Guidelines for
Handling
Asbestos

Through the collaborative efforts of the Bridge Division (BRG), the Construction Division (CST) and the Environmental Affairs Division (ENV), the *Summary of Asbestos Procedures for TxDOT Projects* was recently issued. The document was sent from Amadeo Saenz Jr., P.E., to all TxDOT offices on January 26, 2007.

The document outlines and explains the steps required to comply with state and federal regulations regarding asbestos-containing materials (ACM) on construction projects. The Texas Department of State Health Services (DSHS) has reviewed this document to ensure TxDOT is in compliance with the applicable rules and procedures.

A link to this guidance document is available on the intranet at:
