where guardrail is used.
2) Object markers shall be located at points designated on the plan.
   When used for marking objects in the roadway or 2.4 m or less from the shoulder or curb, the mounting height to the bottom of the object marker should normally be 1.2 m above the surface of the nearest traffic lane. When used to mark objects more than 2.4 m from the shoulder or curb, the mounting height to the bottom of the object marker may be 1.2 m above the ground line.
   When object markers or markings are applied to a hazardous object which by its nature required a lower or higher mounting, the vertical mounting height may vary according to need.
3) Hardware shall be galvanized steel, stainless steel, or aluminum, except as noted.
4) Posts for supporting delineators and Type 2 object markers shall be 1.67 kg/m winged channel.
5) Type 1, 3 and 4 object marker posts shall be 2.98 kg/m winged channel.
6) Delineator and object markers shall be in accordance with Department Material Specification D-9-8600.

All dimensions are in millimeters unless otherwise noted.

## OBJECT MARKERS TYPE 2

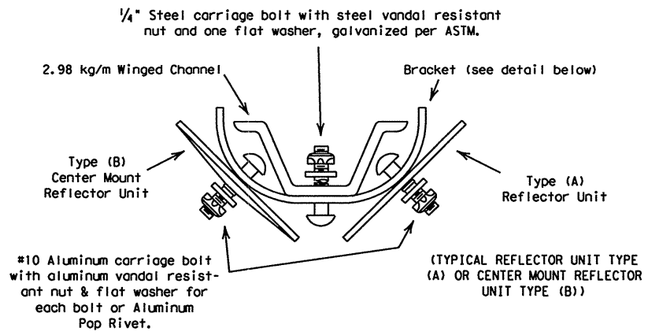
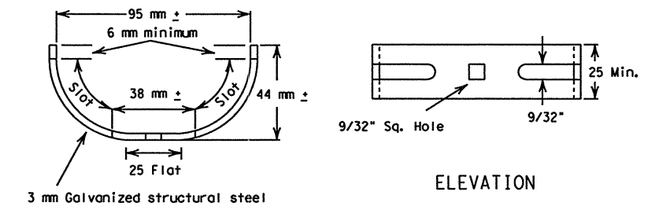
## PLAN VIEW OF BIDIRECTIONAL MOUNTING

For Single Delineators Only

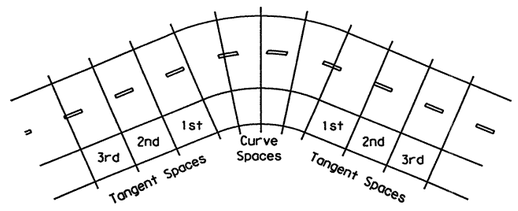
Post oriented as directed by Engineer



## BIDIRECTIONAL BRACKET



## DELINEATORS FOR CURVES OR TANGENT SECTIONS

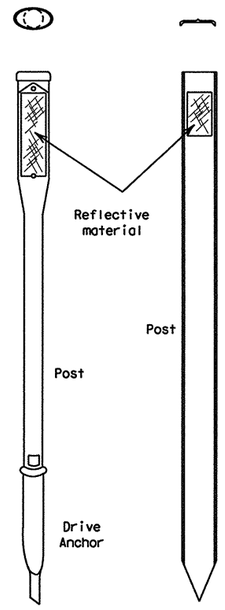


The delineator spacing, S, on the curve is found from the formula $S=1.64\sqrt{R-5}$, where R is the radius of the curve in meters. The first spaces immediately in advance of and beyond the curve are 2.0xS, the second spaces are 3.0xS, and the third spaces are 6.0xS but not to exceed 90 m. Distance for spaces rounded to nearest 1.0 m.

Spacing for Highway Delineators on Horizontal Curve

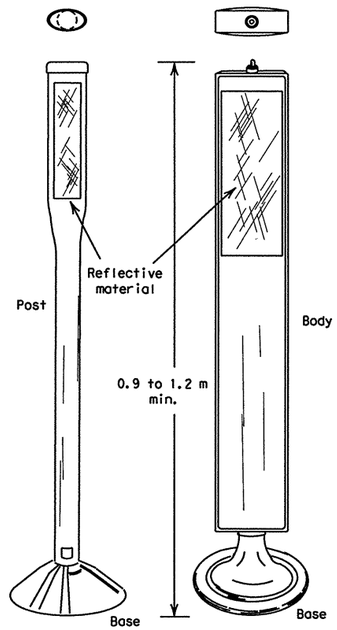
| Degree of Curve | Radius on Curve | Spacing on Curve | Spacing in Advance of and Beyond Curves | | |
|---|---|---|---|---|---|
| | | | First Space | Second Space | Third Space |
| | Meters | Meters | Meters | Meters | Meters |
| 1 | 1746 | 68 | 90 | 90 | 90 |
| 2 | 873 | 48 | | | |
| 3 | 582 | 39 | 79 | | |
| 4 | 437 | 34 | 68 | | |
| 5 | 349 | 30 | 61 | | |
| 6 | 291 | 28 | 56 | 84 | |
| 7 | 249 | 26 | 52 | 78 | |
| 8 | 218 | 24 | 48 | 72 | |
| 9 | 194 | 23 | 46 | 69 | |
| 10 | 174 | 21 | 42 | 63 | |
| 11 | 159 | 20 | 40 | 60 | |
| 12 | 145 | 19 | 38 | 57 | |

## FLEXIBLE POSTS



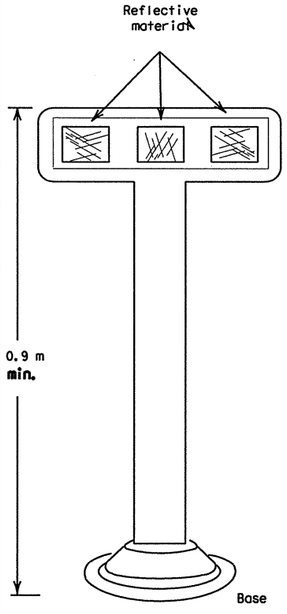
Driveable or Semi-Driveable Delineator Posts

Install to manufacturer's recommendations

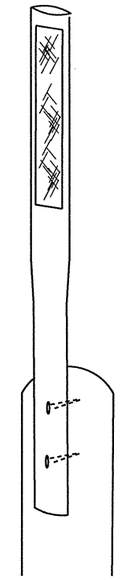


Pavement Surface Mount

Surface mounted delineator posts may use epoxy, or hot bituminous adhesive to mount post to flat surface.



K Marker



Guardrail Post Surface Mount

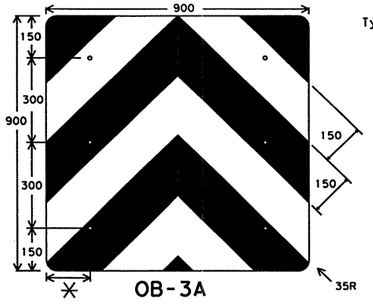
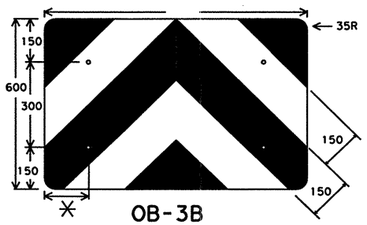
DISCLAIMER
The use of this standard is governed by the "Texas Engineering Practice Act". No warranty of any kind is made by TxDOT for any purpose whatsoever. TxDOT assumes no responsibility for the conversion of this standard to other formats or for incorrect results or damages resulting from its use.

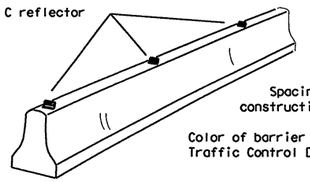


OB-3A



OB-3B

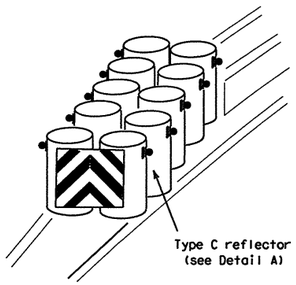
✳adjust to fit attenuator per manufacturer's recommendation, or as directed by the Engineer.



Barrier Reflectors will be installed only on barriers designated for reflectorization as required elsewhere in the plans.

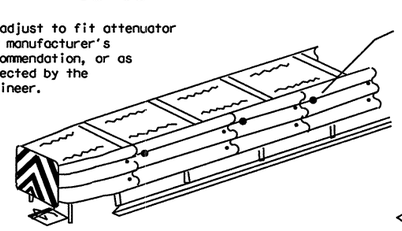
Spacing of reflectors is 12 meters. Mount reflectors to barrier by construction adhesive or butyl rubber adhesive.

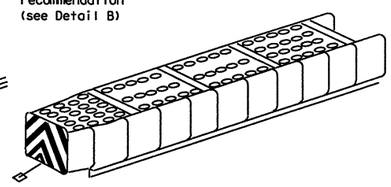
Color of barrier reflectors will conform to the Texas "Manual on Uniform Traffic Control Devices", (TMUTCD).

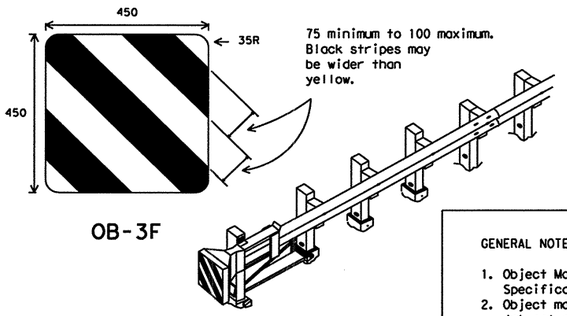


Object Marker blank to be 16 mm Plywood (Type A) in accordance with Item "PLYWOOD SIGNS (TYPE A)" or 2.0 mm thick Aluminum as per Specification D-9-7110.

Mounting should be flush with top of VIA.
Minimum size 900x600 mm.

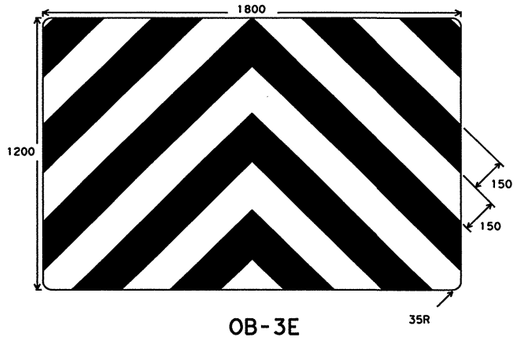




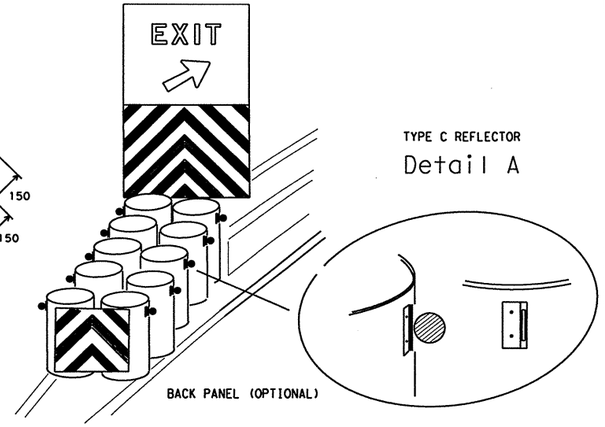


OB-3F

TYPICAL GUARDRAIL END TREATMENT



OB-3E



GENERAL NOTES:

1. Back Panel (OB-3E) shall be made of 16 mm plywood (Type A) panels unless otherwise noted in the plans.
2. Back panel will be mounted independent of the attenuator. The minimum mounting height is flush with the top of the attenuator.
3. Alternating flashing yellow lights may be added. Lights should be mounted minimum 1.8 m above pavement.
4. Attenuator may have additional yellow reflective and black striping, and/or reflectors placed on sides. CHEVRONS (W1-8) may be erected to delineate roadway curvature beyond the attenuator. These additional devices will be installed if required elsewhere in the plans.
5. Mount Back Panel per details on SMD Standards, or as detailed elsewhere in the plans.

GENERAL NOTES: OBJECT MARKERS

1. Object Markers shall conform to the Texas MUTCD and meet the color and reflectivity requirement of Department Material Specification D-9-8300, Type C. Background shall be yellow reflective and Chevron shall be black.
2. Object markers OB-3C, OB-3D and OB-3F may be fabricated from reflective sheeting applied to:
   (a) galvanized sheet metal gage 0.7 to 0.8 mm per ASTM A366.025 nominal, aluminum sheet of 6061-T6 or 5052-H38 alloy approximately 1.6 mm thickness,
   (b) low or medium density polyethelene approximately 2.0 mm thickness, or
   (c) other material as specified in the plans or approved by the Engineer.
3. OB-3F is intended for use only with guardrail end treatments (i.e. GET, CAT, BEST, BRAKEMASTER, SENTRE, etc.). OM-BF may be fabricated from adhesive backed reflective sheeting applied directly to guardrail end treatment, or applied directly to an "end cap" as per the manufacturer's recommendation. Direct applied sheeting shall provide a smooth surface and have no wrinkles, air bubbles, cuts or tears.
4. Size may be reduced to fit smaller devices, however, the minimum size shall be:
   (a) 600x600 mm for attenuators, and
   (b) 450x450 mm for guardrail end treatments.
5. Pop rivets, screws, or nuts and bolts may be used to attach object markers and reflectors. Holes, slots or other openings may be cut or drilled through object markers to allow cable or other attachments.
6. When traffic passes only on one side of attenuator, only the OM-3 marker should be installed. OM-3 should be installed per the requirements of D & OM Standards with a minimum mounting height of 450 mm.

TYPE C REFLECTORS

1. Type C reflectors shall consist of a reflector unit attached to a bracket to facilitate delineator mounting on attenuators, guardrails and concrete traffic barriers.
2. Type C reflectors may also be used to delineate side of attenuator, guardrail and concrete traffic barrier.
3. Type C reflectors shall meet the requirements of D-9-8600.

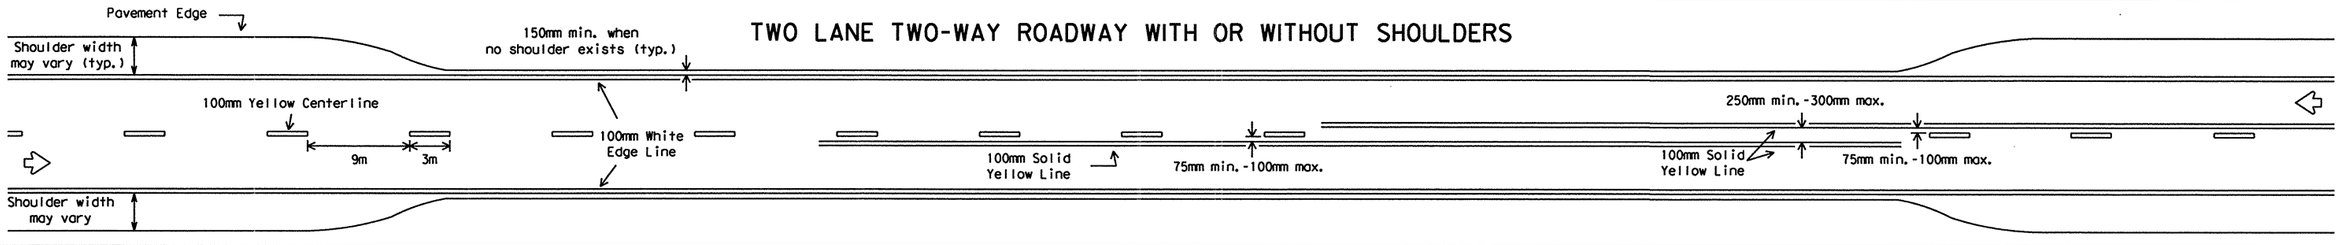
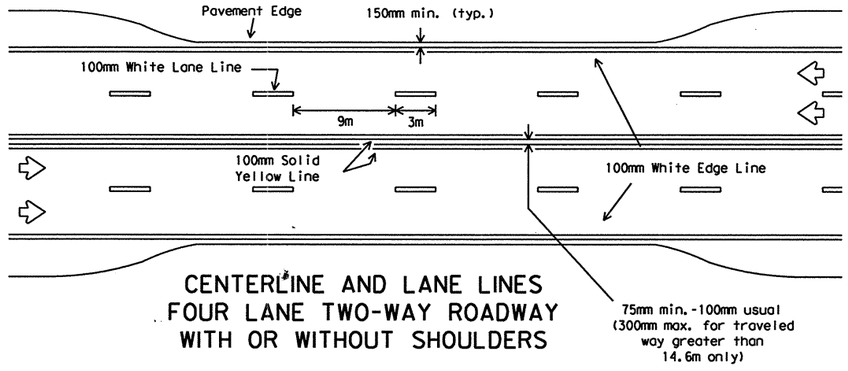
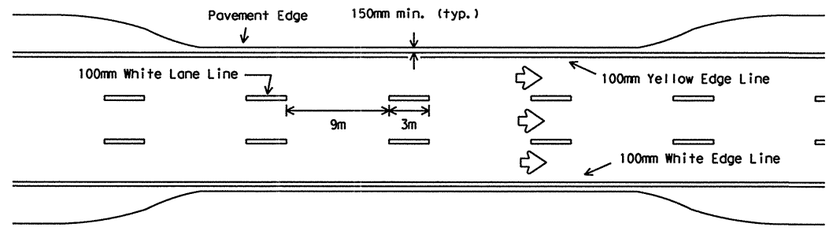
## TWO LANE TWO-WAY ROADWAY WITH OR WITHOUT SHOULDERS



## CENTERLINE AND LANE LINES FOUR LANE TWO-WAY ROADWAY WITH OR WITHOUT SHOULDERS

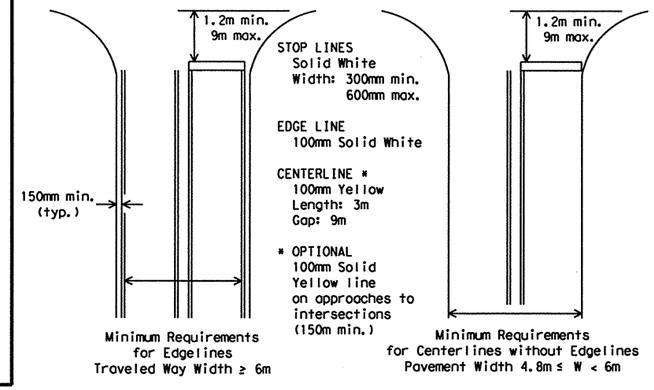


## EDGE LINE AND LANE LINES ONE-WAY ROADWAY WITH OR WITHOUT SHOULDERS

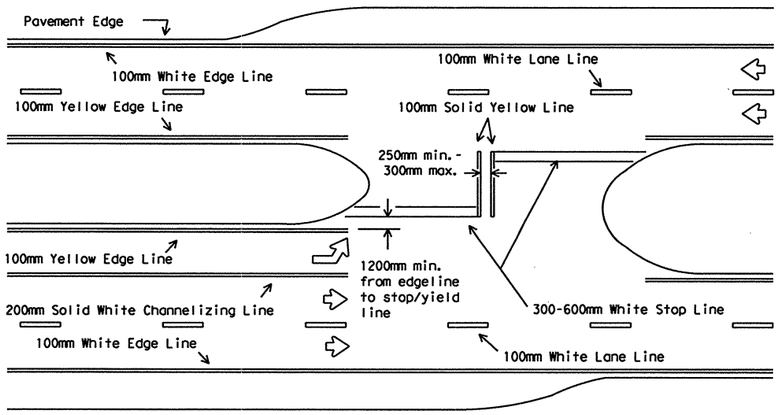


## GUIDE FOR PLACEMENT OF STOP LINES, EDGE LINE & CENTERLINE

Based on Traveled Way and Pavement Widths for Undivided Highways

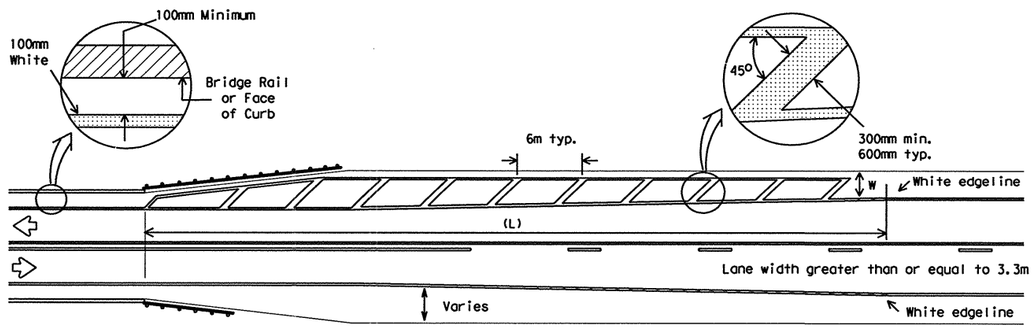


## FOUR LANE DIVIDED ROADWAY INTERSECTIONS



All medians shall be field measured to determine the location of necessary striping. Stop/Yield bars and centerlines shall be placed when the longitudinal distance between the inside of the Stop/Yield bars is 9 meters or greater. If the placement of the Stop/Yield bars would not allow a minimum of 9m distance between the Stop/Yield bars, then no Stop/Yield signs or markings should be installed in the median, unless directed by the Engineer.

## ROADWAYS WITH REDUCED SHOULDER WIDTHS ACROSS BRIDGE OR CULVERT



NOTES:

1. No-passing zone on bridge approach is optional but if used, it shall be a minimum 150m long.
2. For crosshatching length (L) see Table 1.
3. The width of the offset (W) and the required crosshatching width is the full shoulder width in advance of the bridge.
4. The crosshatching should be required if the shoulder width in advance of the bridge is 1.2m or wider and any reduction in shoulder width across the bridge occurs.
5. For guard fence details, refer elsewhere in the plans.

## TABLE 1 - TYPICAL LENGTH (L)

| Posted Speed * | Formula |
|---|---|
| 30, 35, 40 | $L = \frac{WS^2}{60}$ |
| 45, 50, 55, 60, 65, 70 | L=WS |

* 85th Percentile Speed may be used on roads where traffic speeds normally exceed the posted speed limit. Crosshatching length should be rounded up to nearest 1.5m increment.

L=Length of Crosshatching (m) W=Width of Offset (m)
S=Posted Speed (MPH)

EXAMPLES:

A 2.4m shoulder in advance of a bridge reduces to 1.2m on a 70 MPH roadway. The length of the cross-hatching should be:

$L = 2.4 \times 70 = 168m$

A 1.2m shoulder in advance of a bridge reduces to 0.6m on a 40 MPH roadway. The length of the cross-hatching should be:

$L = 1.2(40)^2 / 60 = 32m$

GENERAL NOTES:

Edgeline striping shall be as shown in the plans or as directed by the Engineer. The edgeline should typically be placed a minimum of 150mm from the edge of pavement. This distance may vary due to pavement raveling or other conditions. Edgelines are not required in curb and gutter sections of roadways.

The traveled way includes only that portion of the roadway used for vehicular travel and not the parking lanes, sidewalks, berms and shoulders. The traveled ways shall be measured from the inside of edgeline to inside of edgeline of a two lane roadway.

All pavement marking materials shall meet the required Departmental Material Specifications as specified by the plans.

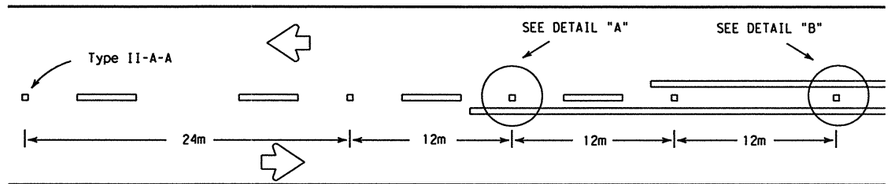
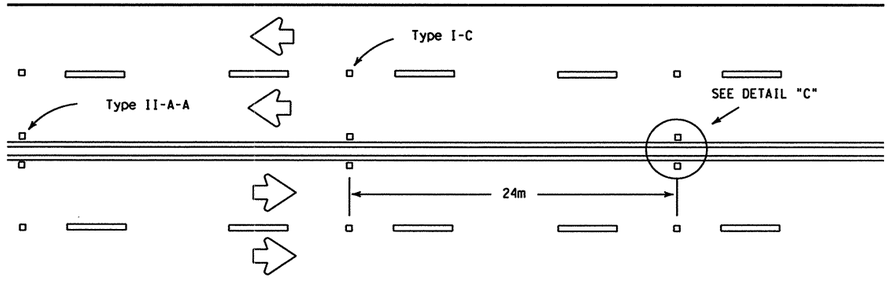
# REFLECTIVE RAISED PAVEMENT MARKERS FOR VEHICLE POSITIONING GUIDANCE

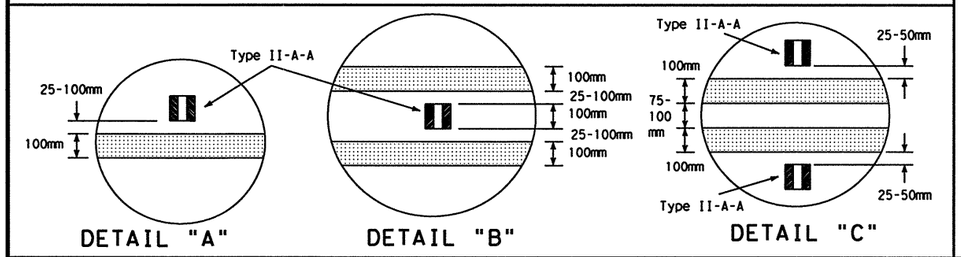


## CENTERLINE FOR ALL TWO LANE ROADWAYS

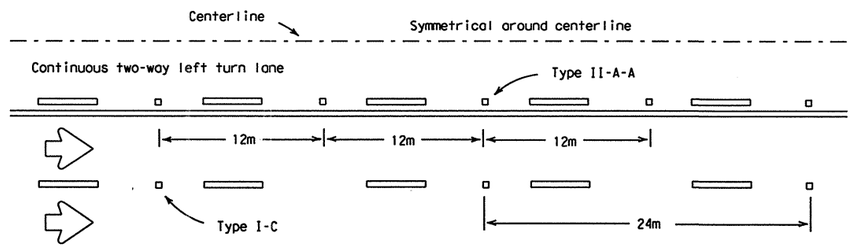


## CENTERLINE & LANE LINES FOR FOUR LANE TWO-WAY HIGHWAYS

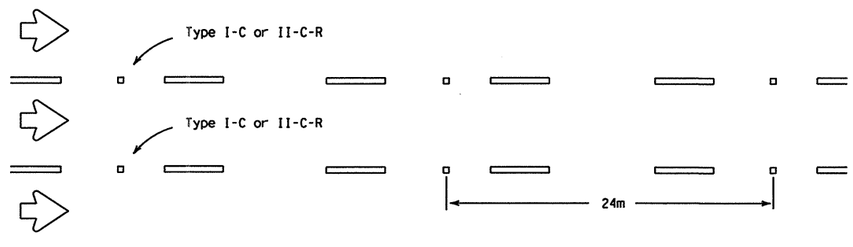
Raised pavement marker Type I-C, clear face toward normal traffic, shall be placed on 24m centers.



DETAIL "A" DETAIL "B" DETAIL "C"



## CENTERLINE AND LANE LINES FOR TWO-WAY LEFT TURN LANE



## LANE LINES FOR ONE-WAY ROADWAY (NON-FREEWAY FACILITIES)

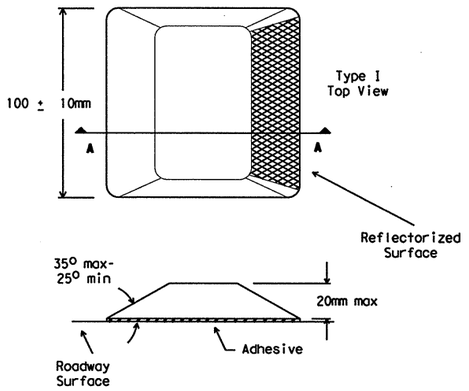
Raised pavement markers Type II-C-R shall have clear face toward normal traffic and red face toward wrong-way traffic.

As required by the Engineer or shown elsewhere in the plans, Type II-C-R or Type I-C markers may be placed on 12m centers for the below listed conditions:

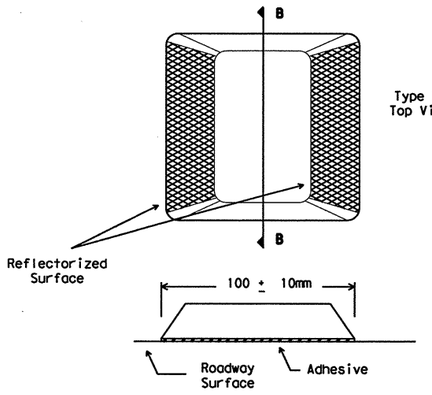
1. horizontal curves,
2. continuously illuminated sections,
3. high volume roadways
4. or roadways where safety concerns exist.

## RAISED PAVEMENT MARKERS

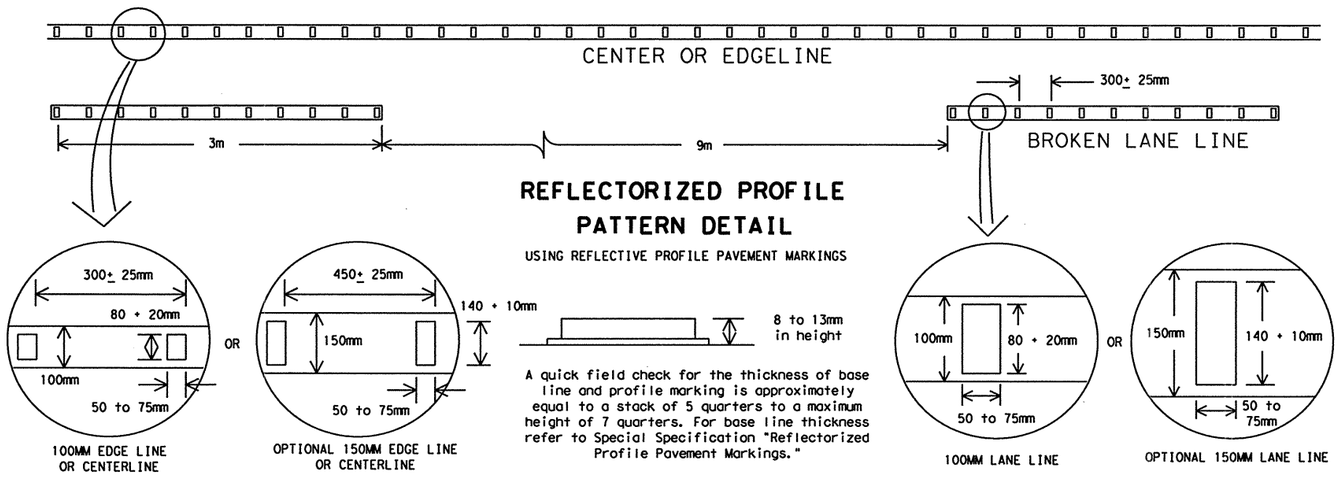
(REFLECTORIZED)



SECTION A



SECTION B



## REFLECTORIZED PROFILE PATTERN DETAIL

USING REFLECTIVE PROFILE PAVEMENT MARKINGS

A quick field check for the thickness of base line and profile marking is approximately equal to a stack of 5 quarters to a maximum height of 7 quarters. For base line thickness refer to Special Specification "Reflectorized Profile Pavement Markings."

GENERAL NOTES:

All raised pavement markers placed in broken lines shall be placed in line with and midway between the stripes.

On concrete pavements the raised pavement markers should be placed to one side of the longitudinal joints.

All pavement marking materials shall meet the required Departmental Material Specifications as specified by the plans.

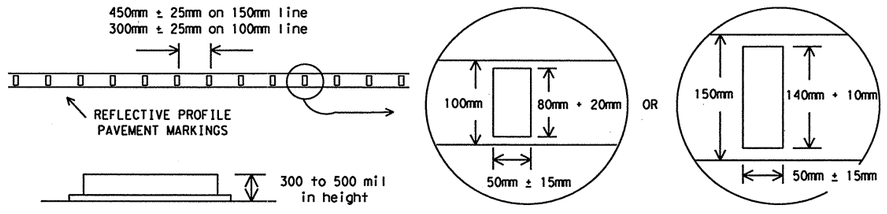
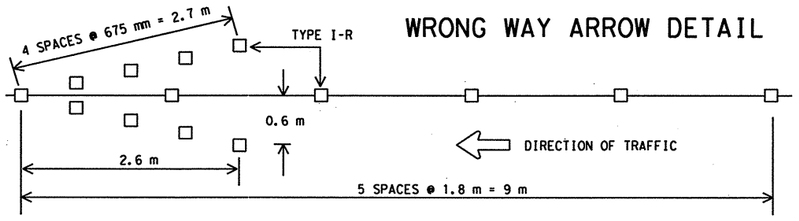
PAVEMENT MARKERS (REFLECTORIZED) TYPE II-C-R SHALL BE SPACED ON 24 METER CENTERS WITH THE CLEAR FACE TOWARD NORMAL TRAFFIC AND THE RED FACE TOWARD WRONG WAY TRAFFIC.

## TRAFFIC LANE LINES PAVEMENT MARKING DETAILS



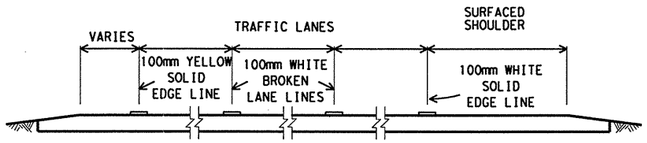
## EDGELINE PAVEMENT MARKING DETAIL



## WRONG WAY ARROW DETAIL

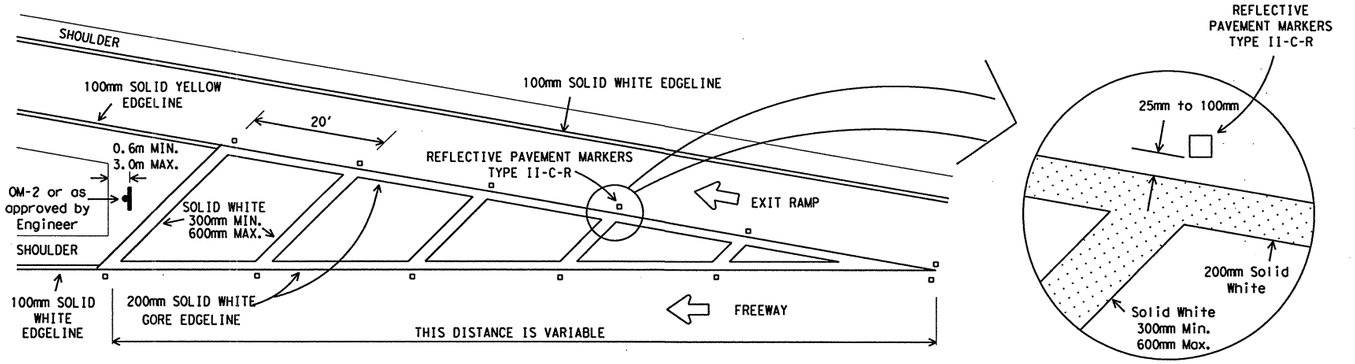
ALL RAISED MARKERS IN THE WRONG WAY ARROW SHALL BE TYPE I-R REFLECTORIZED PAVEMENT MARKERS WITH THE REFLECTORIZED SURFACE FACING THE WRONG WAY TRAFFIC. TYPE II-C-R SHALL NOT BE USED.

REFLECTORIZED WRONG WAY ARROWS, NOT TO EXCEED TWO, MAY BE PLACED ON EXIT RAMPS. LOCATION OF THE ARROWS SHALL BE AS SHOWN IN THE PLANS OR AS DIRECTED BY THE ENGINEER.



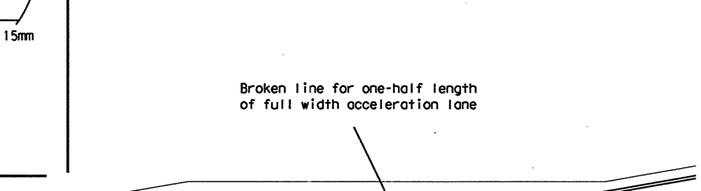
## TYPICAL SECTIONS SHOWING STANDARD PAVEMENT MARKING LOCATIONS

LANE LINES AND EDGE LINES MAY CONSIST OF VARIOUS MATERIALS AS CALLED FOR ELSEWHERE IN THE PLANS.

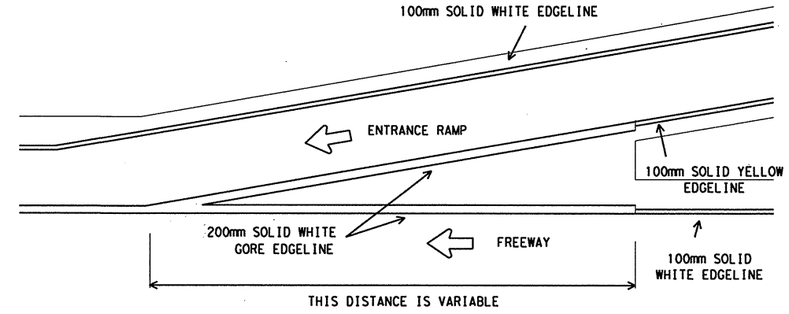


THE SHAPE OF THE GORE MARKING WILL VARY DEPENDING ON THE RAMP DESIGN AND WILL BE AS SHOWN IN THE PLANS OR AS DIRECTED BY THE ENGINEER. OM-2 OR SURFACE MOUNT OBJECT MARKER MOUNTING HEIGHT IS 900mm.

