INTRODUCTION

The Texas Department of Transportation (TxDOT) has developed this Stormwater Management Program (SWMP) in accordance with the requirements of the Texas Commission on Environmental Quality (TCEQ), Texas Pollutant Discharge Elimination System (TPDES) Municipal Separate Storm Sewer System (MS4) permit WQ0005011000. The purpose of the SWMP is to describe the Minimum Control Measures (MCM) and Best Management Practices (BMPs) for implementation of specific programs, controls, and activities with the intent of reducing the potential discharge of pollutants from the MS4 that could reach Waters of the United States (WUS).

This document presents TxDOT's SWMP for TPDES Permit No. WQ0005011000 for the following 22 TxDOT districts:

<table>
<thead>
<tr>

</table>

*A small portion of the Killeen UA extends into Lampasas in the Brownwood District. The Waco District will implement and report BMP activities for this part of the MS4.

It is the intent of TxDOT to develop and implement a comprehensive SWMP that establishes measurable goals, oversight, and enforcement, to comply with Permit No. WQ0005011000. As vital components to achieving and maintaining compliance, TxDOT has established the following:

- A Division of Environmental Affairs to oversee and coordinate all environmental policy and related issues, including water quality;
- A multi-disciplinary MS4 Stormwater Advisory Team (SWAT). The MS4-SWAT represents various divisions and districts within TxDOT who have been given the task of coordinating, reviewing, and developing guidelines and policies related to stormwater management, including the TPDES requirements;
- A "Memorandum of Understanding" (MOU) with TCEQ (see Attachment A). The MOU with TCEQ has been entered into with TxDOT outlining, among other things, a coordination procedure allowing for the TCEQ to review and comment on TxDOT's environmental assessments prepared for roadway projects early in the project development stages;
- An extensive research project with the University of Texas Center for Transportation Research. The research was performed to specifically study highway runoff and the effectiveness of certain control measures. This research showed grassy swales to be effective at reducing runoff volumes and pollutant concentrations;
- Environmental Management System (EMS). TxDOT’s EMS program ensures compliance with environmental requirements related to road construction. Through the EMS program, TxDOT strives to increase environmental protection, reduce potential violations, improve relationships and interaction with regulatory agencies and the public, and minimize risk to project budgets and schedules that may result from potential environmental non-compliance. The EMS Team Leaders consist of knowledgeable and experienced personnel who work closely with District staff to ensure regulatory compliance; and,

- TxDOT’s “Don’t Mess with Texas” campaign and “Adopt-a-Highway” program. These programs educate the public on how to keep pollutants from our water, and provide opportunities for groups and/or individuals to participate in keeping our waters clean.
PURPOSE OF THE SWMP

This SWMP includes the statewide and district-specific pollution prevention measures, treatment or pollutant removal techniques, stormwater monitoring, use of legal authority, and other appropriate means to control the quality of stormwater discharged from the TxDOT MS4 to the Maximum Extent Practicable (MEP). These program requirements are presented as specified in TxDOT’s TPDES Permit, while presenting supplemental information to further define TxDOT’s program. The program incorporates measurable goals, whenever practicable, and includes controls necessary to effectively prohibit the discharge of non-stormwater into the MS4. The SWMP covers the term of the permit and is updated as necessary to ensure compliance.

This document is the required SWMP for areas of the state subject to TPDES MS4 regulations: the TxDOT right-of-way (ROW) within the urbanized areas established by the 2000 and 2010 U.S. EPA Phase II Urbanized Area maps, and TxDOT’s MS4 located in Phase I areas based on the 1990 U.S. Bureau of Census - hereafter referred to as "TxDOT’s regulated area". The SWMP includes the relevant TPDES permit language (depicted in italics) for each MCM. It describes and defines BMPs for each of the MCMs, measurable goals for each BMP, and an implementation schedule for all activities. The Environmental Affairs Division will evaluate the need for revision of the SWMP at least annually. Additional BMPs may be included, and equivalent BMPs substituted, based on these annual evaluations. Elimination of a BMP, without the inclusion of an equivalent BMP, requires TxDOT to submit a notice of change (NOC) to TCEQ.
1.0 MCM 1 - PUBLIC EDUCATION, OUTREACH, AND INVOLVEMENT

1.1 Permit Requirements

(a) Public Education and Outreach

(1) The permittee shall continue to develop, implement, and maintain a comprehensive stormwater education and outreach program to educate employees, contractors, and the traveling public of hazards associated with illegal discharges, improper disposal of waste, floatables, toxic materials, used oil, disposal and management of pesticides, herbicides and fertilizers and about the impact that stormwater discharges can have on local waterways, as well as the steps that the traveling public can take to reduce pollutants in stormwater.

The permittee shall assess program elements that were described in the previous permits, modify as necessary, and develop and implement new elements, as necessary, to continue reducing the discharge of pollutants from the MS4 to the MEP. New elements and all elements in newly regulated Phase II MS4 areas must be fully implemented by the end of this permit term. The program must, at a minimum:

a. Define the goals and objectives of the program based on high priority community-wide issues (for example, reduction of trash and debris discharges from the MS4, promoting previous public campaigns used in the MS4, or increasing the numbers of illicit discharge reporting). The permittee shall document activities conducted and materials used to fulfill this control measure, if applicable. Documentation must be detailed enough to demonstrate the amount of resources used to address each group. This documentation must be included in the annual reports required in this permit;

b. Identify the target audience(s);

c. Develop or utilize appropriate educational materials, such as printed materials, billboard and mass transit advertisements, signage at select locations, radio advertisements, television advertisements, and websites; and

d. Determine cost effective and practical methods and procedures to meet the above goals and objectives.

(2) Throughout the permit term, the permittee shall make the educational program available to convey the education message to the target audience(s) at least annually.

(3) The permittee shall review and update as necessary, the statewide SWMP and MCM implementation procedures required by this permit. Any changes must be reflected in the statewide annual reports. Such written procedures must be maintained at the District’s office and headquarters, as a separate documentation within the statewide SWMP and made available for inspection by the TCEQ.
(b) Public Involvement

The permittee shall involve the public in the planning and implementation activities related to developing and implementing the SWMP. At minimum, the permittee shall comply with any state and local public notice requirements.

The permittee shall assess program elements that were described in previous permits, modify as necessary, and develop and implement new elements, as necessary, to continue reducing the discharge of pollutants from the MS4 to the MEP. New elements and all elements in newly regulated Phase II MS4 areas must be fully implemented by the end of this permit term. At a minimum, the permittee shall:

1. If feasible, consider using public input (for example, the opportunity for public comment, or public meetings) in the implementation of the program;

2. If feasible, create opportunities for citizens to participate in the implementation of control measures, such as stream clean-ups, storm drain stenciling, volunteer monitoring, and educational activities; and

3. Ensure the public can easily find information about the statewide SWMP.

1.2 Program Overview

Permit No. WQ0005011000 requires that TxDOT implement a public education program to distribute educational materials to its applicable communities or conduct equivalent outreach activities about the impacts of stormwater discharges on water bodies and the steps that the public can take to reduce pollutants in stormwater runoff (see 40 CFR §122.34(b)(1)). Permit No. WQ0005011000 also requires a public involvement and participation program that, at a minimum, complies with state and local public notice requirements (see 40 CFR § 122.34(b)(2)).

1.2.1 Public Education, Outreach, and Involvement

TxDOT has several programs, publications, and forums for educating and involving the public, TxDOT employees, and contractors on issues affecting stormwater quality. Elements of the program focus on general public programs (e.g., “Don’t Mess With Texas” campaign and “Adopt-a-Highway” program) and inter-agency education on environmental issues, such as proper handling and application of pesticides and fertilizers, proper handling of used oil and toxic materials, and improvement and awareness of construction and maintenance activities.

TxDOT has developed, implemented, and continues to maintain a comprehensive stormwater education and outreach program. The comprehensive program focuses on educating target audiences about the impacts that illegal discharges (i.e., third-party discharges into the TxDOT MS4 and illicit storm sewer connections) and improper disposal
of waste and litter can have on stormwater discharges. TxDOT also provides steps that target audiences can take to reduce pollutants in stormwater runoff.

There are no residences, businesses, or commercial and industrial facilities located within TxDOT’s regulated area. For this MCM TxDOT will target users of our roadways.

TxDOT has determined that the following audiences are high-priority statewide targets:

- TxDOT employees;
- General traveling public; and,
- Construction site personnel.

TxDOT has implemented an educational BMP and participation/involvement BMP to target the above audiences. This includes:

1. Educational BMP – To address improper disposal of waste, TxDOT continues to develop and promote the “Don’t Mess with Texas” campaign. The “Don’t Mess with Texas” campaign is a nationally recognized, award-winning public education/outreach program. Its message is very effective and highly recognizable statewide and the campaign itself has received considerable recognition, both nationally and internationally, as an excellent example of public education/outreach. TxDOT has begun the “Don’t Mess With Texas Water” campaign, developed under the Texas Legislature (82(r) HB 451) [http://www.legis.state.tx.us/tlodocs/82R/billtext/html/HB00451F.HTM]. This program is implemented through an MOU between TCEQ and TxDOT (Attachment A).

2. Outreach and Involvement BMP – To encourage public participation/involvement in minimizing improper waste disposal, TxDOT will continue to develop and sponsor the “Adopt-a-Highway” program. Individuals and/or groups are encouraged to volunteer for litter collection activities at designated “Adopt-a-Highway” segments. During past permit terms, this program has proven to be highly successful in generating new volunteers and providing cleaner roadway segments. TxDOT provides “Adopt-a-Highway” groups with stormwater related educational materials and the equipment and supplies necessary to clean their adopted segments. In addition, TxDOT places roadway signs advertising the “Adopt-a-Highway” entity responsible for cleaning the subject segment. TxDOT maintains a list of current “Adopt-a-Highway” individuals/groups.

TxDOT utilizes public input (for example, the opportunity for public comment or public meetings) in the implementation of the MS4 program through the Transportation Improvement Program (TIP) or Statewide Transportation Improvement Program (STIP). If a public meeting is held, a citizen advisory committee is formed, or a similar public function is established to allow the public an opportunity to participate in transportation development and the associated SWMP implementation. TxDOT will comply with all applicable state and local public notice requirements for the activity.

TxDOT has created opportunities for citizens to participate in the implementation of control measures through the “Adopt-a-Highway” program.
TxDOT keeps a copy of the Statewide SWMP at the ENV Division in Austin and at each District office for the public to gain access. An electronic copy of the SWMP is posted on TxDOT’s ENV website.

The educational, participation, and involvement BMP activities and materials utilized to fulfill this control measure will be documented. Records of these activities will be summarized in the annual reports and will describe the message of the educational campaign, the program’s success summary (e.g., reduction of trash, miles of “Adopt-a-Highway” program), and the events or methods used to provide the information to the target audience. Included in each BMP is a description of the records that will be maintained and included in the annual reports.

1.3 Best Management Practices and Measurable Goals

1.3.1 Don’t Mess with Texas Program

TxDOT will continue to develop and implement the “Don’t Mess with Texas” campaign. TxDOT will utilize public service announcements (PSAs) to get the department’s anti-littering message to the public. To promote airtime, TxDOT will distribute ready-to-use ads to local TV or radio stations.

The "Don't Mess with Texas" campaign increases public awareness that cigarette butts not only create litter but also contribute to wildfires by promoting its "Texas is Not Your Ashtray" message with statewide advertising that includes social media messaging, banner ads on websites, and outdoor billboards.

TxDOT programs such as “Don’t Mess with Texas” are successful contributors to litter abatement. This program promotes, publicizes, and helps facilitate the public to be involved and to report to TxDOT the presence of improper disposal of materials along the highway and into the MS4 area.

TxDOT will report the assortment of advertisements and outreach efforts from the DMWT program, such as the number and cost of permit year advertisements aired on radio and television, outreach efforts through social media, banner ads, and outdoor billboards.

1.3.2 Adopt a Highway Program

TxDOT will typically assign local volunteer groups to pick up litter along a designated segment of highway as part of the "Adopt-a-Highway" program. Under this program, groups sign up to adopt a two mile length of highway and make sure that litter is periodically picked up from the ROW along the highway.

TxDOT will report the number of permit year volunteer groups and highway miles adopted, and provide an estimate of the volume of trash and debris collected and disposed of.
1.3.3 Texas Trash-Off Program

The “Texas Trash-Off” is an annual TxDOT event encouraging people across the state to join forces to clean up the millions of pieces of litter that accumulate on Texas roadways each year.

Trash-Off is the single largest one-day cleanup event in the state and is Texas’s signature event for the Great American Cleanup, the nation’s largest community improvement program. This BMP has, in the past, saved approximately $3 million in pick-up costs throughout the state.

TxDOT will include in its annual report a copy of the latest Trash-Off Planner, the statewide number of volunteers participating, the roadway miles cleared of litter and debris, and the pounds of trash collected.

1.3.4 Texas Highways Magazine

Texas Highways magazine is published monthly by TxDOT's Travel Information Division. Texas Highways, the official travel magazine of Texas, encourages proper use of TxDOT roads and presents ways to reduce littering while traveling state roadways. In addition to the published magazines, electronic magazines are sent monthly by email to electronic subscribers. This magazine reaches more than 300,000 subscribers and promotes environmental stewardship through highlighting Texas’ natural beauty.

TxDOT will report the number of permit year magazines distributed including, as available, the number of electronic copies distributed.

1.3.5 TxDOT’s Webpages

TxDOT’s webpage (https://www.txdot.gov/) has an environmental section with information on environmental resources and a link to the “Don’t Mess with Texas” litter prevention campaign webpage, (http://www.dontmesswithtexas.org). The website is designed to promote, publicize, and facilitate the public to be involved and to report to TxDOT the presence of improper disposal of materials by participating in the listed programs. The website also contains a section for reporting a litterer.

TxDOT’s Environmental Affairs webpage (http://www.txdot.gov/inside-txdot/division/environmental.html) has information on environmental resources and a link to the stormwater program at: https://www.txdot.gov/inside-txdot/division/environmental/stormwater.html. The website is designed to educate the public about impacts from illicit discharge and improper disposal of materials to stormwater. The website also contains information on actions to take to eliminate pollutants into water sources from stormwater runoff.

TxDOT will report the number of permit year views on each of the four websites listed above.
1.3.6 **Education of Construction Site Personnel**

TxDOT provides education for both TxDOT and contractor employees involved in road construction through mandated training based on job role. All employees involved in earth disturbing road construction activities will review environmental videos as defined in TxDOT Specification SP506-003 (See Attachment B) and the EMS Training Matrix (see Attachment B). Stormwater and EMS posters provide training to employees and the traveling public.

TxDOT requires a preconstruction meeting for projects that include the CGP NOI to review an environmental agenda. The review of the requirements provides awareness and ensures understanding of environmental needs and permit requirements for each project.

TxDOT will report the number of permit year TxDOT and contractor employees that received training. These numbers will be provided statewide, not only for the MS4 regulated area, since TxDOT and contractor employees may work in multiple locations both inside and outside the MS4 area.

1.3.7 **Education of Herbicide Application Personnel**

All TxDOT employees that work in TxDOT's regulated area, including maintenance yards, are trained in the proper use of materials that may impact stormwater quality. Training includes material handling and proper disposal for general tasks such as roadway repairs or vehicle maintenance. Specific activities such as pesticide application are performed by personnel certified to perform that activity safely.

TxDOT will report the number permit year employees that received herbicide application training.

2.0 MCM 2 – ILLICIT DISCHARGE DETECTION AND ELIMINATION (IDDE)

2.1 Permit Requirements

(a) Program Development

(1) The permittee shall continue to develop, implement and enforce a program to detect, investigate, and eliminate illicit discharges into the MS4. The program must include a plan to detect and address non-stormwater discharges, including illegal dumping to the MS4 system.

The permittee shall assess program elements that were described in previous permits, modify as necessary, and develop and implement new elements, as necessary, to continue reducing the discharge of pollutants from the MS4 to the MEP. New elements and all elements in newly regulated Phase II MS4 areas must be fully implemented by the end of this permit term. See also Part III.A.1(g).

The Illicit Discharge Detection and Elimination (IDDE) program must include the following:

a. Up-to-date MS4 area maps (See Part III.B.2(c));
b. Methods for informing and training MS4 field staff (See Part III.B.2.(d));
c. Procedures for tracing the source of an illicit discharge (See Part III. B.2.(g)(2));
d. Procedures for removing the source of the illicit discharge (See Part III.B.2.(g)(3));
e. Procedures for conducting inspections (See Part III.B.2.(h)); and
f. Procedures to prevent and correct any leaking on-site sewage disposal systems that discharge into the MS4.

(2) If illicit connections or illicit discharges are observed related to another operator's MS4, the permittee shall notify the other MS4 operator within 48 hours of discovery. If notification to the other MS4 operator is not practicable, then the permittee shall notify the appropriate TCEQ regional office of the possible illicit connection or illicit discharge.

(3) If another MS4 operator notifies the permittee of an illegal connection or illicit discharge to the MS4, then the permittee shall follow the requirements specified in Part III.B.2.(e).

(4) The permittee shall review and update as necessary, the statewide SWMP and MCM implementation procedures required by Part III.A.2. Any changes must be reflected in the statewide annual reports. Such written procedures must be maintained at the district office and in the SWMP and made available for inspection by the TCEQ.
(b) Allowable Non-Stormwater Discharges

Non-stormwater flows listed in Part II.C do not need to be considered by the permittee as an illicit discharge requiring elimination, unless the permittee or the TCEQ identifies the flow as a significant source of pollutants to the MS4s.

(c) MS4 areas mapping

The permittee shall maintain an up-to-date MS4 area map, which must be located on site and available for review by the TCEQ. The MS4 map must show at a minimum the following information:

1. The location of all MS4 outfalls that are operated by the permittee and that discharge into waters of the U.S.; and
2. The location and name of all surface waters receiving discharges from all the MS4 outfalls.

(d) Education and Training

The permittees shall implement a method for informing or training all the permittee’s field staff that may come into contact with, or otherwise observe, an illicit discharge or illicit connection to the MS4 as part of their normal job responsibilities. Training program documentation and attendance lists must be maintained at the permittee’s headquarters and at the District’s office and made available for review by the TCEQ.

(e) Public Reporting of Illicit Discharges and Spills

To the extent feasible, the permittee shall publicize and facilitate public reporting of illicit discharges or water quality impacts associated with discharges into or from the MS4. The permittee shall provide a central contact point to receive reports; for example, by including a sign on the highway or rest stop area with a telephone number for complaints and spill reporting.

(f) The permittee shall continue and improve as necessary existing programs which prevent, contain, and respond to spills that may discharge into the MS4. The spill response program may include a combination of spill response actions by the permittee (and/or another public or private entity), and legal requirements for private entities within the jurisdiction of the permittee. The permittee shall maintain illicit discharge and spill response procedures on site or in the SWMP.

(g) Source Investigation and Elimination

1. Minimum Investigation Requirements – Upon becoming aware of an illicit discharge, the permittee shall conduct an investigation to identify and locate the source of such illicit discharge as soon as practicable.

   a. The permittee shall prioritize the investigation of discharges based on their relative risk of pollution. For example, sanitary sewage may be considered a high priority discharge. Similarly, priority areas, likely to have illicit discharges, should be considered a high priority for investigation. (See item B.2.(i)(4) below).
b. The permittee shall report to the TCEQ immediately upon becoming aware of the occurrence of any illicit flows believed to be an immediate threat to human health or the environment.

c. The permittee shall track all investigations and document, at a minimum: the date(s) the illicit discharge was observed; the results of the investigation; any follow-up of the investigation; and the date the investigation was closed.

(2) Identification and Investigation of the Source of the Illicit Discharge – The permittee shall investigate and document the source of illicit discharges where the permittee has jurisdiction to complete such an investigation. If the source of illicit discharge extends outside the permittee’s boundary, the permittee shall notify the adjacent permitted MS4 operators or the TCEQ Program Support Section according to Part III.A.3.b.

(3) Corrective Action to Eliminate Illicit Discharge - If and when the source of the illicit discharge has been determined, the permittee shall immediately notify the responsible party of the problem, and shall require, to the MEP, the responsible party to perform all necessary corrective actions to eliminate the illicit discharge. If it is not feasible for the permittee to enforce the incident, the permittee shall notify an adjacent MS4 operator with enforcement authority or TCEQ Program Support Section according to Part III.A.3.

(h) Inspections

The permittee shall conduct inspections, as determined appropriate, in response to complaints, and shall conduct follow-up inspections as needed to ensure that corrective measures have been implemented by the responsible party.

(i) Additional Requirements for Previous Phase I Permitted Areas

In addition to all the requirements described above, the permittee shall meet the following requirements in areas that previously were permitted under a Phase I permit.

(1) Overflows and Infiltration – The permittee shall implement controls, where necessary and feasible, to address dry weather and wet weather overflows from sanitary sewers into the MS4s. The permittee shall limit the seepage from municipal sanitary sewers into the MS4s to the MEP.

(2) List of discharges - The permittee shall maintain, and update as necessary, a list of discharges to the MS4 that have been issued an NPDES or a TPDES permit. The list shall include the name, location and permit number of the discharger.

(3) Hazardous Waste and Used Motor Vehicle Fluids

a. The permittee shall prohibit the discharge or disposal of used motor vehicle fluids, hazardous wastes, and the intentional disposal of collected quantities of grass clippings, leaf litter, and animal wastes into the MS4s.

b. The permittee shall ensure the implementation of programs to collect used motor vehicle fluids (including, at a minimum, oil and antifreeze) and
hazardous waste materials (including paint, solvents, pesticides, herbicides, and other hazardous materials) for recycling, reuse, or proper disposal. Such programs must be readily available to the permittee’s contractors and to the permittee’s employees and shall be publicized and promoted on a regular basis.

(4) Identification of Priority Areas – The permittee shall identify priority areas likely to have illicit discharges and shall document the basis for the selection of each priority area and shall create a list of all priority areas identified. This priority list must be available for review by the TCEQ.

(5) Alternate Stormwater Assessment Program for Previous Phase I Permitted Areas

1) Alternate Dry Weather Screening Program – The permittee shall continue to screen and detect the presence of illicit connections and improper discharges from adjacent MS4s and illegal third parties discharges to the permittee’s MS4. All areas that were permitted under the Phase I MS4 program (See Part II.A) must continue to be screened as specified in the statewide SWMP at least once during the permit term.

2) Alternate Wet Weather Program – In previous Phase I permitted areas where the permittee was responsible for outfall or watershed monitoring under the Wet Weather Characterization program, the permittee shall continue to evaluate the watershed using existing stormwater characterization data collected by reliable sources such as TCEQ, local river authorities, partnerships, and/or other local efforts as appropriate. The analysis and interpretation of this data shall be submitted to TCEQ in the year 4 annual report. Previous Phase I areas under this requirement include: TxDOT Beaumont (WQ0004644000), City of San Antonio (WQ0004284000), TxDOT Austin (WQ0004645000), City of Houston (WQ0004685000), TxDOT Houston District (Pasadena) (WQ0004520000), City of Fort Worth (WQ0004350000), City of Arlington (WQ0004635000), and City of Dallas (WQ0004521000).

(j) Additional Requirements for Previous TxDOT – Austin District Phase I Permit (WQ0004645000)

In addition to all the requirements described above, the permittee shall meet the following requirements in specific areas that previously were permitted under the TxDOT Austin-District Phase I permit.

Spill Prevention and Response – the permittee shall continue to implement and improve, as necessary, programs that prevent, contain, and respond to spills that may discharge into the MS4. When cleanup of a ROW spill is necessary to prevent loss of life, personal injury, or severe property damage, the permittee shall ensure the parties responsible for the spill take all reasonable steps to minimize or prevent any adverse effects to human health or the environment. The spill response programs may include a combination of spill response actions by the permittee (and/or another public entity), and legal requirements for private entities within the jurisdiction of the permittee.
The permittee shall address spills that originate from an adjacent MS4 by notifying the appropriate local MS4 entity within a reasonable time. If the permittee does not agree with the corrective measure(s) or the time schedule proposed by the adjacent MS4, the permittee shall refer the case to the TCEQ for further action and/or enforcement.

During emergency spill response, the permittee shall provide support to the lead agency – Department of Public Safety, TCEQ, or local official during the containment and cleanup.

(1) The permittee shall continue to coordinate with the U.S. Fish & Wildlife Service to determine areas of concern for endangered karst invertebrates, submit a discussion of which, if any, existing and needed structures have been identified as potential projects to prevent spills from entering the aquifer, and report any coordination of projects identified with the U.S. Fish & Wildlife Service in the annual report.

If requested by the local jurisdiction, the permittee shall install hazardous material route signs on hazardous material routes that, by the local jurisdiction’s Fire Chief and/or Local Emergency Planning Committee, are defined and established within the specific areas that previously were permitted under the TxDOT Austin-District Phase I permit area. The posting of hazardous material route signs shall be done according to the permittee’s highway sign policies within the required areas of the permittee’s ROW.

2.2 Program Overview

TxDOT is required to develop, implement, and enforce a program to detect and eliminate illicit discharges into the MS4 (see 40 CFR §122.34(b)(3)). Through its IDDEMCM TxDOT is required to respond to complaints about illicit discharges or spills and to actively seek out illicit discharges and behaviors that could result in illicit discharges such as illegal connection to its MS4, improper disposal of wastes, or dumping of trash, oil, and/or other chemicals. Permit No. WQ0005011000 requires TxDOT to have an up-to-date MS4 map. Previously permitted Phase I areas are required to identify areas with a high risk for illicit discharges, and these areas will be prioritized for more frequent investigations. The CWA § 402(p)(3)(B)(ii), requires that TxDOT “effectively prohibit non-stormwater discharges into the storm sewers.” Permit No. WQ0005011000 provides implementation of this requirement, in part by requiring the development of procedures to investigate and eliminate illicit discharges, and methods for informing or training TxDOT staff and contractors who may come into contact or observe illicit discharges, on the identification and proper procedures for reporting illicit discharges. Permit No. WQ0005011000 requires TxDOT to develop and implement a dry weather screening program in its previously permitted Phase I areas.
2.2.1 Program Development

a) TxDOT will continue to develop, implement and enforce a program to detect, investigate, and eliminate illicit discharges into the MS4. The program includes a plan to detect and address non-stormwater discharges, including illegal dumping to the MS4 system.

TxDOT will assess IDDE program elements that were described in previous permits, modify as necessary, and develop and implement new elements, as necessary, to continue reducing the discharge of pollutants from the MS4 to the MEP. New elements and all elements in newly regulated Phase II MS4 areas will be fully implemented by the end of this permit term.

The Illicit Discharge Detection and Elimination (IDDE) program includes the following:

1) Up-to-date MS4 area maps;
2) Methods for informing and training MS4 field staff;
3) Procedures for tracing the source of an illicit discharge;
4) Procedures for removing the source of the illicit discharge;
5) Procedures for conducting inspections; and,
6) Procedures to prevent and correct any leaking on-site sewage disposal systems that discharge into the MS4.

b) If illicit connections or illicit discharges are observed related to another operator’s MS4, TxDOT will notify the other MS4 operator within 48 hours of discovery. If notification to the other MS4 operator is not practicable, then TxDOT will notify the appropriate TCEQ regional office (see Attachment C) of the possible illicit connection or illicit discharge.

c) If another MS4 operator notifies TxDOT of an illegal connection or illicit discharge to the MS4, then TxDOT will follow the requirements specified in Section 2.3.8.

d) TxDOT will review and update as necessary the SWMP and MCM implementation procedures required by Part III.A.2 of Permit No. WQ0005011000. Any changes will be reflected in the annual reports. Written procedures will be maintained at the district offices, in the SWMP, and made available for inspection by the TCEQ.

2.2.2 Allowable Non-Stormwater Discharges

This SWMP identifies categories of non-stormwater discharges that are not prohibited from being discharged into the MS4 in Attachment D, along with any necessary controls, as applicable.
2.2.3 **MS4 Areas Mapping**

TxDOT is required to develop and maintain a map of its MS4 which includes outfalls to WUS. An outfall is defined as a point source at the point where the TxDOT MS4 discharges to WUS and does not include open conveyances connecting two separate storm sewers (internal outfalls), or pipes, tunnels, or other conveyances that connect segments of the same stream or other waters of the U.S. and are used to convey waters of the U.S. For the purpose of this permit, sheet flow leaving the TxDOT MS4 without engineered channelization is not considered an outfall. Point sources such as curb cuts, traffic or right-of-way barriers with drainage slots that drain into open culverts, open swales or an adjacent property, or otherwise not actually discharging into waters of the U.S. are not considered an outfall.

TxDOT updates its map of outfalls to ensure that new outfalls are mapped during the permit term utilizing the Advanced Outfall Tracking System (AOTS) that maps and tracks the outfall locations with associated screening data and outfall classifications.

The AOTS utilizes a Global Positioning System (GPS) to collect outfall spatial and non-spatial data that includes the following:

- The location in latitude and longitude of MS4 outfalls that are operated by TxDOT and that discharge into WUS;
- The location and name of all surface waters receiving discharges from TxDOT MS4 outfalls as well as the impairment classification of each surface water;
- The outfall physical properties and the surrounding areas (including debris, staining, flow, color, etc.); and,
- The analytical results for potential or suspect illicit discharge outfalls.

2.2.4 **Education and Training**

TxDOT does not have MS4-specific field staff. Field staff consists of multi-disciplinary personnel assigned by the district engineer, and responsibilities range from maintenance to engineering. Staff perform several tasks (for example, construction inspection, emergency response, and environmental processes) during normal job responsibilities.

Personnel who perform MS4 operations are provided with training that contains information on identifying illicit discharge, preventing, and reducing potential stormwater pollution from the TxDOT MS4. Attachment B lists the applicable training classes; the list presented in Attachment B may change due to updates, new training module development, and/or removal of outdated materials.

2.2.5 **Public Reporting of Illicit Discharges and Spills**

Educating the public and training TxDOT personnel provides a proactive approach to the stormwater program. TxDOT is committed to establishing a program to promote, publicize, and facilitate public reporting of the presence of illicit discharges or water quality impacts associated with discharges from the MS4 and has recently begun the "Don’t Mess With Texas Water" program:
• The program was developed under Texas Legislature (82(r) HB 451) [http://www.legis.state.tx.us/tlodocs/82R/billtext/html/HB00451F.HTM];

• The “Don’t Mess With Texas Water” program consists of billboards placed in sensitive watershed areas that will include a phone number for reporting illicit dumping activities; and,

• The program has been implemented through an MOU between TCEQ and TxDOT.

TxDOT also maintains a stormwater web page for reporting spills and illegal dumping, and can be found at [http://www.txdot.gov/contact-us/form.html?id=swp-email].

2.2.6 Spill Prevention and Response

TxDOT has implemented and improved, as necessary, programs that prevent, contain, and respond to spills that may discharge into the MS4. When cleanup of a ROW spill is necessary, TxDOT will ensure the parties responsible for the spill take all reasonable steps to minimize or prevent adverse effects to human health or the environment. The spill response programs include a combination of spill response actions by TxDOT (and/or another public or private entity), and legal requirements for private entities within the jurisdiction of TxDOT.

TxDOT’s role in emergency spill response is to provide support to the lead agency—Department of Public Safety (DPS), TCEQ, or local official during the containment and cleanup. For more information about TxDOT’s hazardous material cleanup policy, refer to TxDOT’s Occupational Safety Manual, Chapter 5, Section 6.

Most spills are a result of a traffic incident, and usually, TxDOT is called to the scene by law enforcement. Safety of TxDOT personnel and the motoring public is priority. Department personnel are specifically prohibited from handling, cleaning up or otherwise coming in contact with toxic or hazardous materials at accident scenes or abandonment sites on the department’s ROW. Vehicle fluid cleanup of less than 25 gallons is the only exception to handling or cleaning up hazardous materials at accident scenes or abandonment sites.
The plan below outlines the responsibilities of each agency involved in an emergency spill response. They are also included in TxDOT’s Maintenance Operations Manual.

<table>
<thead>
<tr>
<th>Agency</th>
<th>Responsibilities</th>
</tr>
</thead>
</table>
| TxDOT staff*    | • Restricts public access  
                   • Provides traffic control at the site until relieved by DPS or other on-site coordinator  
                   • Report all pertinent information to supervisor  
                   • Supervisor reports information to district hazardous material coordinator  
                   • District engineer/hazardous materials coordinator notifies appropriate governmental agencies, such as TCEQ, DPS, and the local fire department |
| DPS             | • Performs the on-site coordination of transportation emergencies for all unincorporated areas                                                                 |
| Local official  | • Performs on-site coordination of transportation emergencies for all incorporated areas                                                                 |
| TCEQ            | • Acts as lead state agency for spill response                                                                                                      |

*Note: TxDOT personnel will not intentionally handle, clean up, or otherwise come in contact with toxic or hazardous materials at accident sites.

**Spill Response Preparation**

As per TxDOT’s Maintenance Operations Manual, TxDOT maintenance office supervisors are responsible for:

- Ensuring state vehicles have a copy of the USDOT Emergency Response Guidebook;
- Maintaining updated emergency notification list, including telephone numbers for DPS, local law enforcement, fire department, district hazardous materials coordinator, and the TCEQ; and,
- Instructing employees to remain clear of accident areas contaminated with known or suspected toxic or hazardous materials.

TxDOT’s Emergency Response Standard Operating Procedure No. 15-04, which requires, among other things, that the ROW and MS4 be fully restored to its pre-existing condition. This normally includes repairing the infrastructure, replacing removed soil with clean acceptable fill, re-establishing the drainage system, and re-sodding the impacted area. In periods of dry weather, the contractor may be required to water the sod up to five weeks in order to establish the root system.

**2.2.7 Source Investigation and Elimination**

Data collected during several permit terms supports the conclusion that the majority of illicit discharges to TxDOT’s MS4 come from adjacent third-party MS4s. Given this information, TxDOT can better protect the quality of its MS4 by providing increased inspection of third-party outfalls within our ROW. Thus, TxDOT’s program to locate and eliminate illicit discharges and improper disposal to the MS4 will focus on third-party
outfalls. The program includes visual inspection (visual screening) to locate portions of the MS4 with suspected illicit discharges and improper disposal, along with the results of field test kits and laboratory analytical verification when warranted.

Outfalls with the potential to contribute high levels of pollutants to the MS4 (based on previous screening results, complaints, land use of others' adjacent MS4, physical evidence, or other factors) and in accordance with the procedures specified in Section 2.3.7 of this SWMP are screened. Follow-up activities to eliminate illicit discharges and improper disposal may be prioritized based on the magnitude and nature of the suspected discharge, sensitivity of the receiving water, or other relevant factors.

TxDOT requires the elimination of illicit discharges and improper disposal practices within the regulated area as expeditiously as possible. If the responsible party (RP) is identified, TxDOT will notify the RP that a proposed plan of action must be submitted to TxDOT within a reasonable amount of time depending on the situation (usually two weeks). In the interim, TxDOT requires the operator of the illicit discharge to take reasonable and prudent measures to minimize the discharge of pollutants to the MS4. Where elimination of an illicit discharge within 30 days is not possible, TxDOT will request an expeditious schedule for removal of the discharge.

Illicit discharges and disposal that originate from an adjacent MS4 will be addressed by notifying the appropriate local MS4 permittee within a reasonable time. If TxDOT does not agree with the corrective measure(s) and/or the time schedule, TxDOT will refer the case to the TCEQ for further action and/or enforcement.

2.2.8 Inspections

TxDOT does not have the legal authority to enforce state environmental laws against third parties. TxDOT will rely completely on the TCEQ or the local municipal government for law enforcement. Upon detection of a potential illicit connection, dumping, other illegal activity, or accident spills, TxDOT will investigate on-site and within the state ROW and then report the problem as appropriate.

2.2.9 Additional Requirements for Previous Phase I Permitted Areas

In addition to all the requirements described above, TxDOT will meet the following requirements in areas that previously were permitted under a Phase I permit.

a) Overflows and Infiltration – TxDOT will implement controls, where necessary and feasible, to address dry weather and wet weather overflows from sanitary sewers into the MS4s. TxDOT will limit the seepage from municipal sanitary sewers into the MS4s to the MEP.

b) List of discharges - TxDOT will maintain, and update as necessary, a list of discharges to the MS4 that have been issued an NPDES or a TPDES permit. The list will include the name, location and permit number of the discharger.
c) Hazardous Waste and Used Motor Vehicle Fluids

1) TxDOT prohibits the discharge or disposal of used motor vehicle fluids, hazardous wastes, and the intentional disposal of collected quantities of grass clippings, leaf litter, and animal wastes into the MS4s.

2) TxDOT will ensure the implementation of programs to collect used motor vehicle fluids (including, at a minimum, oil and antifreeze) and hazardous waste materials (including paint, solvents, pesticides, herbicides, and other hazardous materials) for recycling, reuse, or proper disposal. Such programs will be readily available to the permittee’s contractors and to the permittee’s employees and will be publicized and promoted on a regular basis.

d) Identification of Priority Areas – TxDOT will identify priority areas likely to have illicit discharges, document the basis for the selection of each priority area, and will create a list of all priority areas identified. This priority list will be available for review by the TCEQ.

e) Alternate Stormwater Assessment Program for Previous Phase I Permitted Areas

1) Alternate Dry Weather Screening Program – TxDOT will continue to screen and detect the presence of illicit connections and improper discharges from adjacent MS4s and illegal third parties discharges to the permittee's MS4. All areas that were permitted under the Phase I MS4 program (See Part II.A of Permit No. WQ0005011000) will continue to be screened as specified in the statewide SWMP at least once during the permit term.

2) Alternate Wet Weather Program – In previous Phase I permitted areas where TxDOT was responsible for outfall or watershed monitoring under the Wet Weather Characterization program, TxDOT will continue to evaluate the watershed using existing stormwater characterization data collected by reliable sources such as TCEQ, local river authorities, partnerships, and/or other local efforts as appropriate. The analysis and interpretation of this data will be submitted to TCEQ in the year 4 annual report. Previous Phase I areas under this requirement include: TxDOT Beaumont (WQ0004644000), City of San Antonio (WQ0004284000), TxDOT Austin (WQ0004645000), City of Houston (WQ0004685000), TxDOT Houston District (Pasadena) (WQ0004520000), City of Fort Worth (WQ0004350000), City of Arlington (WQ0004635000), and City of Dallas (WQ0004521000).
2.2.10 Additional Requirements for Previous TxDOT – Austin District Phase I Permit (WQ0004645000)

In addition to all the requirements described above, TxDOT Austin District will meet the following requirements in specific areas that previously were permitted under the TxDOT Austin-District Phase I permit.

Spill Prevention and Response – the TxDOT Austin District will continue to implement and improve, as necessary, programs that prevent, contain, and respond to spills that may discharge into the MS4. When cleanup of a ROW spill is necessary, the TxDOT Austin District will ensure the parties responsible for the spill take all reasonable steps to minimize or prevent any adverse effects to human health or the environment. The spill response programs may include a combination of spill response actions by the TxDOT (and/or another public entity), and legal requirements for private entities within the jurisdiction of TxDOT.

The TxDOT Austin District will address spills that originate from an adjacent MS4 by notifying the appropriate local MS4 entity within a reasonable time. If the TxDOT Austin District does not agree with the corrective measure(s) or the time schedule proposed by the adjacent MS4, the TxDOT Austin District will refer the case to the TCEQ for further action and or enforcement.

During emergency spill response, the TxDOT Austin District will provide support to the lead agency – Department of Public Safety, TCEQ, or local official during the containment and cleanup.

a) The TxDOT Austin District will continue to coordinate with the U.S. Fish & Wildlife Service to determine areas of concern for endangered karst invertebrates, submit a discussion of which, if any, existing and needed structures have been identified as potential projects to prevent spills from entering the aquifer, and report any coordination of projects identified with the U.S. Fish & Wildlife Service in the annual report.

b) If requested by the local jurisdiction, the TxDOT Austin District will install hazardous material route signs on hazardous material routes that, by the local jurisdiction’s Fire Chief and/or Local Emergency Planning Committee, are defined and established within the specific areas that previously were permitted under the TxDOT Austin-District Phase I permit area. The posting of hazardous material route signs will be done according to the TxDOT’s highway sign policies within the required areas of the permittee’s ROW.

2.3 Best Management Practices and Measurable Goals

TxDOT has implemented a program to locate and eliminate illicit discharges and improper disposals to the MS4. This program includes visual inspection/screening to locate portions of the MS4 with suspected illicit discharges and improper disposals, along with the results of field test kits and laboratory analytical verification when warranted. Screening points will be selected with an emphasis on those areas that may be contributing high levels of pollutants to the MS4 based on previous screening results, complaints, others' adjacent
MS4 land use, physical evidence, or other factors, and in accordance with the procedures specified in the SWMP.

2.3.1 **Program Development**

TxDOT will review and update as necessary, the SWMP and MCM implementation procedures required by Part III.A.2 of Permit No. WQ0005011000. Any changes will be reflected in the annual reports. Any updated written procedures to the SWMP will be forwarded to and maintained at the district offices.

2.3.2 **Allowable Non-Stormwater Discharges**

TxDOT will update its list of Allowable Non-Stormwater Discharges (see Attachment D), as necessary. If changes are made to the list, those changes will be included in the current reporting year annual report.

2.3.3 **MS4 Areas Mapping**

An information management system for data, the AOTS, was developed to compile a storm sewer outfall map that contains the elements required under the MS4 permit. AOTS is a web-based tool with a central storage database that maintains TxDOT field-collected and desktop related outfall and crossing point data. The AOTS allows for storage of data associated with field inspections, follow-up investigations, and third-party notifications. The stored outfall and crossing point GIS map, together with the corresponding attributes and inspection data is available via an Internet website. The website is broken down into a Map Viewer and Data Manager. Overall, the website provides dynamic mapping capabilities and near real-time tracking information related to TxDOT outfalls across the entire state of Texas.

The AOTS map will be updated with new and relocated outfalls on an annual or ongoing basis. Updated maps will be included in the annual report to TCEQ.

TxDOT will include on the AOTS map the location and name of all surface waters receiving discharges from all the MS4 outfalls and include this in the annual report.

TxDOT maps, updates, and completes the MS4 mapping using the schedule detailed in Table 2.1 of Section 2.4 below. TxDOT will focus its screening efforts on the following:

- Issues identified during the initial screening/mapping process are followed up on an individual basis;
- Routine inspection and maintenance of ditches, outfalls, and other roadway appurtenances include an IDDE check, and noted issues will be followed up on an individual basis;
- Spills and complaints will be followed up on an individual basis; and,
- TxDOT will map the location and name of all surface waters receiving discharges from their MS4 outfalls.
2.3.4 Education and Training

Specific emphases on educating and training TxDOT personnel are important and integral aspects of the program. Many pollution problems can be avoided by having an informed population willing to participate in improving stormwater quality. TxDOT will utilize the following existing programs to meet our education and training requirements:

- Training classes to facilitate the proper management and disposal of used oil and potentially hazardous materials;
- Appropriate educational and training guidelines for TxDOT planners, highway designers, construction and maintenance personnel; and,
- Mandated EMS classes for construction and maintenance personnel and managers.

TxDOT will report the number of permit year TxDOT staff and contractor employees that received training in the annual report.

2.3.5 Public Reporting of Illicit Discharges and Spills

TxDOT will utilize the “Don’t Mess With Texas Water” reporting system and the TxDOT Stormwater Webpage complaint page for receiving reports related to illicit discharges and spills.

TxDOT will report the number calls and complaint forms received during the reporting year in the annual report. Response to public reporting will be included in the annual report as well.

2.3.6 Spill Prevention and Response

TxDOT will respond to complaints of spills and unauthorized discharges that occur within TxDOT’s regulated area. TxDOT contracts with professional HAZMAT service teams to respond to a spill in the event the RP is not willing or able to respond to the spill in a timely manner. The TxDOT Hazmat service team is contractually required to be on site within ninety (90) minutes after being informed about an incident. TxDOT tracks the number of spills occurring within the ROW, the amount of material disposed of in a properly classified landfill, and the cost of disposal and cleanup. Collisions of automobiles might result in small spills of organic liquids, but those are unlikely to have an impact on water bodies. Spills from a freight transport or fuel delivery truck, such as liquid or solid cargo, could pose a temporary adverse impact on a water body, and TxDOT responds expeditiously to accidents that result in spills of liquid or solid cargo.

Spills that originate from an adjacent MS4, will be addressed by notifying the appropriate local MS4 permittee within a reasonable time. If TxDOT does not agree with the corrective measure(s) and/or the time schedule, TxDOT will refer the case to the TCEQ for further action and/or enforcement.

TxDOT will report the quantity of spills responded to during the reporting year in the annual report. The report will also include, if available, the RP, the volume of the spill, and associated cost of the response.
2.3.7 Source Investigation and Elimination

TxDOT will visually observe the MS4 regulated area during daily operations in order to identify the presence of illicit discharges and/or illicit connections, typically originating from third-party dischargers. If illicit discharges or illicit connections are identified, TxDOT has a procedure to perform the illicit discharge/connection inspection, field data collection and tracking system that will apply to observed discharges or illicit connections. Field procedures for screening are illustrated in Figure 2.1 and contained in TxDOT ENV ITEM 303 MS4 Dry Weather Screening (Performed only in previously permitted Phase I areas, see section 2.3.9 below), Outfall Mapping and Illicit Discharge Detection & Elimination (IDDE) Program, (see Attachment E). Field procedures for mapping are contained in TxDOT ENV ITEM 340 Global Positioning System (GPS) Data Collection and Processing Procedures for MS4 Outfall Mapping, Attachment F.

In addition to utilizing the available resources listed above, TxDOT will perform Site-Specific Monitoring when conditions warrant. Site-Specific Monitoring will occur through increased IDDE inspections and will follow specific TxDOT protocols. Existing TxDOT protocols utilize specific procedures, such as flow diagrams and associated reference tables, for IDDE inspection personnel to use in the field. Current flow diagrams and reference tables for IDDE inspections are presented with Figure 2.1 at the end of this section.

2.3.8 Inspections

In the event that a possible illicit discharge is identified, TxDOT will investigate the flow upstream to the extent of TxDOT property. TxDOT will report flows originating off state ROW to the appropriate RP or the adjacent MS4 operator within 48 hours of discharge confirmation for further action. In the event the flow appears to create a hazard or contain toxic or noxious substances, TxDOT will report the flow to the TCEQ. TxDOT has an “Interagency Cooperation Contract” between TCEQ and TxDOT that is intended to mitigate potential pollutant discharges to surface waters and to environmentally sensitive areas.

Process:

1. Notify adjacent landowner upon detection to mitigate illicit discharge and/or illicit connection;

2. If adjacent landowner does not cooperate, notify the adjacent MS4 operator within the time period established above; and/or

3. Notify TCEQ if the adjacent MS4 operator does not respond in a timely manner.

Attachment C includes TCEQ regional offices to contact should TCEQ notification be required.

