Reinforcing Steel Mills

Reference

Refer to the Spec Book for information on the following.

- Item 440, “Reinforcing Steel

For epoxy coated reinforcing steel, refer to the “[Epoxy Applicators for Reinforcing Steel](#)” MPL.

General

The following bar, wire, and welded wire reinforcement mills have been pre-approved to furnish reinforcing steel in accordance with DMS-7320, “Qualification Procedure for Reinforcing Steel Producing Mills,” which is referenced in Item 440.

The Department reserves the right to conduct random sampling and testing, and visual inspections of materials from approved reinforcing steel mills. Department representatives may sample and inspect material at the mill or the project site. Materials and Tests Division (MTD) reserves the right to test samples to verify compliance with Item 440.

How to Read Bar Markings for Deformed Bars

Bar markings identify the following four items, in order: 1) bar manufacturer, 2) bar size, 3) steel type, and 4) steel grade (see FIGURE 1). Bar marks are numbers, letters, and symbols that may be placed parallel, perpendicular, or at an angle to the bar. A bar mark may be placed in a single space between two bar deformations, or spread out over several spaces (see “Bar Size” in FIGURE 1).

FIGURE 1
Bar Markings
(English examples shown)

Bar Size		
English Bar Size	Metric Equivalent Bar Size	Diameter (in.)
3	10	0.375
4	13	0.500
5	16	0.625
6	19	0.750
7	22	0.875
8	25	1.000
9	29	1.128
10	32	1.270
11	36	1.410
14	43	1.693
18	57	2.257

Steel Type	
S	A 615
W	A 706 (Weldable)
A	A 996, Type A (Axle)
R	A 996, Type R (Rail)

Note: May show “S” and “W” if bar is produced to meet both ASTM A615 & A706.

Steel Grade - Line(s) ^Δ			
English		Metric Equivalent	
Grade	# of Line(s)	Grade	# of Line(s)
40	(no lines)	280	(no lines)
60	1 line	420	1 line
75	2 lines	520	2 lines
80	3 lines	550	3 lines

Steel Grade - Number ^Δ			
English		Metric Equivalent	
Grade	(none req.)	Grade	(none req.)
40	(none req.)	280	(none req.)
60	60	420	4
75	75	520	5
80	80	550	6

^Δ Steel grade marks shown as line(s) are placed along the length of the bar on the front or back side. These grade line(s) must cross a minimum of five bar deformations; and should not be confused with the “Main Ribs.” (See FIGURE 1.) See the applicable ASTM for additional grades not shown.