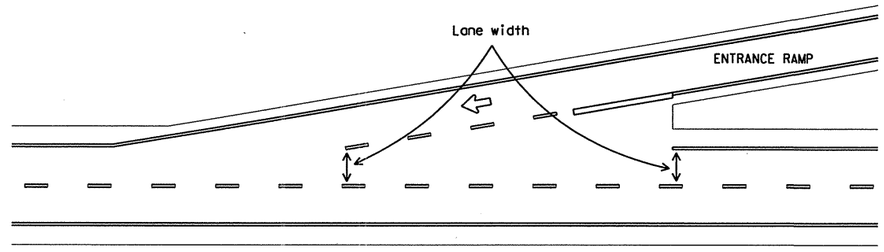
## TYPICAL EXIT RAMP GORE MARKING



## PARALLEL ACCELERATION LANE



## TYPICAL ENTRANCE RAMP GORE MARKING



## TAPERED ACCELERATION LANE

All pavement marking materials shall meet the required Departmental Material Specifications as specified by the plans.

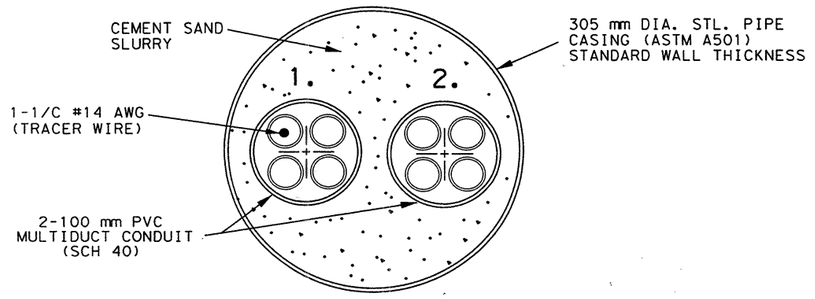
## TYPICAL TRENCH



## TYPICAL BORE

## NOTES:

1. THE LOCATION OF UTILITIES, EITHER UNDERGROUND OR OVERHEAD, SHALL BE VERIFIED BY THE CONTRACTOR BEFORE BEGINNING CONSTRUCTION OPERATIONS.

2. SPECIAL ATTENTION SHOULD BE MADE TO THE EXISTING UTILITIES. THE CONTRACTOR MAY HAVE TO VARY THE DEPTH OF THE TRENCH IN ORDER TO PASS OVER/UNDER ANY EXISTING UTILITY.

3. A TEMPLATE SHALL BE PROVIDED AT 3 m INTERVALS TO INSURE THAT THE CONDUIT REMAINS IN ITS ORIGINAL POSITION AS APPROVED BY THE ENGINEER.

4. A PULL CORD SHALL BE INSTALLED IN ALL INNERDUCTS. THE PULL CORD SHALL HAVE A MINIMUM TENSIL STRENGTH OF 362.8 KG. ALL PULL CORDS SHALL BE WATER RESISTANT AND RESISTANT TO ENVIRONMENTAL CONDITIONS WITHIN CONDUIT. ALL INNERDUCTS SHALL BE PLUGGED WITH EYELET PLUGS AND PULL CORDS SHALL BE ATTACHED TO EYELETS OF PLUGS.

5. A SINGLE 1/C #14 AWG INSULATED CABLE (TRACER WIRE) SHALL BE INSTALLED IN ONE EMPTY CONDUIT FOR ALL RUNS. 1/C #14 SHALL TERMINATE AT EACH MANHOLE. 1/C #14 AWG SHALL BE CONTINUOUS (NO SPLICES PERMITTED) BETWEEN MANHOLES.

6. NO DIRECT PAYMENT SHALL BE MADE FOR THE PULL CORDS, EYELET PLUGS, 1/C #14 AWG, STEEL PIPE CASING, CONCRETE ENCASEMENT, TEMPLATES, BUT THESE SHALL BE CONSIDERED SUBSIDIARY TO THE ITEM [2-WAY SYSTEM].

7. FOR TYPICAL BORE, A 610 MM PLUG OF CEMENT SAND SLURRY SHALL BE INJECTED INTO EACH END OF STEEL PIPE CASING TO MAKE IT WATERTIGHT.

* CONTRACTOR SHALL CONCRETE ENCASE 1524 mm IN DEPTH (WITH CLASS "A" CONCRETE) ANY TRENCHES THROUGH MAINLANES, FRONTAGE ROADS, INTERSECTIONS, OR RAMPS. TOP OF CONCRETE SHALL BE 38 mm BELOW FINISHED GRADE OR AS DIRECTED BY THE ENGINEER. 38 mm OF ASPHALT SHALL BE PLACED ON TOP OF CONCRETE ENCASEMENT TO FINISHED GRADE. ANY ADDITIONAL CONCRETE SHALL NOT BE PAID FOR DIRECTLY BUT SHALL BE CONSIDERED SUBSIDIARY TO THE VARIOUS BID ITEMS.

1524 mm TRENCH FOR 1604 PROJECT

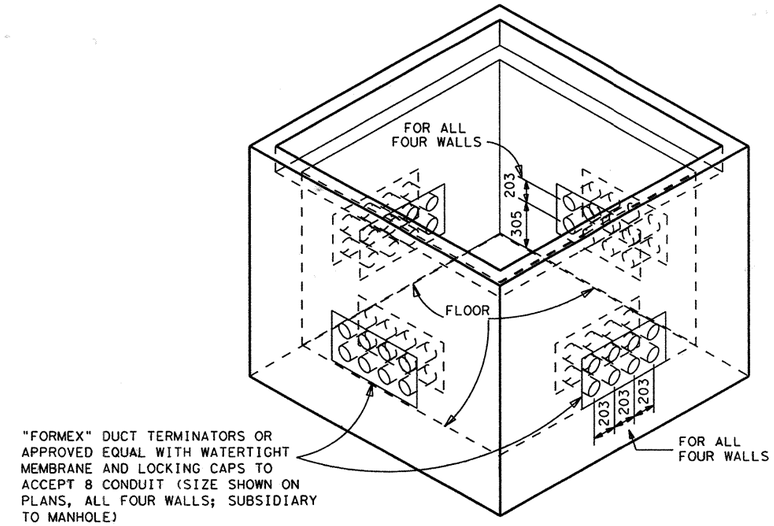
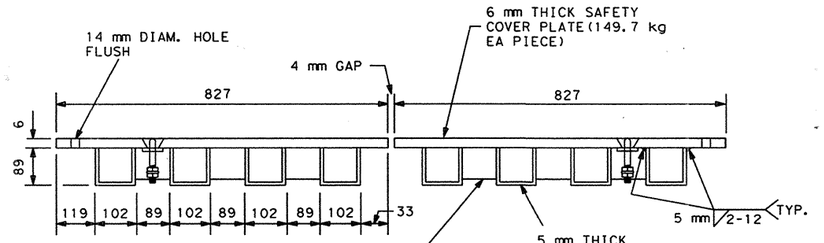
PLAN





LID DETAIL

NOTES:

***ALL DIMENSIONS ARE IN MILLIMETERS UNLESS OTHERWISE NOTED.***

1. ALL CONCRETE SHALL BE CLASS A
2. CONTRACTOR SHALL BE PERMITTED TO SUBMIT EQUIVALENT DESIGN FOR APPROVAL BY THE ENGINEER.
3. ALL STRUCTURAL STEEL SHALL BE HOT DIPPED GALVANIZED
4. ALL STRUCTURAL STEEL SHALL BE DESIGNED FOR H-20 LOADING FOR MANHOLES IN ROADWAY AND H-15 LOADING FOR MANHOLES NOT IN ROADWAY.
5. REINFORCING STEEL SHALL BE ADJUSTED AS NEEDED FOR THE CONDUITS
6. MANHOLE SHALL BE INSTALLED PARALLEL TO GRADE
7. PRIOR TO SETTING, THE CONTRACTOR SHALL PROVIDE A MINIMUM OF 152 mm OF SAND OR BASE MATERIAL SUITABLE AS A BASE TO RECEIVE MANHOLE. THE BASE MATERIAL SHALL BE COMPACTED AND GRADED LEVEL AND AT A PROPER ELEVATION TO RECEIVE THE MANHOLE IN RELATION TO THE CONDUIT GRADE OR GROUND COVER REQUIREMENTS AS DESIGNATED IN THE PLANS.
8. CONDUIT SHALL BE ATTACHED TO 4 HOLES CLOSEST TO R.O.W. LINE.
9. DRAIN HOLE SHALL BE PLACED ON LOW END OF MANHOLE (LOWEST ELEVATION).

# STORM WATER POLLUTION PREVENTION PLAN
## SITE DESCRIPTION

PROJECT LIMITS: Loop 1604 From: 1.6 km North of FM 471
To: US Hwy 90

PROJECT DESCRIPTION:
For work consisting of upgrade to 4 lane divided by adding northbound lanes

MAJOR SOIL DISTURBING ACTIVITIES:

1) Soil disturbing activities will include but are not limited to removal of existing concrete items, excavation and embankment to the proposed roadway subgrade, installation of culverts, and placement of topsoil and seed.
2) Since the project will disturb more than 2 ha (5ac) of land, a Notice of Intent(NOI) will be required.
3) Seven (7) U.S. Army Corps of Engineers (COE) Nationwide Permits #14 are required.

TOTAL PROJECT AREA: 218.85 hectares

TOTAL AREA TO BE DISTURBED: 164.14 hectares

WEIGHTED RUNOFF COEFFICIENT (After Construction): 0.64

EXISTING CONDITION OF SOIL AND VEGETATION COVER AND % OF EXISTING VEGETATIVE COVER:

The existing soil consists of Houston Black Clay and Austin Silty Clay.

Stabilized soil with established native grasses and landscaping covering approximately 65% of the project area.

NAME OF RECEIVING WATERS:

All drainage associated with project primarily feed two watersheds. On the North end, runoff basically drains into Helotes and Culebra Creeks which in turn drains to Leon Creek (stream segement 1906) which drains into the Medina River (stream segment 1903) and then ultimately drains into the San Antonio River (stream segement 1911). The South end of the project runoff basically drains to the Medio and Caracol Creeks which drains to the San Antonio River (stream segment 1911).

## EROSION AND SEDIMENT CONTROLS

SOIL STABILIZATION PRACTICES:

- X Temporary Seeding
- X Permanent Planting, Sodding, or Seeding
- _ Mulching
- _ Soil Retention Blanket
- X Buffer Zones
- X Preservation of Natural Resources

Other: Disturbed areas on which construction activity has ceased (temporarily or permanently) shall be stabilized within 14 days unless construction activities are scheduled to resume within 21 days.

STRUCTURAL PRACTICES:

- X Temporary Sediment Control Fence (Item No. 5012)
- _ Hay Bales
- X Rock filter dam (Item No. 5002)(Temporary)
- _ Diversion, Interceptor, or Perimeter Dikes
- _ Diversion, Interceptor, or Perimeter Swales
- _ Diversion Dike and Swale Combinations
- _ Pipe Slope Drains
- X Paved Flumes (Perm)
- X Rock Bedding at Construction Exit (Item No. 5006)
- _ Timber Matting at Construction Exit
- _ Channel Liners
- _ Sediment Trap
- _ Sediment Basin
- X Storm Inlet Sediment Trap (Temp)
- _ Stone Outlet Structures
- X Curbs and Gutters (Perm)
- _ Storm Sewers
- _ Velocity Control Devices
- X Concrete Truck Washout Pits (as directed by Engineer)

Other: The use of these structural features is largely dependent on the phasing of construction. Therefore, such structural features shall be installed as required and/or at the discretion of the Engineer.

NARRATIVE - SEQUENCE OF CONSTRUCTION (STORM WATER MANAGEMENT)
ACTIVITIES:

The order of activities will be as follows:

1. The Contractor shall limit vegetation & soil disturbance to essential construction sites only.

2. Install project initiation temporary erosion & sedimentation control structures and stabilization features as necessary to protect existing drainage structures and off-site property.

3. Implement phased construction.

4. Adjust erosion & sedimentation control features during phased construction to meet requirements and changing conditions and as directed by the Engineer.

5. When all construction activity is complete and site soils are stabilized to a condition approved by the Engineer, temporary structural controls shall be removed with any vegetation disturbed during this process to be replaced.

DESCRIPTION OF CONTROL MEASURES:

Sediment control fences and rock filter dams shall be placed at select locations as directed by the engineer where storm water drains off-site. Storm water originating on-site and/or storm water originating off-site but draining onto the construction site will be collected in the roadways and/or in drainage channels for discharge off-site. Sediment Control Fences and Rock Filter Dams will filter and slow the velocity of runoff thereby enhancing sedimentation and capture of contaminants that may accumulate in storm water runoff exiting this construction project. Standard sheets for structural practices are included in the construction plans.

MAINTENANCE:

All erosion and sediment control structures and features shall be maintained in good working order to perform the function as intended. If a repair is deemed necessary, the structure shall be repaired or replaced to perform its full function as specified no later than seven calendar days after a storm event, structural damage, or any event creating the structural dysfunction, or as directed by the Engineer. The areas adjacent to creeks and drainageways shall have priority followed by devices protecting storm drains.

INSPECTION:

An inspection shall be performed by a TxDOT Inspector every 14 days as well as after every half inch or more of rain as reported on a non-freezing rain gauge to be located at the project site. An Inspection and Maintenance Report shall be made for each inspection. Based on the inspection results, erosion and sedimentation controls shall be revised as required by the inspection report and as directed by the Engineer.

WASTE MATERIALS:

All waste materials shall be collected and stored in a securely lidded metal dumpster. The dumpster shall meet all state and local city solid waste management regulations. All trash and construction debris from the site shall be deposited in the dumpster. The dumpster shall be emptied as necessary or as required by local regulation and the trash shall be hauled to a local landfill. No construction waste material will be buried on site.

HAZARDOUS WASTE (INCLUDING SPILL REPORTING):

At a minimum, any products in the following categories are considered to be hazardous: paints, acids for cleaning masonry surfaces, cleaning solvents, asphalt products, chemical additives for soil stabilization, or concrete curing compounds and additives. In the event of a hazardous material spill, the TxDOT Spill Coordinator shall be contacted immediately.

SANITARY WASTE:

All sanitary waste shall be collected from portable units as necessary or as required by local regulations by a licensed sanitary waste management contractor.

OFF SITE VEHICLE TRACKING:

- X Haul roads dampened for dust control
- X Excess dirt on road removed on a regular basis or as directed by the Engineer
- X Stabilized construction exit(s)
- X Stabilized construction exits shall be installed at all ingress and egress at the site, including material storage areas.

POST-CONSTRUCTION STORM WATER MANAGEMENT:

Vegetation will be utilized as a natural filter for water quality and for runoff purposes.

REMARKS:

Disposal areas, stockpiles, and haul roads shall be constructed in a manner that will minimize and control the amount of sediment that may enter receiving waters. Disposal areas shall not be located in any wetland, water body, stream bed or 100 yr floodplain.

Construction staging areas and vehicle maintenance areas shall be constructed by the Contractor in a manner to minimize the runoff of pollutants. Such areas shall be bordered on the downgrade sides with temporary sediment control fencing.

All waterways shall be cleared as soon as practicable of temporary embankment, temporary bridges, matting, falseworks, piling, debris or other construction materials placed during construction operations that are not part of the final work.

GENERAL NOTES:

1. Sediment Control Fence shall be installed on the downgrade side of any disturbed area which will discharge storm water runoff off-site, including excavation spoils temporarily stored on-site, as directed by the Engineer.

2. Temporary erosion and sediment control structures placed around drop inlets and placed in drainage channels shall remain in place and be maintained until the drainage area discharging to the erosion control structure and/or feature is adequately stabilized, or as directed by the Engineer.

3. When deemed necessary by the Engineer, vehicular traffic leaving the construction site (prior to stabilized roadways) shall exit through a construction exit and wheel cleaning area at a location directed by the Engineer. When soils have collected on the exit to an extent which reduces its intended effectiveness, the surface shall be cleaned and reestablished for its designed or intended effectiveness. Mud/dirt inadvertently tracked off site and onto public streets shall be removed immediately by hand or mechanical means.

4. Controlled areas on-site shall be designated as rinse-out pits for concrete trucks. Rinse-out pits shall be periodically drained and cleaned and waste shall be disposed of off-site in accordance with applicable regulations. Rinse-out pits shall be surrounded by a berm or hay bales to prevent runoff of contaminated water.

5. Permits required for this job include the following:
   - Notice of Intent (NOI)/EPA NPDES Construction General Permit
   - Six (6) U.S. Army Corps of Engineers (COE) Nationwide Permit # 14

SECTION A-A

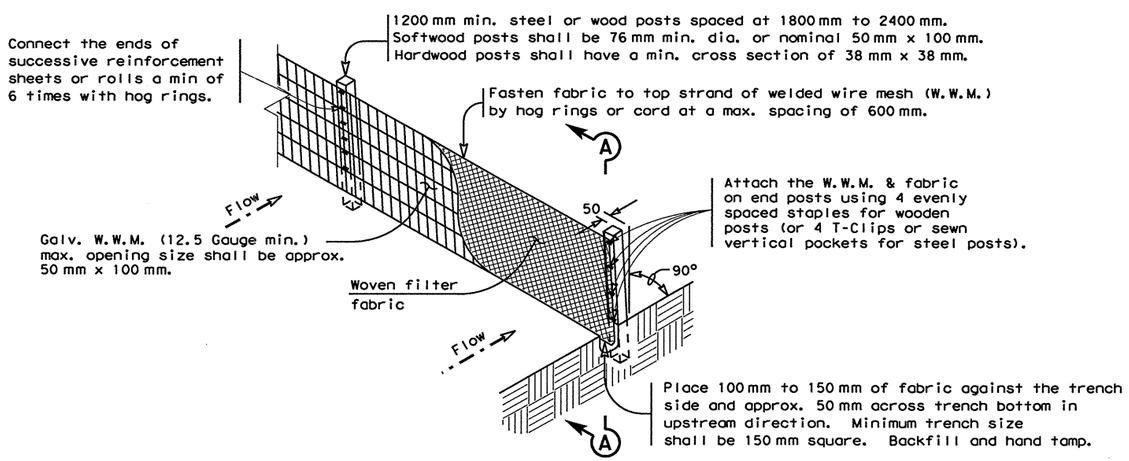
**SEDIMENT CONTROL FENCE USAGE GUIDELINES**

A sediment control fence may be constructed near the downstream perimeter of a disturbed area along a contour to intercept sediment from overland runoff. A 2 year storm frequency may be used to calculate the flow rate to be filtered.

Sediment control fence should be sized to filter a max. flow through rate of 0.07 $\frac{m^3/sec}{m^2}$. Sediment control fence is not recommended to control erosion from a drainage area larger than .8 ha.

**GENERAL NOTES**

1. The guidelines shown hereon are suggestions only and may be modified by the Engineer.



TEMPORARY SEDIMENT CONTROL FENCE

DISCLAIMER:
The use of this standard is governed by the "Texas Engineering Practice Act". No warranty of any kind is made by TxDOT for any purpose whatsoever. TxDOT assumes no responsibility for the conversion of this standard to other formats or for incorrect results or damages resulting from its use.

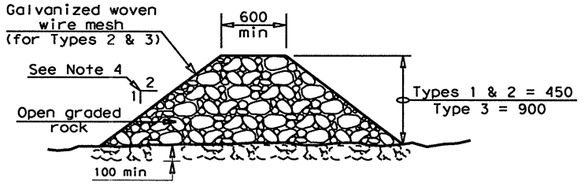
## PROFILE



## SECTION C-C

## ROCK FILTER DAM USAGE GUIDELINES

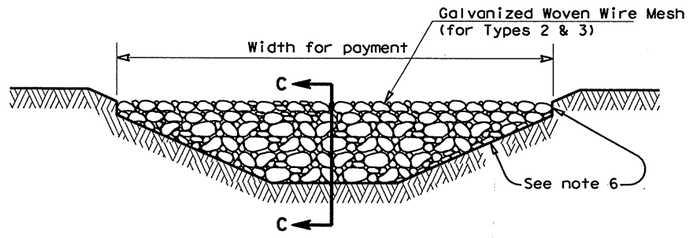
Rock Filter Dams should be constructed downstream from disturbed areas to intercept sediment from overland runoff and/or concentrated flow. The dams should be sized to filter a maximum flow through rate of 0.04 $\frac{m^3/sec}{m^2}$ of cross sectional area. A 2 year storm frequency may be used to calculate the flow rate.

Type 1 (450 mm high with no wire mesh): Type 1 may be used at the toe of slopes, around inlets, in small ditches, and at dike or swale outlets. This type of dam is recommended to control erosion from a drainage area of 2 ha. or less. Type 1 may not be used in concentrated high velocity flows (approx. 2.4 m/sec or more) in which aggregate wash out may occur. Sandbags may be used at the embedded foundation (100 mm deep min.) for better filtering efficiency of low flows if called for on the plans or directed by the Engineer.

Type 2 (450 mm high with wire mesh): Type 2 may be used in ditches and at dike or swale outlets.

Type 3 (900 mm high with wire mesh): Type 3 may be used in stream flow and should be secured to the stream bed.

Type 4 (Sack gabions): Type 4 May be used in ditches and smaller channels to form an erosion control dam.



## FILTER DAM AT CHANNEL SECTIONS

(RFD1) OR (RFD2) OR (RFD3)
TYPE 1 OR TYPE 2

## GENERAL NOTES

1. If shown on the plans or directed by the Engineer, filter dams should be placed near the toe of slopes where erosion is anticipated, upstream and/or downstream at drainage structures, and in roadway ditches and channels to collect sediment.
2. Materials (aggregate, wire mesh, sandbags, etc.) shall be as indicated by the specification for "Rock Filter Dams for Erosion and Sedimentation Control".
3. The rock filter dam dimensions shall be as indicated on the SW3P plans.
4. Side slopes should be 1:2 (vertical : horizontal) or flatter. Dams within the safety zone shall have sideslopes of 1:6 or flatter.
5. Maintain a minimum of 300 mm between top of rock filter dam weir and top of embankment for filter dams at sediment traps.
6. Filter dams should be embedded a minimum of 100 mm into existing ground.
7. The sediment trap for ponding of sediment laden runoff shall be of the dimensions shown on the plans.
8. Rock filter dam types 2 & 3 shall be secured with 20 gauge galvanized woven wire mesh with 25 mm diameter hexagonal openings. The aggregate shall be placed on the mesh to the height & slopes specified. The mesh shall be folded at the upstream side over the aggregate and tightly secured to itself on the downstream side using wire ties or hog rings. In stream use the mesh should be secured or staked to the stream bed prior to aggregate placement.
9. Sack Gabions should be staked down with #6 bars.
10. Flow outlet should be onto a stabilized area (vegetation, rock, etc.).
11. The guidelines shown hereon are suggestions only and may be modified by the Engineer.

R = Radius
D = Diameter

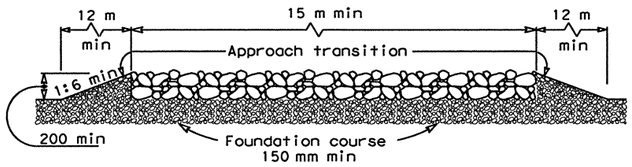
PLAN

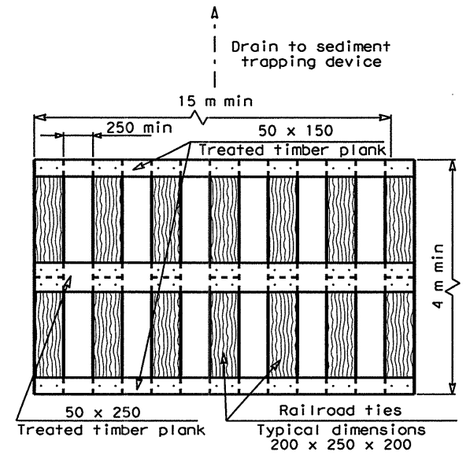


PROFILE

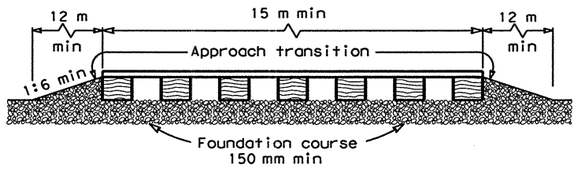
## CONSTRUCTION EXIT (TYPE 1)

### GENERAL NOTES

1. The length of the type 1 construction exit shall be as indicated on the plans, but not less than 15 meters.
2. The coarse aggregate should be open graded with a size of 50 mm to 200 mm.
3. The approach transitions should be no steeper than 1:6 (vertical : horizontal) and constructed as directed by the Engineer.
4. The construction exit foundation course shall be flexible base, bituminous concrete, Portland cement concrete or other material as approved by the Engineer.
5. The construction exit shall be graded to allow drainage to a sediment trapping device.
6. The guidelines shown hereon are suggestions only and may be modified by the Engineer.



PLAN

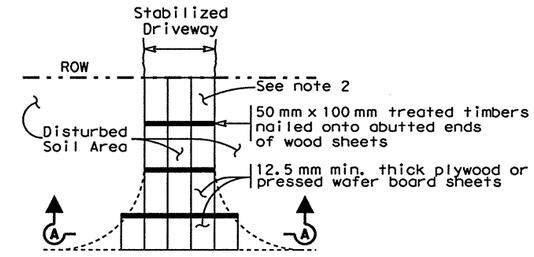


PROFILE

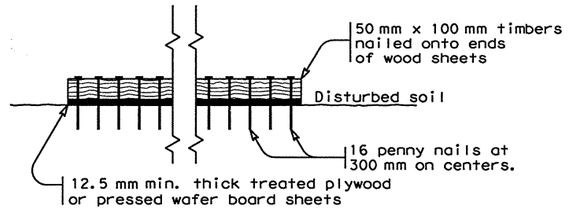
## CONSTRUCTION EXIT (TYPE 2)

### GENERAL NOTES

1. The length of the type 2 construction exit shall be as indicated on the plans, but not less than 15 meters.
2. The treated timber planks shall be attached to the railroad ties with 12.5 mm x 15 mm min. lag bolts. Other fasteners may be used as approved by the Engineer.
3. The treated timber planks shall be #2 grade min., and should be free from large and loose knots.
4. The approach transitions should be no steeper than 1:6 (vertical : horizontal) and constructed as directed by the Engineer.
5. The construction exit foundation course shall be flexible base, bituminous concrete, Portland cement concrete or other material as approved by the Engineer.
6. The construction exit should be graded to allow drainage to a sediment trapping device.
7. The guidelines shown hereon are suggestions only and may be modified by the Engineer.



PLAN



SECTION A-A

## CONSTRUCTION EXIT (TYPE 3)

### GENERAL NOTES

1. The length of the type 3 construction exit shall be as shown on the plans, or as directed by the Engineer.
2. The type 3 construction exit may be constructed from open graded crushed stone with a size of 50 to 100 millimeters spread a min. of 100 mm thick to the limits shown on the plans.
3. The treated timber planks shall be #2 grade min., and should be free from large and loose knots.
4. The guidelines shown hereon are suggestions only and may be modified by the Engineer.

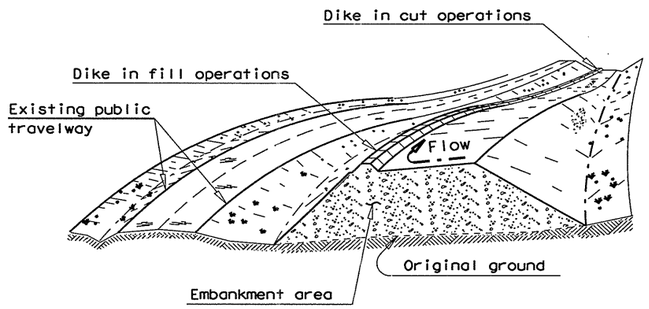
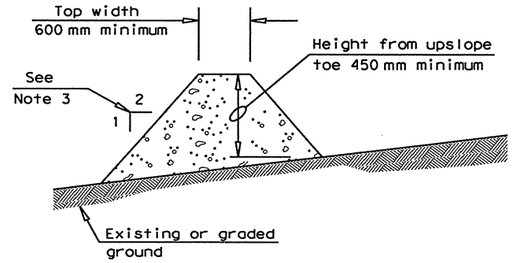
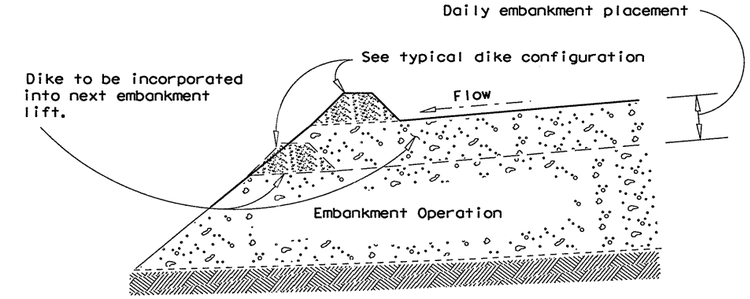
## PERIMETER DIKE



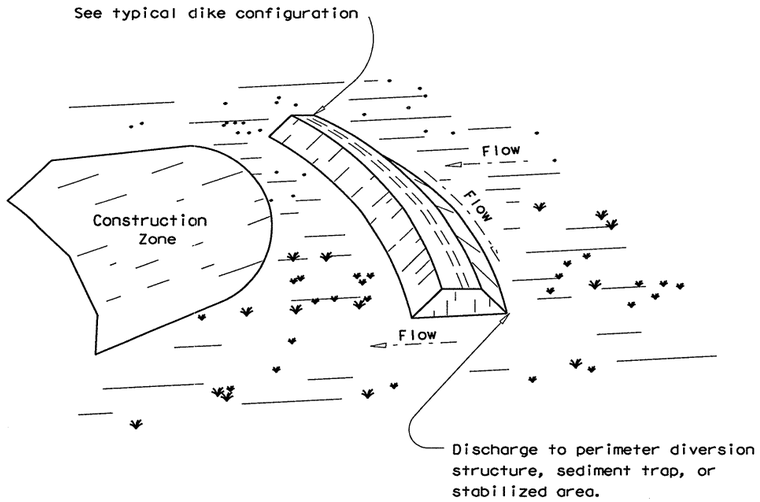
## DIVERSION DIKE



## TYPICAL DIKE CONFIGURATION



## EMBANKMENT SECTION - DIVERSION DIKE



## INTERCEPTOR DIKE

## DIKE USAGE GUIDELINES

A dike may be used to intercept runoff and divert it around unstabilized areas or to divert sediment laden runoff to an erosion control device (sediment basin or trap, rock filter dam, etc.).

The drainage area contributing runoff to a dike should not exceed 2 ha. The spacing of dikes should be as follows:

| Slope of disturbed areas above dike | greater than 10% | 5 - 10% | less than 5% |
|---|---|---|---|
| Maximum distance between dikes | 30 m | 60 m | 90 m |

Intercepted runoff flowing along a dike should outlet to a stabilized area (vegetation, rock, etc.).

## GENERAL NOTES

1. Soil used in dike construction shall be machine compacted.
2. Top width and height of dike may be modified with prior approval of the Engineer.
3. Side slopes within the safety clear zone of a roadway shall be 1:6 (vertical: horizontal) or flatter.
4. Grading shall be shown elsewhere in the plans or as directed by the Engineer.
5. The Engineer reserves the right to modify the dimensions shown for the dike dependent on runoff volume characteristics.
6. Dikes that are in place for more than 14 calendar days should be stabilized to prevent sediment runoff.
7. The guidelines shown hereon are suggestions only and may be modified by the Engineer.

DIVERSION DIKE WITH SWALE

## SWALE AND DIKE/SWALE USAGE GUIDELINES

A swale or dike/swale may be used to intercept runoff and divert it around unstabilized areas or to divert sediment laden runoff to an erosion control device (sediment basin or trap, rock filter dam, etc.).

The drainage area contributing runoff to a swale or dike/swale should not exceed 2 ha. The spacing of swales and dike/swales should be as follows:

| Slope of disturbed areas above dike | greater than 10% | 5 - 10% | less than 5% |
|---|---|---|---|
| Maximum distance between dikes | 30 m | 60 m | 90 m |

Intercepted runoff flowing in a swale or dike/swale should outlet to a stabilized area (vegetation, rock, etc.).

## GENERAL NOTES

1. Dimensions of swale may be modified with prior approval of the Engineer.
2. Side slopes within the safety clear zone of a roadway shall be 1:6 (vertical: horizontal) or flatter.
3. Grading shall be shown elsewhere on the plans or as directed by the Engineer.
4. The Engineer reserves the right to modify the dimensions shown for the swale dependent on runoff volume characteristics.
5. Swales that are in place for more than 14 calender days should be stabilized through seeding or other measures to control sediment runoff.
6. The guidelines shown hereon are suggestions only and may be modified by the Engineer.

R = Radius
D = Diameter

All unit-less dimensions are millimeters

## SEDIMENT BASIN & TRAP USAGE GUIDELINES

A sediment basin and/or trap may be used to precipitate sediment out of runoff draining from an unstabilized area.

Basins: The drainage area for a sediment basin should not exceed 40 ha. The basin capacity shall be at least 125 $m^3$/ha of drainage area (13mm over the drainage area). If the disturbed area draining to the basin is larger than 4 ha, the basin capacity should be 250 $m^3$/ha (25mm over the drainage area).

The basin should have a 40 hour draw-down time with an emergency spillway. The spillway may be designed to pass the peak rate of runoff from a 25 year frequency storm. The 100 year storm should be investigated to consider possible flooding impacts.

The entrance into the basin should be protected from erosion. The basin should be cleaned when the capacity has been reduced by one-third.

Traps: The drainage area for a sediment trap should not exceed 2 ha. The trap capacity should be 125 $m^3$/ha (13mm over the drainage area).

Sediment traps should be placed in the following locations:
1. Within drainage ditches spaced at 150 ± meters on center
2. Immediately preceding ditch inlets
3. Just before the drainage enters a water course
4. Just before the drainage leaves the right of way

The trap outlet may either be through a perforated riser and pipe assembly designed to achieve a 40 hour draw-down time or over a level stabilized area (vegetation, rock, etc.).

The trap should be cleaned when the capacity has been reduced by one-half or the sediment has accumulated to a depth of 300 mm, whichever is less.

## GENERAL NOTES

1. Pipe outlet material shall conform to the Item "Pipe Underdrains" or as accepted by the Engineer.
2. All pipe connections shall be watertight.
3. Side slopes within the safety clear zone of a roadway shall be 1:6 (vertical : horizontal) or flatter. Protect the traveling public from inlet stacks within the clear zone.
4. Sediment basins shall have side slopes of 1:3 (vertical: horizontal) or flatter.
5. The dimensions and limits of excavation for sediment basins and traps will be as shown elsewhere on the plans.
6. The sandbag material shall be made of polypropylene, polyethylene or polyamide woven fabric, min. unit weight 125 grams/$m^2$, Mullen burst strength exeeding 2000 kPa and ultraviolet stability exeeding 70%.
7. The guidelines shown hereon are suggestions only and may be modified by the Engineer.

| PSD 24 | 600 | 1.4 ha |
| PSD 30 | 750 | 2.0 ha |

## GENERAL NOTES

1. The inlet pipe shall have a slope of 3 percent or greater. Pipe diameter shall be as indicated on the construction drawings.
2. The top of embankment shall be at least 300 mm than the top of the inlet pipe at all points.
3. The pipe shall be galvanized corrugated metal pipe, PVC, or flexible tubing with watertight connection bands.
4. Pipe shall be secured with hold-down grommets spaced a maximum of 3000 mm on centers or with pipe hold downs as shown in Detail B.
5. The sediment trap shall be constructed to the dimensions as shown and in accordance with Special Specification. "Earthwork for Erosion Control". As otherwise detailed on the plans, the sediment trap may be stabilized using concrete or rubble riprap as per item,"Riprap".
6. A standard flared entrance section shall be used with the pipe slope drain. See TxDOT standard MH-1 for details.
7. The guidelines shown hereon are suggestions only and may be modified by the Engineer.

# PIPE SLOPE DRAIN WITH ENERGY DISSIPATOR

### PIPE SLOPE DRAIN USAGE GUIDELINES

A Pipe Slope Drain (PSD) should be constructed to drain concentrated surface runoff safely down slopes without causing erosion. The drainage area contributing runoff to a PSD should not exceed 2 ha. The PSD should be sized to drain the peak rate of runoff without over-topping at the earth dike enrtance. A 25 year storm frequency may be used to calculate the flow rate.

R = Radius
D = Diameter

All unit-less dimensions are millimeters

PAVED FLUME USAGE GUIDELINES

A Paved Flume should be constructed to drain concentrated surface runoff safely down slopes without causing erosion. The drainage area contributing runoff to a paved flume should not exceed that given in the Design Criteria above. The paved flume should be sized to drain the peak rate of runoff without overtopping the embankment at the earth dike entrance. A 25 year storm frequency may be used to calculate the flow rate.

GENERAL NOTES

1. The group/size is a designater for the dimensions of the paved flume. The group/size is designated by a letter (A or B) and the bottom (B) dimension. The appropriate size shall be indicated on the construction plans.
2. For high velocity flows, the aggregate of the energy dissipator should be secured with 20 gauge galvanized woven wire mesh with 25 mm diameter hexagonal openings. The aggegrate should be placed on the mesh to the dimensions specified. The mesh shall be folded at the upstream side over the aggegrate and tightly secured to itself on the downstream side using wire ties or hog rings.
3. The guidelines should hereon are suggestions only and may be modified by the Engineer.

1. CONTRACTOR SHALL VERIFY THAT ALL PLANTING MEETS THE FOLLOWING MINIMUM STANDARDS:
   SHRUBS/TREES: 9.0 METERS FROM EDGE OF TRAVELED LANE UNLESS PROTECTED BY A CURB OR OTHER BARRIER.

2. APPLY SOLUTION OF 15-30-15 HIGH SOLUBLE FERTILIZER (EX: RAPID GRO OR MIRACLE GRO OR AS APPROVED BY ENGINEER) ACCORDING TO DIRECTIONS. APPLY 3.8L (1 GAL.) PER 13 MM (1/2") CALIPER OF PLANT TO PLANTING PIT, APPLY NO LESS THAN 3.8L OF FERTILIZER SOLUTION PER TREE.

3. PLANT MATERIAL SHALL BE PLANTED AS TO NOT INTERFERE WITH THE SIGHT LINE OF TRAFFIC, SIGNS, OR LIGHTS. PLANT MATERIAL SHALL NOT IMPEDE EXISTING DRAINAGE OF THE SITE OR REQUIRED CLEAR ZONES, FIELD ADJUSTMENTS MAY BE WITH THE APPROVAL OF THE ENGINEER.

4. SPECIES SHALL BE DISTRIBUTED AMONG THE FOUR PLANTING GROUPS AS TO HAVE APPROXIMATELY EQUAL NUMBERS OF EACH SPECIES DIVIDED AMONG THE FOUR GROUPS (FOR EXAMPLE, 9 CEDAR ELM, 10 LIVE OAK AND 9 LACEY OAK).

5. TREES SHALL BE PLANTED IN AN ALTERNATING PATTERN IN ORDER TO SIMULATE A NATURAL ENVIRONMENT OR AS DIRECTED BY THE ENGINEER. TREES SHALL NOT INTERFERE WITH CLEAR ZONE, UTILITIES, DRAINAGE OR SIGNING. THERE ARE APPROXIMATELY 28 TREES PER AREA FOR A TOTAL OF 112 TREES:
   [37] CEDAR ELM
   [37] LIVE OAK
   [38] LACEY OAK

6. EACH TREE PLANTING AREA/NO DISTURB AREA WILL HAVE AN IRRIGATION SYSTEM.

7. SPECIAL SIGNS TO BE PROVIDED BY THE STATE AND PLACED BY THE CONTRACTOR.

8. TREES SHALL BE PLANTED IN AN ALTERNATING PATTERN IN ORDER TO SIMULATE A NATURAL ENVIRONMENT OR AS DIRECTED BY THE ENGINEER. THERE ARE APPROXIMATELY 28 TREES PER AREA.

9. ITEM 170-5001 IRRIGATION SYSTEM SHOWN ON THE "IRRIGATION LAYOUT" PLAN SHEET IS A GENERAL LAYOUT, THE CONTRACTOR IS RESPONSIBLE FOR LAYING OUT AN IRRIGATION SYSTEM THAT WOULD ALLOW FOR THE REQUIRED TREE LAYOUT SPACING AND REQUIRED WATER RATE, DURING THE ESTABLISHMENT PERIOD FOR THE TREES IN THE DESIGNATED PLANTING AREAS. THE BORE SHALL BE CONSIDERED SUBSIDIARY TO ITEM 170.

10. FOR ADDDITIONAL MITIGATION REQURIED, SEE SHEET(S) 519A.

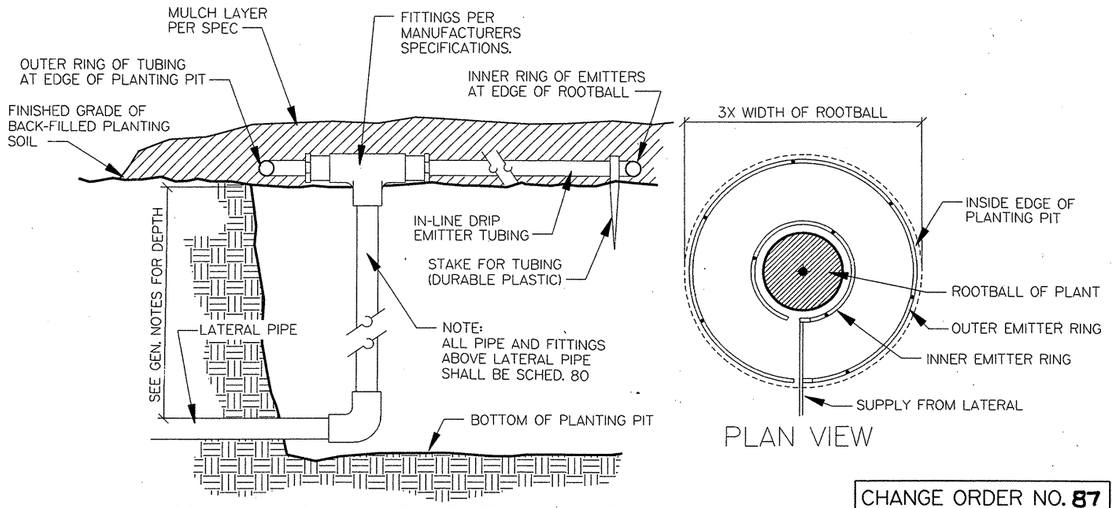
## E TREE PLANTING AND STAKING

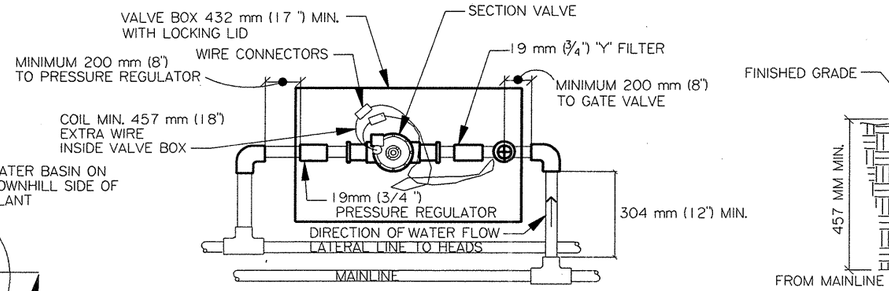
NTS



## F INSTALLATION OF DRIP TUBING AT TREES

NTS

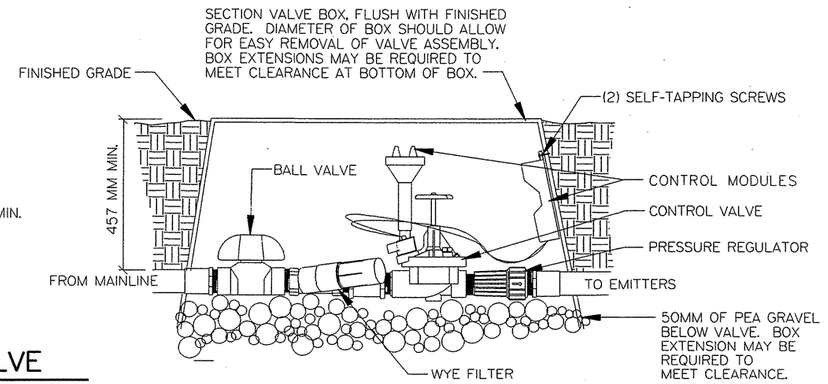
CHANGE ORDER NO. 87



NOTE: SEE PLAN SHEETS FOR PIPE AND VALVE SIZES.

## G PLAN OF PIPING TO SECTION VALVE

NTS

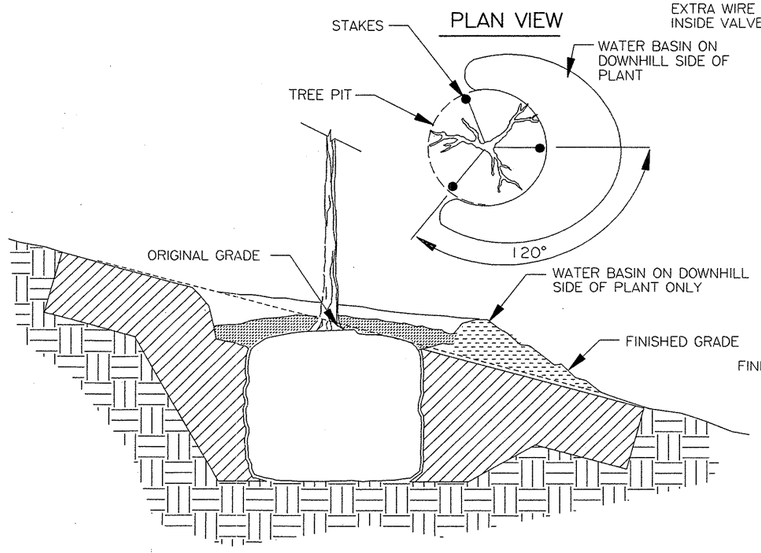


NOTE: VALVES ASSEMBLY SHALL BE LOCATED WITHIN THE DESIGNATED PLANTING BED AREA AS APPROVED BY THE ENGINEER.

NOTE: BANK/GROUP VALVES AS SHOWN ON PLANS AND DETAIL, WIRE DISTANCE FOR CONTROLLERS SHALL NOT EXCEED MANUFACTURERS REQUIREMENTS.

## J REMOTE CONTROL VALVE ASSEMBLY

NTS

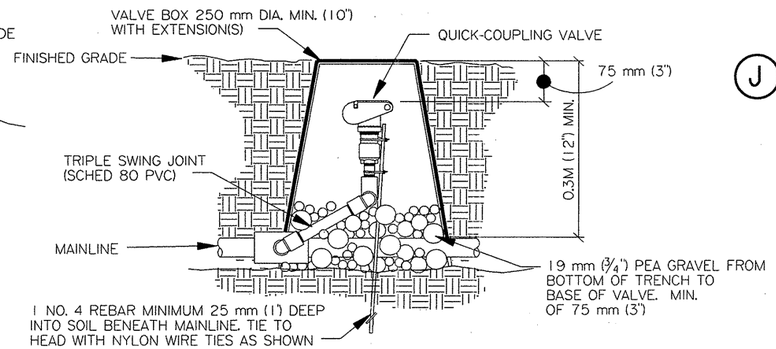


NOTE;

FOR PLANTING INSTRUCTIONS, STAKING, GUYING AND/OR BRACING, SEE APPLICABLE DETAILS AND SPECIFICATIONS.

## H PLANT PIT ON SLOPE

NTS



## I QUICK-COUPLING VALVE

GENERAL NOTES

1. ALL MATERIALS AND CONSTRUCTION PROCEDURES WITHIN THE SCOPE OF THIS CONTRACT SHALL BE APPROVED BY THE SAN ANTONIO WATER SYSTEM (SAWS) AND COMPLY WITH THE FOLLOWING AS APPLICABLE:
   - A. CURRENT TXDOT "STANDARD SPECIFICATIONS FOR CONSTRUCTION OF HIGHWAYS, STREETS AND DRAINAGE."
   - B. CURRENT "SAN ANTONIO WATER SYSTEM STANDARD SPECIFICATIONS FOR CONSTRUCTION."
   - C. CURRENT CITY OF SAN ANTONIO STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION."
2. THE CONTRACTOR IS TO NOTIFY AND MAKE ARRANGEMENTS WITH THE SAWS CONSTRUCTION INSPECTION DIVISION AT 704-7121, AND INVOLVED HOME RESIDENT AND/OR PROPERTY OWNERS 48 HOURS PRIOR TO EXCAVATION.
3. THE CONTRACTOR SHALL AVOID CUTTING ROOTS LARGER THAN ONE INCH IN DIAMETER WHEN EXCAVATING NEAR EXISTING TREES. EXCAVATION IN VICINITY OF TREES SHALL PROCEED WITH CAUTION. THE CONTRACTOR SHALL CONTACT THE CITY ARBORIST AT 207-8053 FOR GUIDANCE. SAWS CONSTRUCTION INSPECTOR SHALL ALSO BE NOTIFIED.
4. THE LOCATION AND DEPTH OF EXISTING UTILITIES, INCLUDING SERVICE LINES, SHOWN IN THESE PLANS ARE APPROXIMATE ONLY. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO LOCATE UTILITY SERVICE LINES 48 HOURS PRIOR TO EXCAVATION AND TO PROTECT THE SAME DURING CONSTRUCTION.

| | |
|---|---|
| SAN ANTONIO WATER SYSTEM | 704-7107/7109 |
| COSA DRAINAGE | 207-8048 |
| COSA TRAFFIC SIGNAL OPERATIONS | 207-7720 |
| TEXAS STATE WIDE ONE CALL LOCATOR | 1-800-545-6005 |

5. THE CONTRACTOR SHALL BE RESPONSIBLE FOR RESTORING TO ITS ORIGINAL OR BETTER CONDITION FROM DAMAGES DONE TO EXISTING FENCES, CURBS, STREETS, DRIVEWAYS, SIDEWALKS, LANDSCAPING AND STRUCTURES.
6. A MINIMUM OF TWO (2) FEET OF COVER IS TO BE MAINTAINED OVER THE SERVICE LINES AT SUBGRADE.
7. ALL ELEVATIONS FOR SAN ANTONIO WATER SYSTEM FACILITY ADJUSTMENTS SHALL BE REFERENCED FROM BENCH MARKS ESTABLISHED FOR THIS PROJECT BY TXDOT AT 615-5892.

# GENERAL NOTES

## GENERAL WATER NOTES

1. *All materials and construction procedures within the scope of this contract shall be approved by the San Antonio Water System (SAWS) and comply with the following as applicable:*

   A. *Current Texas Natural Resource Conversation Commission Design Criteria for Sewerage Systems [31 TAC 317.1, 31 TAC 317.2, 31 TAC 317.3, and 31 TAC 317.13 and 213].*

   B. *Current TXDOT "Standard Specifications for Construction of Highways, Streets and Drainage."*

   C. *Current "San Antonio Water System Standard Specifications for Construction."*
   D. *Current City of San Antonio "Standard Specifications for Public Works Construction."*

2. *The Contractor is to notify and make arrangements with the SAWS Construction Inspection Division at 704-7110 and the involved home residents and/or property owners 48 hours prior to excavation.*

3. *The location and depths of existing utilities, including service laterals, shown on the plans are approximate only. Actual locations and depths must be field verified by the Contractor 48 hours prior to construction and it shall be the Contractor's responsibility to locate utility service lines as required for construction and to protect them during construction.*

4. *The Contractor shall verify the exact location of the underground utilities and drainage structures at least 48 hours prior to construction whether shown on plans or not, and to protect the same during construction.*

| | |
|---|---|
| *San Antonio Water System* | *704-7107 / 7109* |
| *COSA Drainage* | *207-8048* |
| *COSA Traffic Signal Operations* | *207-7720* |
| *Texas State Wide One Call Locator* | *1-800-545-6005* |
| *Bexar Metropolitan Water District* | *354-6536* |

5. *The Contractor shall be responsible for restoring to its original or better condition from damages done to existing fences, curbs, streets, driveways, sidewalks, landscaping and structures.*

6. *The Contractor shall avoid cutting roots larger than one-inch in diameter when excavating near existing trees. Excavation in vicinity of trees shall proceed with caution. The Contractor shall contact the City Arborist at 207-8053 for guidance. SAWS Construction Inspector shall also be notified.*

7. *The Contractor shall not place any waste materials in the 100-year Flood Plain without first obtaining an approved Flood Plain Permit.*

## MISCELLANEOUS

*CABLE LOCATOR*
*CONTRACTOR TO CONTACT TIME WARNER CABLE LOCATOR 48 HOURS PRIOR TO EXCAVATION AT 1-800-545-6005. CONTRACTOR HAS RESPONSIBILITY TO PROTECT AND SUPPORT CABLE TV PLANT DURING CONSTRUCTION.*

*C.P.S. LOCATOR*
*CONTRACTOR SHALL CALL THE TEXAS STATE WIDE ONE LOCATOR NUMBER 1-800-545-6005 FOR LOCATES, 48 HOURS BEFORE BEGINNING ANY EXCAVATION. DUE TO FEDERAL REGULATIONS TITLE 49, PART 192.181, CPS MUST MAINTAIN ACCESS TO GAS VALVES AT ALL TIMES. THE CONTRACTOR MUST PROTECT AND WORK AROUND ANY GAS VALVES THAT ARE IN THE PROJECT AREA.*

*SAN ANTONIO WATER SYSTEM LOCATOR*
*CONTRACTOR TO NOTIFY THE SAN ANTONIO WATER SYSTEM MONITORING DIVISION AT 704-7109 48 HOURS PRIOR TO EXCAVATION.*

*TELEPHONE LOCATOR*
*CONTRACTOR TO CONTACT THE TELEPHONE COMPANY CABLE LOCATOR 48 HOURS PRIOR TO EXCAVATION AT 1-800-545-6005. CONTRACTOR HAS THE RESPONSIBILITY TO PROTECT AND SUPPORT TELEPHONE COMPANY PLANT DURING CONSTRUCTION.*

*CITY OF SAN ANTONIO TRAFFIC SIGNAL LOCATOR*
*CONTRACTOR TO CONTACT CITY OF SAN ANTONIO DEPARTMENT OF PUBLIC WORKS 48 HOURS PRIOR TO EXCAVATION AT 210-207-7765, CONTRACTOR HAS THE RESPONSIBILITY TO PROTECT AND SUPPORT CITY OF SAN ANTONIO SYSTEMS DURING CONSTRUCTION.*

*TXDOT TRAFFIC SIGNAL LOCATOR*
*CONTRACTOR TO CONTACT TXDOT TRAFFIC SIGNAL SHOP 48 HOURS PRIOR TO EXCAVATION AT 210-615-5975. CONTRACTOR HAS THE RESPONSIBILITY TO PROTECT AND SUPPORT TXDOT SYSTEMS DURING CONSTRUCTION.*

*TXDOT ELECTRICAL SYSTEMS LOCATOR*
*CONTRACTOR TO CONTACT TXDOT ELECTRICAL SYSTEMS SHOP 48 HOURS PRIOR TO EXCAVATION AT 210-615-5866. CONTRACTOR HAS THE RESPONSIBILITY TO PROTECT AND SUPPORT TXDOT SYSTEMS DURING CONSTRUCTION.*

*TXDOT TRANSGUIDE SYSTEMS LOCATOR*
*CONTRACTOR TO CONTACT TXDOT TRANSGUIDE SYSTEM SHOP 48 HOURS PRIOR TO EXCAVATION AT 210-731-5131. CONTRACTOR HAS THE RESPONSIBILITY TO PROTECT AND SUPPORT TXDOT SYSTEMS DURING CONSTRUCTION.*

# GENERAL NOTES

## WATER

1. FIRE HYDRANTS SHALL BE MINIMUM 1.5 METER BURY UNLESS OTHERWISE NOTED.
2. ALL WORK SHALL CONFORM WITH CURRENT SAN ANTONIO WATER SYSTEM (SAWS) SPECIFICATIONS.
3. ALL 16" AND 12" DUCTILE IRON (D.I.) AND PVC PIPE SHALL BE CLASS 150.
4. ALL MAINS SHALL BE HYDROSTATICALLY TESTED BY THE CONTRACTOR AS PROVIDED FOR IN THE SPECIAL CONDITIONS. THE ENGINEER AND INSPECTOR SHALL BE PRESENT DURING THE TEST.
5. ALL THRUST BLOCKING SHALL BE INSTALLED IN ACCORDANCE WITH SAWS STANDARD DRAWINGS INCLUDED IN THE PLANS. THERE WILL BE NO SEPARATE PAYMENT MADE FOR THRUST BLOCKING.
6. IT IS THE CONTRACTOR'S RESPOSIBILITY TO SEE THAT ALL SIGNS AND BARRICADES ARE PROPERLY INSTALLED AND MAINTAINED. ALL LOCATIONS AND DISTANCES WILL BE DECIDED UPON IN THE FIELD BY THE CONTRACTOR USING THE TEXAS MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES.
7. BARRICADES, SIGNS AND LIGHTS SHALL BE CONFORM TO THE "TYPICAL SIGN AND BARRICADE STANDARDS" SHEETS ANDTHE TEXAS MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES.
8. TRENCH EXCAVATION PROTECTION SHALL BE ACCOMPLISHED AS REQUIRED BY THE PROVISIONS OF PART 1926, SUBPART "P", EXCAVATION, TRENCHING, AND SHORING OF THE OCCUPATIONAL SAFETY AND HEALTH STANDARDS AND INTERPRETATIONS.
9. THE CONTRACTOR SHALL INSTALL MECHANICAL JOINT (M.J.) FITTINGS ON DUCTILE IRON (D.I.) PIPE. SHOULD OTHER PIPE MATERIALS BE UTILIZED IN ACCORDANCE WITH SAWS STANDARDS SPECIFICATIONS APPROPRIATE "RING-TIGHT" JOINT FITTINGS SHALL BE USED.
10. ALL FACILITIES SHOWN TO ABANDONED SHALL BE REMOVED AS NECESSARY AS PART OF RIGHT-OF-WAY PREPARATION. CONTRACTOR SHALL PLUG ALL FACILITIES LEFT IN PLACE TO INSURE STRUCTURAL STABILITY OF FINAL ROADWAY CONSTRUCTION. (SUBSIDIARY TO RIGHT-OF-WAY PREPARATION)
11. SAWS SHALL MACHINE CHLORINATE NEW WATER MAINS GREATER THAN 750 FEET IN LENGTH. CONTRACTOR SHALL CHLORINATE NEW MAINS HAVING LENGTHS OF 750 FEET OR LESS WITH HTH.

## NOTES:

NSPI DENOTES NO SEPARATE PAY ITEM

ALL TIE-INS ARE TO BE DONE AT NIGHT OR AT A TIME WHICH IS LEAST INCONVENIENT TO THE CUSTOMERS.(NO SEPARATE PAY ITEM)

THE LOCATION AND EXISTENCE OF UNDERGROUND CABLE INDICATED ON THE PLANS ARE TAKEN FROM THE BEST RECORDS AVAILABLE AND ARE NOT GUARANTEED TO BE ACCURATE.

THE CONTRACTOR SHALL BE RESPONSIBLE FOR RESTORING TO ITS ORIGINAL OR BETTER CONDITION FROM DAMAGES DONE TO EXISITING FENCES, CURBS, STREETS, DRIVEWAYS, SIDEWALKS, LANDSCAPING AND STRUCTURES.

THE CONTRACTOR SHALL NOT PLACE ANY WASTE MATERIALS IN THE 100 YEAR FLOOD PLAIN WITHOUT FIRST OBTAINING AN APPROVED FLOOD PLAIN PERMIT.

ALL ELEVATIONS FOR SAN ANTONIO WATER SYSTEM FACILITY ADLUSTMENT SHALL BE REFERENCED FROM BENCHMARKS ESTABLISHED FOR THIS PROJECT BY TXDOT.

### NPDES

1. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE PREPARATION, SUBMITTAL AND APPROVALS OF PERMIT APPLICATIONS AND OTHER SUPPORTING PLANS AND DOCUMENTS REQUIRED BY THE ENVIRONMENTAL PROTECTION AGENCY (EPA) AND THE CITY OF SAN ANTONIO FOR CONSTRUCTION ACTIVITIES AS RELATED TO THE NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM (NPDES).
2. THE CONTRACTOR SHALL BE RESPONSIBLE FOR MANAGING THE SITE DISCHARGE OF EROSION AND OTHER POLLUTANTS DURING THE COURSE OF CONSTRUCTION AND SHALL SUBMIT A NOTICE OF INTENT (NOI) 48 HOURS PRIOR TO CONSTRUCTION TO EPA AND SHALL MAINTAIN THE ATTACHED STORMWATER POLLUTION PREVENTION PLAN AS REQUIRED.
3. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE SITE CONDITIONS DURING CONSTRUCTION AND UNTIL THE SITE IS ACCEPTED FOR MAINTENANCE BY THE OWNER.
4. ALL DOCUMENTS RELATED TO THE STORM DISCHARGE PERMIT AND SITE POLLUTION PREVENTION PLANS SHALL BE KEPT ON FILE AT THE CONSTRUCTION SITE AND SHALL BE AVAILABLE TO THE OWNER FOR REVIEW WHEN REQUESTED.

## TRAFFIC CONTROL NOTES:

1. CONTRACTOR SHALL MAINTAIN OPEN TRAFFIC LANES ON LOOP 1604 AS DIRECTED IN THE LOOP 1604 TRAFFIC CONTROL PLANS AND/OR AS DIRECTED BY THE TxDOT INSPECTOR(S).
2. CONTRACTOR WORK ON LOOP 1604 SHALL BE LIMITED TO THE TIME SPECIFIED IN THE LOOP 1604 TRAFFIC CONTROL PLANS AND/OR AS DIRECTED BY THE TxDOT INSPECTOR(S).
3. TRAFFIC CONTROL FOR WATER MAIN AND SANITARY SEWER MAIN CONSTRUCTION SHALL CONFORM TO TxDOT TRAFFIC CONTROL PLAN STANDARD SHEETS: TCP NOTES - 98, TCP (1-1)-98, TCP (1-2)-98, TCP (1-3)-98, TCP (1-4)-98, TCP (2-1)-98, TCP (2-2)-98, TCP (2-3)-98, TCP (2)-98, TCP (6-1)-98A, TCP (6-2)-98A, TCP (6-3)-98A, TCP (6-4)-98A, TCP (6-5)-98A, TCP (6-6)-98A, TCP (6-7)-98A, TCP (6-8)-98, AND TCP (7-1)-98.
   IF THESE TRAFFIC CONTROL PLAN STANDARD SHEETS ARE NOT CONTAINED WITH THE LOOP 1604 TRAFFIC CONTROL PLANS, THEY MAY BE OBTAINED ON THE TxDOT WEBSITE AT 'www.dot.state.tx.us' UNDER THE HEADINGS OF "Business" & "Plans - TxDOT CAD Standard Plan Files" & Traffic Engineering Standard Plan Sheets (English and Metric)".
   TxDOT BARRICADE STANDARDS BC (1 THRU 9C)-98 SHALL ALSO BE IMPLEMENTED BY THE CONTRACTOR. THESE STANDARDS MAY BE FOUND IN THE LOOP 1604 PLANS OR MAY BE OBTAINED AT THE WEBSITE IDENTIFIED IN THE PRECEDING PARAGRAPH.

## TRENCH EXCAVATION PROTECTION:

CONTRACTOR AND/OR CONTRACTOR'S INDEPENDENTLY RETAINED EMPLOYEE OR STRUCTURAL DESIGN/GEOTECHNICAL/SAFETY/EQUIPMENT CONSULTANT, IF ANY, SHALL REVIEW THESE PLANS AND AVAILABLE GEOTECHNICAL INFORMATION AND THE ANTICIPATED INSTALLATION SITE(S) WITHIN THE PROJECT WORK AREA IN ORDER TO IMPLEMENT CONTRACTOR'S TRENCH EXCAVATION SAFETY PROTECTION SYSTEMS, PROGRAMS, AND/OR PROCEDURES FOR THE PROJECT DESCRIBED IN THE CONTRACT DOCUMENTS. THE CONTRACTOR'S IMPLEMENTATION OF THESE SYSTEMS, PROGRAMS, AND/OR PROCEDURES SHALL PROVIDE FOR ADEQUATE TRENCH EXCAVATION SAFETY PROTECTION THAT COMPLY WITH AS A MINIMUM, OSHA STANDARDS FOR TRENCH EXCAVATIONS. SPECIFICALLY, CONTRACTOR AND/OR CONTRACTOR'S INDEPENDENTLY RETAINED EMPLOYEE OR SAFETY CONSULTANT SHALL IMPLEMENT A TRENCH SAFETY PROGRAM IN ACCORDANCE WITH OSHA STANDARDS GOVERNING THE PRESENCE AND ACTIVITIES OF INDIVIDUALS WORKING IN AND AROUND TRENCH EXCAVATION.

## UTILITIES STATEMENT

THE UNDERGROUND UTILITIES SHOWN HAVE BEEN LOCATED FROM FIELD SURVEY INFORMATION AND/OR EXISTING DRAWINGS. THE ENGINEER MAKES NO GUARANTEE THAT THE UNDERGROUND UTILITIES COMPRISE ALL SUCH UTILITIES IN THE AREA, EITHER IN SERVICE OR ABANDON. THE ENGINEER FURTHER DOES NOT WARRANT THAT THE UNDERGROUND UTILITIES SHOWN ARE IN THE EXACT LOCATION INDICATED. THE ENGINEER HAS NOT PHYSICALLY LOCATED THE UNDERGROUND UTILITIES.

OTHER NOTES:

1) ALL WATER MAIN BEING INSTALLED IN LOOP 1604 RIGHT-OF-WAY SHALL BE INSTALLED IN ACCORDANCE WITH THE PHASING TRAFFIC CONTROL PLANS PREPARED BY THE TEXAS DEPARTMENT OF TRANSPORTATION FOR THE LOOP 1604 PROJECT.
2) CONTRACTOR SHALL VERIFY LOCATION OF ALL EXISTING UTILITIES PRIOR TO BEGINNING CONSTRUCTION.
3) ALL HORIZONTAL AND VERTICAL BENDS, PI's AND PVI's SHALL HAVE THRUST BLOCKING. THRUST BLOCKING SUBSIDIARY TO PIPE INSTALLATION.
4) PIPE WILL HAVE RESTRAINED JOINTS AS SHOWN ON PLANS RESTAINED JOINTS SUBSIDIARY TO PIPE INSTALLATION.
5) ABANDONMENT AND REMOVAL OF EXISTING WATER MAINS SHALL BE NO SEPARATE PAY ITEM (NSPI).
6) EXCESS EXCAVATED MATERIAL SHALL BE HAULED OFF SITE. THIS WORK SHALL BE SUBSIDIARY TO COST OF PIPE.
7) IF CONTRACTOR DAMAGES NEW VEGETATION, SEED, TOP SOIL OR OTHER IMPROVEMENTS INSTALLED BY TXDOT, CONTRACTOR SHALL REPAIR OR REPLACE DAMAGED GOODS TO SATISFACTION OF TXDOT AT CONTRACTOR'S EXPENSE.
8) EXISTING FIRE HYDRANTS ON MAINS TO BE ABANDONED WILL BE REMOVED AND RETURNED TO SAWS (NSPI).
9) 6" VALVE TO FIRE HYDRANT IS SUBSIDIARY TO FIRE HYDRANT INSTALLATION.
10) ALL WATER MAINS SHALL BE 1.5METER MINIMUM BURY FROM FINISHED GRADE UNLESS OTHERWISE NOTED.
11) CONTRACTOR SHALL BE RESPONSIBLE FOR OBTAINING ANY NECESSARY TEMPORARY CONSTRUCTION EASEMENTS
12) CONTRACTOR SHALL MAINTAIN ACCESS TO DRIVEWAYS AND ROADWAYS AT ALL TIMES AS DIRECTED BY TXDOT. TRAFFIC CONTROL NECESSARY FOR WATER MAIN INSTALLATION IS NO SEPARATE PAY ITEM.
13) RETAINER GLANDS ARE SUBSIDIARY TO COST OF FITTINGS.
14) COST OF INSTALLING WRAP, BANDS, CLEATS, ETC. AROUND WATER MAIN WITHIN CASING IS SUBSIDIARY TO THE COST OF THE WATER PIPE.
15) TIE-INS WILL BE DONE DURING OFF PEAK HOURS AS DIRECTED BY SAWS. DUAL TIE-INS WILL BE DONE SIMULTANEOUSLY UNLESS OTHERWISE DIRECTED BY SAWS.
16) ROCK EXCAVATION IS SUBSIDIARY TO THE COST OF WATER PIPE.
17) CONTRACTOR SHALL BE RESPONSIBLE FOR IDENTIFYING THE EXACT LOCATION OF EXISTING UTILITIES. UTILITIES SHOWN ON THE PLANS ARE NOT GUARANTEED TO ACCURATELY REFLECT FIELD CONDITIONS.
18) UNLESS OTHERWISE NOTED, CONTRACTOR WILL REMOVE ABANDONED WATER MAIN AS NEEDED TO CONSTRUCT NEW MAINS (NSPI).

NOTE:

ALL DIMENSIONS ARE IN METERS UNLESS OTHERWISE NOTED.

NOTE:

1. THE EXISTENCE AND LOCATION OF UNDERGROUND CABLE INDICATED ON THE PLANS ARE TAKEN FROM THE BEST RECORDS AVAILABLE AND ARE NOT GUARANTEED TO BE ACCURATE. CONTRACTOR TO CONTACT THE TELEPHONE COMPANY CABLE LOCATOR 48 HOURS PRIOR TO EXCAVATION AT 1-800-545-6005. CONTRACTOR HAS THE RESPONSIBILITY TO PROTECT AND SUPPORT TELEPHONE COMPANY PLANT DURING CONSTRUCTION.

2. DUE TO FEDERAL REGULATIONS TITLE 49, PART 192.181, CPS MUST MAINTAIN ACCESS TO GAS VALVES AT ALL TIMES. THE CONTRACTOR MUST PROTECT AND WORK AROUND ANY GAS VALVES THAT ARE IN THE PROJECT AREA. THE CONTRACTOR SHALL NOTIFY CPS LOCATOR AT 1-800-545-6005, 48 HOURS BEFORE BEGINNING ANY EXCAVATION.

3. CONTRACTOR AND/OR CONTRACTOR'S INDEPENDENTLY RETAINED EMPLOYEE OR STRUCTURAL DESIGN/CONTRACTOR AND GEOTECHNICAL/SAFETY/EQUIPMENT CONSULTANT, IF ANY, SHALL REVIEW THESE PLANS AND ANY AVAILABLE GEOTECHNICAL INFORMATION AND THE ANTICIPATED INSTALLATION SITES WITHIN THE PROJECT WORK AREA IN ORDER TO DEVELOP THE CONTRACTOR'S PLANS TO IMPLEMENT THE PROJECT DESCRIBED IN THE CONTRACT DOCUMENTS. THE CONTRACTOR'S PLANS SHALL PROVIDE FOR ADEQUATE TRENCH SAFETY SYSTEMS THAT COMPLY WITH AS A MINIMUM O.S.H.A. STANDARDS FOR TRENCH EXCAVATIONS. SPECIFICALLY, CONTRACTOR AND/OR CONTRACTOR'S INDEPENDENTLY RETAINED EMPLOYEE OR SAFETY CONSULTANT SHALL DEVELOP AND IMPLEMENT A TRENCH SAFETY PROGRAM IN ACCORDANCE WITH O.S.H.A. STANDARDS GOVERNING THE PRESENCE AND ACTIVITIES OF INDIVIDUALS WORKING IN AND AROUND TRENCH EXCAVATION.

NOTE:
THESE PLANS ARE FOR WATER WORKS CONSTRUCTION ONLY. PROPOSED DRAINAGE, ROADWAY, SIDEWALK, CURB AND DRIVEWAY CONSTRUCTION IS SHOWN FOR INFORMATION PURPOSES ONLY.

5. CHANGE ORDER #1 REVISIONS

CHANGED ALIGNMENT FROM 1.5m TO 3.65m.
CHANGED DUCTILE IRON FITTINGS FROM 5,416Kg TO 11,884.3Kg
ADDED 28.3m of 300mm D.I. PIPE
ADDED (1) 300mm TIE-IN
CHANGED CUT & REPL ASPH PAV W/150mm ASPH TRT B FROM 20.6m² TO 39.4m²
CHANGED TOP OF PIPE ELEVATIONS FROM 275 TO 273(925mm) & 274.0(300mm)
CHANGED 925mm PIPE FROM 75.3m TO 74.7m.
CHANGED TRENCH PROTECTION METERS FROM 75.3m TO 105.8m.
ADDED (1) 300mm GATE VALVE.
ADDED (1) 50mm TEMP. BLOW-OFF
CHANGED HYDROSTATIC PRESSURE TEST FROM 1 EA TO 2 EA.
CHANGED CUT & REPL CONC SDWLK, DRWY, ETC. FROM .52m² to .77m²

= CONTRACTOR'S INFORMATION: 32.9m of 925mm (DI) IN 1375mm CASING
== TOTAL IS FOR C.O. # 1 AND # 17

NOTES:

1. THE EXISTENCE AND LOCATION OF UNDERGROUND CABLE INDICATED ON THE PLANS ARE TAKEN FROM THE BEST RECORDS AVAILABLE AND ARE NOT GUARANTEED TO BE ACCURATE. CONTRACTOR TO CONTACT THE TELEPHONE COMPANY CABLE LOCATOR 48 HOURS PRIOR TO EXCAVATION AT 1-800-545-6005. CONTRACTOR HAS THE RESPONSIBILITY TO PROTECT AND SUPPORT TELEPHONE COMPANY PLANT DURING CONSTRUCTION.
2. DUE TO FEDERAL REGULATIONS TITLE 49, PART 192.181, CPS MUST MAINTAIN ACCESS TO GAS VALVES AT ALL TIMES. THE CONTRACTOR MUST PROTECT AND WORK AROUND ANY GAS VALVES THAT ARE IN THE PROJECT AREA. THE CONTRACTOR SHALL NOTIFY CPS LOCATOR AT 1-800-545-6005, 48 HOURS BEFORE BEGINNING ANY EXCAVATION.
3. CONTRACTOR AND/OR CONTRACTOR'S INDEPENDENTLY RETAINED EMPLOYEE OR STRUCTURAL DESIGN/CONTRACTOR AND GEOTECHNICAL/SAFETY/EQUIPMENT CONSULTANT, IF ANY, SHALL REVIEW THESE PLANS AND ANY AVAILABLE GEOTECHNICAL INFORMATION AND THE ANTICIPATED INSTALLATION SITES WITHIN THE PROJECT WORK AREA IN ORDER TO DEVELOP THE CONTRACTOR'S PLANS TO IMPLEMENT THE PROJECT DESCRIBED IN THE CONTRACT DOCUMENTS. THE CONTRACTOR'S PLANS SHALL PROVIDE FOR ADEQUATE TRENCH SAFETY SYSTEMS THAT COMPLY WITH AS A MINIMUM O.S.H.A. STANDARDS FOR TRENCH EXCAVATIONS. SPECIFICALLY, CONTRACTOR AND/OR CONTRACTOR'S INDEPENDENTLY RETAINED EMPLOYEE OR SAFETY CONSULTANT SHALL DEVELOP AND IMPLEMENT A TRENCH SAFETY PROGRAM IN ACCORDANCE WITH O.S.H.A. STANDARDS GOVERNING THE PRESENCE AND ACTIVITIES OF INDIVIDUALS WORKING IN AND AROUND TRENCH EXCAVATION.
4. ALL DIMENSIONS ARE IN METERS UNLESS OTHERWISE NOTED.
5. ALL 600mm and 925mm D.I. PIPE WILL BE 1.50m BURY UNLESS OTHERWISE NOTED.
6. CONTRACTOR IS RESPONSIBLE FOR MAINTAINING AND PROTECTING THE INTEGRITY OF THE POWER POLES DURING CONSTRUCTION

2. DUE TO FEDERAL REGULATIONS TITLE 49, PART 192.181, CPS MUST MAINTAIN ACCESS TO GAS VALVES AT ALL TIMES. THE CONTRACTOR MUST PROTECT AND WORK AROUND ANY GAS VALVES THAT ARE IN THE PROJECT AREA. THE CONTRACTOR SHALL NOTIFY CPS LOCATOR AT 1-800-545-6005, 48 HOURS BEFORE BEGINNING ANY EXCAVATION.

3. CONTRACTOR AND/OR CONTRACTOR'S INDEPENDENTLY RETAINED EMPLOYEE OR STRUCTURAL DESIGN/CONTRACTOR AND GEOTECHNICAL/SAFETY/EQUIPMENT CONSULTANT, IF ANY, SHALL REVIEW THESE PLANS AND ANY AVAILABLE GEOTECHNICAL INFORMATION AND THE ANTICIPATED INSTALLATION SITES WITHIN THE PROJECT WORK AREA IN ORDER TO DEVELOP THE CONTRACTOR'S PLANS TO IMPLEMENT THE PROJECT DESCRIBED IN THE CONTRACT DOCUMENTS. THE CONTRACTOR'S PLANS SHALL PROVIDE FOR ADEQUATE TRENCH SAFETY SYSTEMS THAT COMPLY WITH AS A MINIMUM O.S.H.A. STANDARDS FOR TRENCH EXCAVATIONS. SPECIFICALLY, CONTRACTOR AND/OR CONTRACTOR'S INDEPENDENTLY RETAINED EMPLOYEE OR SAFETY CONSULTANT SHALL DEVELOP AND IMPLEMENT A TRENCH SAFETY PROGRAM IN ACCORDANCE WITH O.S.H.A. STANDARDS GOVERNING THE PRESENCE AND ACTIVITIES OF INDIVIDUALS WORKING IN AND AROUND TRENCH EXCAVATION.

| 5324-5038 | DUCTILE IRON FITTINGS | 1,560.8 | KG |
| 5324-5039 | HYDROSTATIC PRESSURE TEST | 1 | EA |
| 5324-5054 | TIE-IN (MAIN) (400mm) | 2 | EA |

QUANTITIES THIS SHEET
CSJ 2452-01-037

NOTE:

1. THE EXISTENCE AND LOCATION OF UNDERGROUND CABLE INDICATED ON THE PLANS ARE TAKEN FROM THE BEST RECORDS AVAILABLE AND ARE NOT GUARANTEED TO BE ACCURATE. CONTRACTOR TO CONTACT THE TELEPHONE COMPANY CABLE LOCATOR 48 HOURS PRIOR TO EXCAVATION AT 1-800-545-6005. CONTRACTOR HAS THE RESPONSIBILITY TO PROTECT AND SUPPORT TELEPHONE COMPANY PLANT DURING CONSTRUCTION.

2. DUE TO FEDERAL REGULATIONS TITLE 49, PART 192.181, CPS MUST MAINTAIN ACCESS TO GAS VALVES AT ALL TIMES. THE CONTRACTOR MUST PROTECT AND WORK AROUND ANY GAS VALVES THAT ARE IN THE PROJECT AREA. THE CONTRACTOR SHALL NOTIFY CPS LOCATOR AT 1-800-545-6005, 48 HOURS BEFORE BEGINNING ANY EXCAVATION.

3. CONTRACTOR AND/OR CONTRACTOR'S INDEPENDENTLY RETAINED EMPLOYEE OR STRUCTURAL DESIGN/CONTRACTOR AND GEOTECHNICAL/SAFETY/EQUIPMENT CONSULTANT, IF ANY, SHALL REVIEW THESE PLANS AND ANY AVAILABLE GEOTECHNICAL INFORMATION AND THE ANTICIPATED INSTALLATION SITES WITHIN THE PROJECT WORK AREA IN ORDER TO DEVELOP THE CONTRACTOR'S PLANS TO IMPLEMENT THE PROJECT DESCRIBED IN THE CONTRACT DOCUMENTS. THE CONTRACTOR'S PLANS SHALL PROVIDE FOR ADEQUATE TRENCH SAFETY SYSTEMS THAT COMPLY WITH AS A MINIMUM O.S.H.A. STANDARDS FOR TRENCH EXCAVATIONS. SPECIFICALLY, CONTRACTOR AND/OR CONTRACTOR'S INDEPENDENTLY RETAINED EMPLOYEE OR SAFETY CONSULTANT SHALL DEVELOP AND IMPLEMENT A TRENCH SAFETY PROGRAM IN ACCORDANCE WITH O.S.H.A. STANDARDS GOVERNING THE PRESENCE AND ACTIVITIES OF INDIVIDUALS WORKING IN AND AROUND TRENCH EXCAVATION.

NOTE:
THESE PLANS ARE FOR WATER WORKS CONSTRUCTION ONLY. PROPOSED DRAINAGE, ROADWAY, SIDEWALK, CURB AND DRIVEWAY CONSTRUCTION IS SHOWN FOR INFORMATION PURPOSES ONLY.

NOTE:
ALL DIMENSIONS ARE IN METERS UNLESS OTHERWISE NOTED

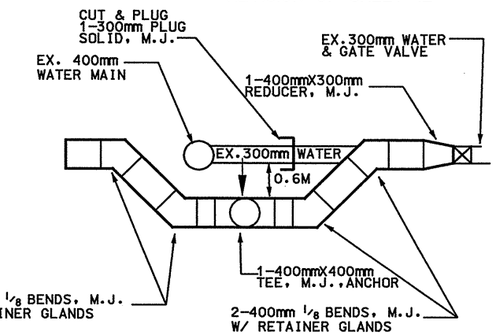
REVISION OF SHEET 12



300mm WATER MAIN TIE-IN DETAIL
N.T.S.

TIE-IN NOTES:

1. TIE-IN TO BE DONE DURING OFF PEAK HOURS. CONTRACTOR TO COORDINATE TIE-IN WITH SAWS.
2. REMOVE EXISTING 300mm WATER MAIN AS NEEDED TO MAKE TIE-IN (NSPI)

NOTES:

1. ALL DIMENSIONS ARE IN METERS UNLESS OTHERWISE NOTED.
2. THE EXISTENCE AND LOCATION OF UNDERGROUND CABLE INDICATED ON THE PLANS ARE TAKEN FROM THE BEST RECORDS AVAILABLE AND ARE NOT GUARANTEED TO BE ACCURATE. CONTRACTOR TO CONTACT THE TELEPHONE COMPANY CABLE LOCATOR 48 HOURS PRIOR TO EXCAVATION AT 1-800-545-6005. CONTRACTOR HAS THE RESPONSIBILITY TO PROTECT AND SUPPORT TELEPHONE COMPANY PLANT DURING CONSTRUCTION.
3. DUE TO FEDERAL REGULATIONS TITLE 49, PART 192.181, CPS MUST MAINTAIN ACCESS TO GAS VALVES AT ALL TIMES. THE CONTRACTOR MUST PROTECT AND WORK AROUND ANY GAS VALVES THAT ARE IN THE PROJECT AREA. THE CONTRACTOR SHALL NOTIFY CPS LOCATOR AT 1-800-545-6005, 48 HOURS BEFORE BEGINNING ANY EXCAVATION.
4. CONTRACTOR AND/OR CONTRACTOR'S INDEPENDENTLY RETAINED EMPLOYEE OR STRUCTURAL DESIGN/CONTRACTOR AND GEOTECHNICAL/SAFETY/EQUIPMENT CONSULTANT, IF ANY, SHALL REVIEW THESE PLANS AND ANY AVAILABLE GEOTECHNICAL INFORMATION AND THE ANTICIPATED INSTALLATION SITES WITHIN THE PROJECT WORK AREA IN ORDER TO DEVELOP THE CONTRACTOR'S PLANS TO IMPLEMENT THE PROJECT DESCRIBED IN THE CONTRACT DOCUMENTS. THE CONTRACTOR'S PLANS SHALL PROVIDE FOR ADEQUATE TRENCH SAFETY SYSTEMS THAT COMPLY WITH AS A MINIMUM O.S.H.A. STANDARDS FOR TRENCH EXCAVATIONS. SPECIFICALLY, CONTRACTOR AND/OR CONTRACTOR'S INDEPENDENTLY RETAINED EMPLOYEE OR SAFETY CONSULTANT SHALL DEVELOP AND IMPLEMENT A TRENCH SAFETY PROGRAM IN ACCORDANCE WITH O.S.H.A. STANDARDS GOVERNING THE PRESENCE AND ACTIVITIES OF INDIVIDUALS WORKING IN AND AROUND TRENCH EXCAVATION.
5. ALL PIPE SHALL HAVE 1.5M MINIMUM BURY FROM FINISHED GRADE, UNLESS OTHERWISE NOTED.
6. CONTRACTOR SHALL PROVIDE ACCESS TO & FROM REED ROAD. TRAFFIC CONTROL REQUIRED BY TXDOT IS NO SEPARATE PAY ITEM. TRAFFIC CONTROL SHALL BE PROVIDED AS DIRECTED BY TXDOT.
7. CONTRACTOR SHALL REFER TO GENERAL NOTES FOR THIS CHANGE ORDER.

CONSTRUCTION SEQUENCE NOTES

#1) CONTRACTOR TO INSTALL REED ROAD CROSSING AND MAKE TIE-IN TO 300mm MAIN PARALLEL TO REED ROAD AND TIE-IN TO 400mm MAIN CROSSING FM LOOP 1604 PRIOR TO CONSTRUCTING 400mm MAIN PARALLEL TO FM LOOP 1604. CONTRACTOR TO PROVIDE GATE VALVE, TWO JOINTS OF 400mm DI PIPE, AND TEMPORARY CAP (400mm) FOR EXTENSION OF 400mm DI PIPE PARALLEL TO FM LOOP 1604. CONTRACTOR TO BRING REED ROAD CROSSING INTO SERVICE ONCE TIE-IN TO 300mm MAIN ON REED ROAD AND TIE-IN TO 400mm WATER MAIN CROSSING FM LOOP 1604 IS COMPLETE.

#2) CONTRACTOR TO REMOVE 400mm TEMPORARY CAP FROM JOINT OF 400mm DI PIPE PARALLEL TO FM LOOP 1604 (SEE CONSTRUCTION SEQUENCE NOTES #1). CONSTRUCT 400mm DI MAIN PARALLEL TO FM LOOP 1604. NO SEPARATE PAY ITEM FOR REMOVING TEMPORARY CAP. CONNECTING DI PIPE PARALLEL TO FM LOOP 1604 TO DI PIPE PARALLEL TO FM LOOP 1604 CITED IN CONSTRUCTION SEQUENCE NOTES #1 SHALL BE NO SEPARATE PAY ITEM.

△ CHANGE ORDER NO.

NEW SHEET,
WATER ADDENDUM

NOTE:

1. ALL DIMENSIONS ARE IN METERS UNLESS OTHERWISE NOTED

2. THE EXISTENCE AND LOCATION OF UNDERGROUND CABLE INDICATED ON THE PLANS ARE TAKEN FROM THE BEST RECORDS AVAILABLE AND ARE NOT GUARANTEED TO BE ACCURATE. CONTRACTOR TO CONTACT THE TELEPHONE COMPANY CABLE LOCATOR 48 HOURS PRIOR TO EXCAVATION AT 1-800-545-6005. CONTRACTOR HAS THE RESPONSIBILITY TO PROTECT AND SUPPORT TELEPHONE COMPANY PLANT DURING CONSTRUCTION.

3. DUE TO FEDERAL REGULATIONS TITLE 49, PART 192.181, CPS MUST MAINTAIN ACCESS TO GAS VALVES AT ALL TIMES. THE CONTRACTOR MUST PROTECT AND WORK AROUND ANY GAS VALVES THAT ARE IN THE PROJECT AREA. THE CONTRACTOR SHALL NOTIFY CPS LOCATOR AT 1-800-545-6005, 48 HOURS BEFORE BEGINNING ANY EXCAVATION.

4. CONTRACTOR AND/OR CONTRACTOR'S INDEPENDENTLY RETAINED EMPLOYEE OR STRUCTURAL DESIGN/CONTRACTOR AND GEOTECHNICAL/SAFETY/EQUIPMENT CONSULTANT, IF ANY, SHALL REVIEW THESE PLANS AND ANY AVAILABLE GEOTECHNICAL INFORMATION AND THE ANTICIPATED INSTALLATION SITES WITHIN THE PROJECT WORK AREA IN ORDER TO DEVELOP THE CONTRACTOR'S PLANS TO IMPLEMENT THE PROJECT DESCRIBED IN THE CONTRACT DOCUMENTS. THE CONTRACTOR'S PLANS SHALL PROVIDE FOR ADEQUATE TRENCH SAFETY SYSTEMS THAT COMPLY WITH AS A MINIMUM O.S.H.A. STANDARDS FOR TRENCH EXCAVATIONS. SPECIFICALLY, CONTRACTOR AND/OR CONTRACTOR'S INDEPENDENTLY RETAINED EMPLOYEE OR SAFETY CONSULTANT SHALL DEVELOP AND IMPLEMENT A TRENCH SAFETY PROGRAM IN ACCORDANCE WITH O.S.H.A. STANDARDS GOVERNING THE PRESENCE AND ACTIVITIES OF INDIVIDUALS WORKING IN AND AROUND TRENCH EXCAVATION.

5. ALL PIPE SHALL BE 1.5m MINIMUM BURY FROM FINISHED GRADE UNLESS OTHERWISE NOTED.

6. CONTRACTOR SHALL REFER TO GENERAL NOTES FOR THIS CHANGE ORDER.

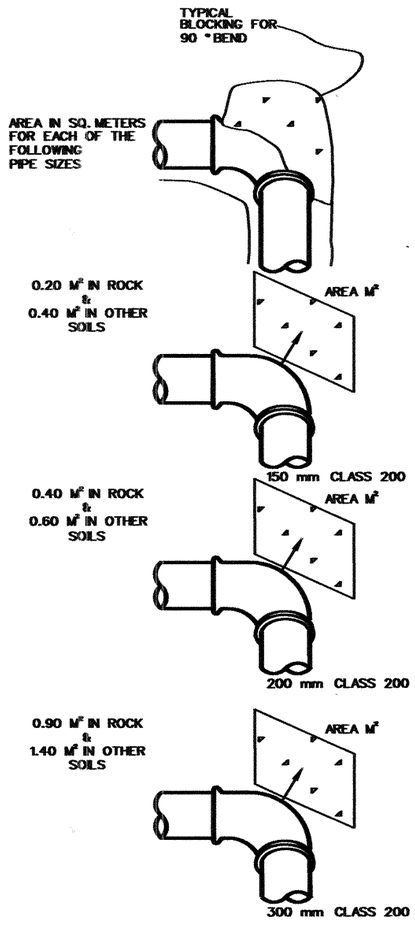
|---|---|---|---|---|
| | | DD-839-01 | | |



BLOCKING AREA FOR 1380 KPa TESTS & 1210 KPa WORKING PRESSURES

## THRUST BLOCKING DESIGN

ON BASIS OF 1380 KPa WATER PRESSURE USED FOR TESTS, THE BLOCKING REQUIRED FOR TWO TYPES OF SOILS AS NOTED BELOW IN ONE CASE, A SOIL PRESSURE OF 34475 KPa IS USED FOR ROCK EXCAVATION AND FOR SOILS OTHER THAN ROCK. A 20685 KPa BEARING SOIL PRESSURE IS USED. THE DISTRIBUTION ON SYSTEM IS DESIGNED TO OPERATE WITH A MAXIMUM WATER PRESSURE OF 1210 KPa AND CALCULATIONS APPLY TO A.C. PIPE CLASS 200 AND DUCTILE IRON PIPE CLASS 2. P.V.C. PIPE CLASS 200 (SDR 13.5)

SQUARE METERS OF BLOCKING REQUIRED FOR ROCK EXCAVATION

| SIZE PIPE | TEES & DEAD ENDS | 90° BEND | 45° BEND | 22½° BEND |
|---|---|---|---|---|
| 150 mm | 0.20 | 0.20 | 0.10 | 0.10 |
| 200 mm | 0.30 | 0.40 | 0.20 | 0.10 |
| 300 mm | 0.60 | 0.90 | 0.50 | 0.20 |
| 400 mm | 1.10 | 1.50 | 0.80 | 0.40 |

SQUARE METERS OF BLOCKING REQUIRED FOR OTHER THAN ROCK EXCAVATION

| SIZE PIPE | TEES & DEAD ENDS | 90° BEND | 45° BEND | 22½° BEND |
|---|---|---|---|---|
| 150 mm | 0.30 | 0.40 | 0.20 | 0.10 |
| 200 mm | 0.40 | 0.60 | 0.40 | 0.20 |
| 300 mm | 1.0 | 1.40 | 0.80 | 0.40 |
| 400 mm | 1.80 | 2.40 | 1.40 | 0.70 |

ANCHORAGE AND BLOCKING SHALL BE PROVIDED IN MANNER AS INDICATED BY STD. DWGS. DD-03-00 AND DD-03-01 IN ACCORDANCE WITH SECTION 5.4 ANCHORING BLOCKING STANDARD SPECIFICATIONS FOR WATER WORKS CONSTRUCTION EXCEPT THAT 13790 KPa CONCRETE SHALL BE USED IN LIEU OF 10345 KPa CONCRETE.
TRANSIT 13790 KPa CONCRETE MIX SHALL BE USED; HOWEVER FOR SMALL VOLUME REQUIREMENTS CONCRETE MIXED AT JOB SITE WILL BE ACCEPTABLE ONLY IF A CONCRETE MIXER IS USED. ALL AGGREGATE SHALL BE CLEAN AND THE FIELD MIX SHALL BE IN THE RATIO OF 1:3:4 AND CONTAIN NOT LESS THAN 6 SACKS OF CEMENT PER CU. METER.

# GENERAL NOTES

SANITARY SEWER SYSTEM

1. All materials and construction procedures within the scope of this contract shall be approved by the San Antonio Water System (SAWS) and comply with the following as applicable:

   A. Texas Natural Resource Conservation Commission's Design criteria for Sewerage Systems [31 TAC 317.1, 31 TAC 317.2, 31 TAC 317.3 and 31 TAC 317.13 and 31 TAC 317.13 and 213].

   B. Current TXDOT "Standard Specifications for Construction of Highways, Streets and Drainage." Construction inspection Division, at 704-7110, and involved home resident and/or property owners, 48 hours prior to excavation.

   C. Current "San Antonio Water System Standard Specifications for Construction."

   D. Current "City of San Antonio Standard Specifications for Public Works Construction".

2. The Contractor is to notify and make arrangements with the San Antonio Water System.

3. The locations and depths of existing utilities, to include service laterals, shown in these plans are approximate only. Actual locations and depths must be field verified by the contractor 48 hours prior to construction and it shall be the Contractor's responsibility to locate utility service lines as required for construction and to protect them during construction.

4. The contractor shall verify the exact location of underground utilities and drainage structures at least 48 hours prior to construction whether shown on plans or not, and to protect the same during construction.

| | |
|---|---|
| San Antonio Water System | 704-7107/7109 |
| COSA Drainage | 207-8048 |
| COSA Traffic Signal Operations | 207-7720 |
| Texas State Wide Signal One Call Locator | 1-800-545-6005 |

6. The Contractor shall avoid cutting roots larger than one inch in diameter when excavating near existing trees. Excavation in vicinity of trees shall proceed with caution. The Contractor shall contact the City Arborist at 207-8053 for guidance. SAWS Construction Inspector shall also be notified.

7. The Contractor shall not place any waste materials in the 100-year Flood Plain without first obtaining an approved Flood Plain Permit.

GENERAL SEWER NOTES

1. The Contractor is responsible to ensure that no overflows or spillage of sewage occurs. Should this occur, the Contractor shall:

   A. Identify the source of the spill and attempt to eliminate any additional spillage Notify Construction Inspections.

   B. Contain the spill in place and contamination of streams

   C. Clean up the spill and dispose of contaminated materials.

   D. Disinfect the area of the spill with a mixture of HTH chlorine and water.

   E. Identify and train personnel responsible for spillage prevention and control.

   No separate measurement or payment shall be made for this work. All work shall be done according to guidelines set by the Texas Natural Resource Conservation Commission (TNRCC) and the San Antonio Water System.

2. Service Lateral Connections:

   A. The exact location and elevation of all existing service laterals and manholes shall be field verified by the Contractor. (NSPI)

   B. A minimum of 3 feet of cover is to be maintained over the sanitary sewer laterals at subgrade.

   C. All sewer lateral services for future connections as identified on plan and profiles, shall be capped and sealed.

   D. The contractor shall reconnect existing service laterals into new main. (NSPI)

   E. Laterals shall be constructed to serve all existing houses and vacant lots.

# GENERAL NOTES

## GENERAL WATER NOTES

1. All materials and construction procedures within the scope of this project shall be approved by the San Antonio Water System (SAWS) and comply with the following as applicable:

A. Current "San Antonio Water System Standard Specifications for Construction"
B. Current "San Antonio Water System Utility Service Regulations"
C. Current City of San Antonio "Standard Specifications for Public Works Construction"
D. Current TxDOT "Standard Specifications for Construction of Highways, Streets, and Drainage"
E. Current City of San Antonio "Right-of-Way Ordinance and Criteria Manual"

2. The Contractor shall not proceed with any pipe installation work until they obtain a copy of the approved General Construction Permit from Consultant and notify SAWS Construction Inspection Division at 704-7110 with at least 3 working days (72 hours) notice.

3. The locations and depths of existing utilities, including service laterals, and drainage structures shown on the plans are approximate only. The Contractor shall verify the exact location and depths of underground utilities at least 48 hours prior to construction whether shown on plans or not, and to protect the same during construction.

| | |
|---|---|
| San Antonio Water System | 704-7107/7109 |
| COSA Drainage | 207-2800 |
| City Sidewalk and Trenching Division | 821-3240 |
| COSA Traffic Signal Operations | 207-7765 |
| Texas State Wide One Call Locator: | 1-800-545-6005 |
| City Public Service | " |
| Southwestern Bell | " |
| Time Warner Cable | " |
| Valero Energy Co. | " |
| Bexar Metropolitan Water District | 354-6536 |

4. No meter boxes to be set in driveways. Any meter boxes set in driveways will be relocated at Contractor's and/or developer's expense.

5. The Contractor shall be responsible for restoring to its original or better condition from damage done to existing fences, curbs, streets, driveways, landscaping and structures.

6. The Contractor shall avoid cutting roots larger than one inch in diameter when excavating near existing trees. Excavation in vicinity of trees shall proceed with caution. The Contractor shall contact the City Arborist at 207-8053 and the SAWS construction inspector for guidance.

SUPPLEMENTARY

7. No extra payment shall be allowed for work called for on the plans but not included on the bid schedule. This incidental work will be required and shall be included under the pay item to which it relates.

8. The Developer dedicates the water mains upon completion by the Developer and acceptance by the San Antonio Water System. The San Antonio Water System will own and maintain said water mains which are located within this particular subdivision. (As applicable.)

9. Contractor and/or Contractor's independently retained employee or structural design/geotechnical/safety/equipment consultant, if any, shall review these plans and available geotechnical information and the anticipated installation site(s) within the project work area in order to implement Contractor's trench excavation safety protection systems, programs and/or procedures. The Contractor's implementation of the systems, programs and/or procedures shall provide for adequate trench excavation safety protection that complies with as a minimum, OSHA Standards for trench excavations. Specifically, Contractor and/or Contractor's independently retained employee or safety consultant shall implement a trench safety program in accordance with OSHA Standards governing the presence and activities of individuals working in and around trench excavations.

10. WORK COMPLETED BY THE CONTRACTOR WHICH HAS NOT RECEIVED A WORK ORDER OR THE NOTICE TO PROCEED WITH THE SAN ANTONIO WATER SYSTEM CONSTRUCTION INSPECTION DIVISION WILL BE SUBJECT TO REMOVAL AND REPLACEMENT BY AND AT THE EXPENSE OF THE CONTRACTOR.

11. The contractor will keep the area on top of and around the water meter box free of all objects and debris.

## MISCELLANEOUS

CABLE LOCATOR
CONTRACTOR TO CONTACT TIME WARNER CABLE LOCATOR 48 HOURS PRIOR TO EXCAVATION AT 1-800-545-6005. CONTRACTOR HAS RESPONSIBILITY TO PROTECT AND SUPPORT CABLE TV PLANT DURING CONSTRUCTION.

C.P.S. LOCATOR
CONTRACTOR SHALL CALL THE TEXAS STATE WIDE ONE LOCATOR NUMBER 1-800-545-6005 FOR LOCATES, 48 HOURS BEFORE BEGINNING ANY EXCAVATION.
DUE TO FEDERAL REGULATIONS TITLE 49, PART 192.181, CPS MUST MAINTAIN ACCESS TO GAS VALVES AT ALL TIMES. THE CONTRACTOR MUST PROTECT AND WORK AROUND ANY GAS VALVES THAT ARE IN THE PROJECT AREA.

SAN ANTONIO WATER SYSTEM LOCATOR
CONTRACTOR TO NOTIFY THE SAN ANTONIO WATER SYSTEM MONITORING DIVISION AT 704-7109 48 HOURS PRIOR TO EXCAVATION.

TELEPHONE LOCATOR
CONTRACTOR TO CONTACT THE TELEPHONE COMPANY CABLE LOCATOR 48 HOURS PRIOR TO EXCAVATION AT 1-800-545-6005. CONTRACTOR HAS THE RESPONSIBILITY TO PROTECT AND SUPPORT TELEPHONE COMPANY PLANT DURING CONSTRUCTION.

CITY OF SAN ANTONIO TRAFFIC SIGNAL LOCATOR
CONTRACTOR TO CONTACT CITY OF SAN ANTONIO DEPARTMENT OF PUBLIC WORKS 48 HOURS PRIOR TO EXCAVATION AT 210-207-7765, CONTRACTOR HAS THE RESPONSIBILITY TO PROTECT AND SUPPORT CITY OF SAN ANTONIO SYSTEMS DURING CONSTRUCTION.

TXDOT TRAFFIC SIGNAL LOCATOR
CONTRACTOR TO CONTACT TXDOT TRAFFIC SIGNAL SHOP 48 HOURS PRIOR TO EXCAVATION AT 210-615-5975. CONTRACTOR HAS THE RESPONSIBILITY TO PROTECT AND SUPPORT TXDOT SYSTEMS DURING CONSTRUCTION.

TXDOT ELECTRICAL SYSTEMS LOCATOR
CONTRACTOR TO CONTACT TXDOT ELECTRICAL SYSTEMS SHOP 48 HOURS PRIOR TO EXCAVATION AT 210-615-5866. CONTRACTOR HAS THE RESPONSIBILITY TO PROTECT AND SUPPORT TXDOT SYSTEMS DURING CONSTRUCTION.

TXDOT TRANSGUIDE SYSTEMS LOCATOR
CONTRACTOR TO CONTACT TXDOT TRANSGUIDE SYSTEM SHOP 48 HOURS PRIOR TO EXCAVATION AT 210-731-5131. CONTRACTOR HAS THE RESPONSIBILITY TO PROTECT AND SUPPORT TXDOT SYSTEMS DURING CONSTRUCTION.

# GENERAL NOTES

## WATER

1. FIRE HYDRANTS SHALL BE MINIMUM 1.5 METER BURY.
2. ALL WORK SHALL CONFORM WITH CURRENT SAN ANTONIO WATER SYSTEM (SAWS) SPECIFICATIONS.
3. ALL 16" AND 12" DUCTILE IRON (D.I.) AND PVC PIPE SHALL BE CLASS 150.
4. ALL MAINS SHALL BE HYDROSTATICALLY TESTED BY THE CONTRACTOR AS PROVIDED FOR IN THE SPECIAL CONDITIONS. THE ENGINEER AND INSPECTOR SHALL BE PRESENT DURING THE TEST.
5. ALL THRUST BLOCKING SHALL BE INSTALLED IN ACCORDANCE WITH SAWS STANDARD DRAWINGS INCLUDED IN THE PLANS. THERE WILL BE NO SEPARATE PAYMENT MADE FOR THRUST BLOCKING.
6. IT IS THE CONTRACTOR'S RESPOSIBILITY TO SEE THAT ALL SIGNS AND BARRICADES ARE PROPERLY INSTALLED AND MAINTAINED. ALL LOCATIONS AND DISTANCES WILL BE DECIDED UPON IN THE FIELD BY THE CONTRACTOR USING THE TEXAS MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES.
7. BARRICADES, SIGNS AND LIGHTS SHALL BE CONFORM TO THE "TYPICAL SIGN AND BARRICADE STANDARDS" SHEETS ANDTHE TEXAS MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES.
8. TRENCH EXCAVATION PROTECTION SHALL BE ACCOMPLISHED AS REQUIRED BY THE PROVISIONS OF PART 1926, SUBPART "P", EXCAVATION, TRENCHING, AND SHORING OF THE OCCUPATIONAL SAFETY AND HEALTH STANDARDS AND INTERPRETATIONS.
9. THE CONTRACTOR SHALL INSTALL MECHANICAL JOINT (M.J.) FITTINGS ON DUCTILE IRON (D.I.) PIPE. SHOULD OTHER PIPE MATERIALS BE UTILIZED IN ACCORDANCE WITH SAWS STANDARDS SPECIFICATIONS APPROPRIATE "RING-TIGHT" JOINT FITTINGS SHALL BE USED.
10. ALL FACILITIES SHOWN TO ABANDONED SHALL BE REMOVED AS NECESSARY AS PART OF RIGHT-OF-WAY PREPARATION. CONTRACTOR SHALL PLUG ALL FACILITIES LEFT IN PLACE TO INSURE STRUCTURAL STABILITY OF FINAL ROADWAY CONSTRUCTION. (SUBSIDIARY TO RIGHT-OF-WAY PREPARATION)
11. SAWS SHALL MACHINE CHLORINATE NEW WATER MAINS GREATER THAN 750 FEET IN LENGTH. CONTRACTOR SHALL CHLORINATE NEW MAINS HAVING LENGTHS OF 750 FEET OR LESS WITH HTH.

## NOTES:

NSPI DENOTES NO SEPARATE PAY ITEM

ALL TIE-INS ARE TO BE DONE AT NIGHT OR AT A TIME WHICH IS LEAST INCONVENIENT TO THE CUSTOMERS.(NO SEPARATE PAY ITEM)

THE LOCATION AND EXISTENCE OF UNDERGROUND CABLE INDICATED ON THE PLANS ARE TAKEN FROM THE BEST RECORDS AVAILABLE AND ARE NOT GUARANTEED TO BE ACCURATE.

THE CONTRACTOR SHALL BE RESPONSIBLE FOR RESTORING TO ITS ORIGINAL OR BETTER CONDITION FROM DAMAGES DONE TO EXISITING FENCES, CURBS, STREETS, DRIVEWAYS, SIDEWALKS, LANDSCAPING AND STRUCTURES.

THE CONTRACTOR SHALL NOT PLACE ANY WASTE MATERIALS IN THE 100 YEAR FLOOD PLAIN WITHOUT FIRST OBTAINING AN APPROVED FLOOD PLAIN PERMIT.

ALL ELEVATIONS FOR SAN ANTONIO WATER SYSTEM FACILITY ADLUSTMENT SHALL BE REFERENCED FROM BENCHMARKS ESTABLISHED FOR THIS PROJECT BY TXDOT.

## TRAFFIC CONTROL NOTES:

1. CONTRACTOR SHALL MAINTAIN OPEN TRAFFIC LANES ON LOOP 1604 AS DIRECTED IN THE LOOP 1604 TRAFFIC CONTROL PLANS AND/OR AS DIRECTED BY THE TxDOT INSPECTOR(S).
2. CONTRACTOR WORK ON LOOP 1604 SHALL BE LIMITED TO THE TIME SPECIFIED IN THE LOOP 1604 TRAFFIC CONTROL PLANS AND/OR AS DIRECTED BY THE TxDOT INSPECTOR(S).
3. TRAFFIC CONTROL FOR WATER MAIN AND SANITARY SEWER MAIN CONSTRUCTION SHALL CONFORM TO TxDOT TRAFFIC CONTROL PLAN STANDARD SHEETS: TCP NOTES - 98, TCP (1-1)-98, TCP (1-2)-98, TCP (1-3)-98, TCP (1-4)-98, TCP (2-1)-98, TCP (2-2)-98, TCP (2-3)-98, TCP (2)-98, TCP (6-1)-98A, TCP (6-2)-98A, TCP (6-3)-98A, TCP (6-4)-98A, TCP (6-5)-98A, TCP (6-6)-98A, TCP (6-7)-98A, TCP (6-8)-98, AND TCP (7-1)-98.
   IF THESE TRAFFIC CONTROL PLAN STANDARD SHEETS ARE NOT CONTAINED WITH THE LOOP 1604 TRAFFIC CONTROL PLANS, THEY MAY BE OBTAINED ON THE TxDOT WEBSITE AT 'www.dot.state.tx.us' UNDER THE HEADINGS OF "Business" & "Plans - TxDOT CAD Standard Plan Files" & Traffic Engineering Standard Plan Sheets (English and Metric)".
   TxDOT BARRICADE STANDARDS BC (1 THRU 9C)-98 SHALL ALSO BE IMPLEMENTED BY THE CONTRACTOR. THESE STANDARDS MAY BE FOUND IN THE LOOP 1604 PLANS OR MAY BE OBTAINED AT THE WEBSITE IDENTIFIED IN THE PRECEDING PARAGRAPH.

## TRENCH EXCAVATION PROTECTION:

CONTRACTOR AND/OR CONTRACTOR'S INDEPENDENTLY RETAINED EMPLOYEE OR STRUCTURAL DESIGN/GEOTECHNICAL/SAFETY/EQUIPMENT CONSULTANT, IF ANY, SHALL REVIEW THESE PLANS AND AVAILABLE GEOTECHNICAL INFORMATION AND THE ANTICIPATED INSTALLATION SITE(S) WITHIN THE PROJECT WORK AREA IN ORDER TO IMPLEMENT CONTRACTOR'S TRENCH EXCAVATION SAFETY PROTECTION SYSTEMS, PROGRAMS, AND/OR PROCEDURES FOR THE PROJECT DESCRIBED IN THE CONTRACT DOCUMENTS. THE CONTRACTOR'S IMPLEMENTATION OF THESE SYSTEMS, PROGRAMS, AND/OR PROCEDURES SHALL PROVIDE FOR ADEQUATE TRENCH EXCAVATION SAFETY PROTECTION THAT COMPLY WITH AS A MINIMUM, OSHA STANDARDS FOR TRENCH EXCAVATIONS. SPECIFICALLY, CONTRACTOR AND/OR CONTRACTOR'S INDEPENDENTLY RETAINED EMPLOYEE OR SAFETY CONSULTANT SHALL IMPLEMENT A TRENCH SAFETY PROGRAM IN ACCORDANCE WITH OSHA STANDARDS GOVERNING THE PRESENCE AND ACTIVITIES OF INDIVIDUALS WORKING IN AND AROUND TRENCH EXCAVATION.

## UTILITIES STATEMENT

THE UNDERGROUND UTILITIES SHOWN HAVE BEEN LOCATED FROM FIELD SURVEY INFORMATION AND EXISTING DRAWINGS. THE ENGINEER MAKES NO GUARANTEE THAT THE UNDERGROUND UTILITIES COMPRISE ALL SUCH UTILITIES IN THE AREA, EITHER IN SERVICE OR ABANDON. THE ENGINEER FURTHER DOES NOT WARRANT THAT THE UNDERGROUND UTILITIES SHOWN ARE IN THE EXACT LOCATION INDICATED. THE ENGINEER HAS NOT PHYSICALLY LOCATED THE UNDERGROUND UTILITIES.

OTHER NOTES:

1) ALL WATER MAIN BEING INSTALLED IN LOOP 1604 RIGHT-OF-WAY SHALL BE INSTALLED IN ACCORDANCE WITH THE PHASING TRAFFIC CONTROL PLANS PREPARED BY THE TEXAS DEPARTMENT OF TRANSPORTATION FOR THE LOOP 1604 PROJECT.
2) CONTRACTOR SHALL VERIFY LOCATION OF ALL EXISTING UTILITIES PRIOR TO BEGINNING CONSTRUCTION.
3) ALL HORIZONTAL AND VERTICAL BENDS, PI's AND PVI's SHALL HAVE THRUST BLOCKING. THRUST BLOCKING SUBSIDIARY TO PIPE INSTALLATION.
4) PIPE WILL HAVE RESTRAINED JOINTS AS SHOWN ON PLANS RESTAINED JOINTS SUBSIDIARY TO PIPE INSTALLATION.
5) ABANDONMENT AND REMOVAL OF EXISTING WATER MAINS SHALL BE NO SEPARATE PAY ITEM (NSPI).
6) EXCESS EXCAVATED MATERIAL SHALL BE HAULED OFF SITE. THIS WORK SHALL BE SUBSIDIARY TO COST OF PIPE.
7) IF CONTRACTOR DAMAGES NEW VEGETATION, SEED, TOP SOIL OR OTHER IMPROVEMENTS INSTALLED BY TXDOT, CONTRACTOR SHALL REPAIR OR REPLACE DAMAGED GOODS TO SATISFACTION OF TXDOT AT CONTRACTOR'S EXPENSE.
8) EXISTING FIRE HYDRANTS ON MAINS TO BE ABANDONED WILL BE REMOVED AND RETURNED TO SAWS (NSPI).
9) 6" VALVE TO FIRE HYDRANT IS SUBSIDIARY TO FIRE HYDRANT INSTALLATION.