TxDOT will report the number of inspections performed during the reporting year in the annual report. The report will also include, if available, the RP if found, the cost if available, and who the incident was turned over to for enforcement.
2.3.9 Additional Requirements for Previous Phase I Permitted Areas

Overflows and Infiltration – TxDOT utilizes a utility permit process with intent to regulate the location, design and methods for installation and adjustment of sanitary sewer and other utility lines on state-controlled highways.

TxDOT will report the number of utility permits issued during the reporting year in the annual report.

List of Dischargers – TxDOT will update its list of dischargers, as necessary. If changes are made to the list, those changes will be included in the current reporting year annual report.

Hazardous Waste and Used Motor Vehicle Fluids - TxDOT will indicate how it promoted, on a regular basis, the collection of hazardous waste and used motor oil to contractors and TxDOT employees during the reporting year in the annual report.

Identification of Priority Areas - TxDOT will create and update its list of Priority Areas, as necessary. If changes are made to the list, those changes will be included in the current reporting year annual report.

Dry Weather Screening Program – TxDOT will continue to screen and detect the presence of illicit connections and improper discharges from adjacent MS4s and illegal third-party discharges to the MS4. All areas that were permitted under the Phase I MS4 program will continue to be screened as specified in Section 2.2.1 at least once during the permit term. Each District that had a previously issued Phase I permit is required to continue performing dry weather inspections on outfalls within the previously permitted Phase I areas. Dry weather screening of outfalls is not required in the Phase II designated areas. Dry weather screening will typically be performed by contractors.

TxDOT will report the number dry weather inspections performed during the reporting year in the annual report.

Wet Weather Program – In previous Phase I permitted areas where TxDOT was responsible for outfall or watershed monitoring under the Wet Weather Characterization program, TxDOT will continue to evaluate the watershed using existing stormwater characterization data collected by reliable sources such as TCEQ, local river authorities, partnerships, and/or other local efforts as appropriate. Previous Phase I areas under this requirement include: TxDOT Beaumont (WQ0004644000), City of San Antonio (WQ0004284000), TxDOT Austin (WQ0004645000), City of Houston (WQ0004685000), TxDOT Houston District (Pasadena) (WQ0004520000), City of Fort Worth (WQ0004350000), City of Arlington (WQ0004635000), and City of Dallas (WQ0004521000).

TxDOT will include the Wet Weather Analysis in the year four annual report.
2.3.10 Additional Requirements for Previous TxDOT – Austin District Phase I Permit (WQ0004645000)

**Spill Prevention and Response** – TxDOT will continue to implement and improve, as necessary, programs that prevent, contain, and respond to spills that may discharge into the MS4. When cleanup of a ROW spill is necessary to prevent loss of life, personal injury, or severe property damage, TxDOT will ensure the parties responsible for the spill take all reasonable steps to minimize or prevent any adverse effects to human health or the environment, as specified in Section 2.3.6 above.

TxDOT will address spills that originate from an adjacent MS4 by notifying the appropriate local MS4 entity within a reasonable time, typically 48 hours. If TxDOT does not agree with the corrective measure(s) or the time schedule proposed by the adjacent MS4, the permittee will refer the case to TCEQ for further action and/or enforcement.

During emergency spill response, TxDOT will provide support to the lead agency, the Department of Public Safety, TCEQ, or other local official during the containment and cleanup.

Spill response in the Austin District is included in the annual report from Section 2.3.6 above.

**Agency coordination** - TxDOT will continue to coordinate with the U.S. Fish & Wildlife Service to determine areas of concern for endangered karst invertebrates, submit a discussion of which, if any, existing and needed structures have been identified as potential projects to prevent spills from entering the Edwards Aquifer, and report any coordination of projects identified with the U.S. Fish & Wildlife Service in the annual report.

If requested by the local jurisdiction, TxDOT will install hazardous material route signs on hazardous material routes that, by the local jurisdiction’s Fire Chief and/or Local Emergency Planning Committee, are defined and established within the specific areas that previously were permitted under the TxDOT Austin-District Phase I permit area. The posting of hazardous material route signs will be done according to TxDOT’s highway sign policies within the required areas of the ROW within the TxDOT MS4. Again, this activity will only be performed in the Austin District.

TxDOT will report any agency coordination conducted during the reporting year in the annual report.
## 2.4 BMP Implementation Schedule, Activity, and Measurable Goals

### Table 2.1

<table>
<thead>
<tr>
<th>Permit Year/Month</th>

### ADDITIONAL REQUIREMENTS FOR PREVIOUS TxDOT – AUSTIN DISTRICT PHASE I PERMIT (WQ0004645000) ONLY

- Annually/Aug 2.3.10.a-Spill Prevention and Response: Continue to implement and improve, as necessary, programs that prevent, contain, and respond to spills that may discharge into the MS4. Spill response in the Austin District is already included in the annual report from Section 2.3.6 above. Compass Function Codes 520, 830.
- Annually/Aug 2.3.10.b-Agency coordination: Coordinate with the U.S. Fish & Wildlife Service to determine areas of concern for endangered karst invertebrates. Report any agency coordination conducted during the reporting year in the annual report.
Figure 2.1 - Texas Department of Transportation (TxDOT)
Outfall Field Inspection Work Flow Diagram and Classification Scheme

START

Make physical observations.

Does the outfall have flow?

NO

UNLIKELY ILICIT DISCHARGE

NO (See Table 2.3)

YES

Measure flow, and measure field water chemistry if necessary.

Do observations suggest an illicit discharge?

NO

POTENTIAL ILICIT DISCHARGE

YES (See Table 2.4)

NO

Are laboratory water samples necessary for collection?

YES

Collect water samples for laboratory analysis.

NO

UNLIKELY ILICIT DISCHARGE

SUSPECT ILICIT DISCHARGE

NO

Does water chemistry or physical observations suggest an illicit discharge?

YES

OBVIOUS ILICIT DISCHARGE

NO

(See Table 2.4)

(See Table 2.4)

NO
Following the flow chart above, when TxDOT field inspection personnel encounter a potential illicit discharge, whether it is in dry weather or wet weather conditions or it is from an established outfall or discharging into the MS4, they begin by assessing the physical parameters presented in Tables 2.2, 2.3, 2.4, and 2.5 below. The following activities may be performed by "TxDOT Qualified Personnel" and/or contractor.

In addition, when it is not evident that the flow/discharge is an acceptable non-stormwater discharge as defined by the permit and this SWMP, a field water chemistry sample is collected and screened using an approved stormwater test kit such as a Lamotte Stormwater Field Laboratory Analysis Kit. If levels of the established potential pollutants exceed the levels in Table 2.3 below, field inspection personnel are required to obtain a water sample, using proper chain-of-custody and preservation procedures, for laboratory analysis at a NELAC accredited laboratory.

Laboratory water chemistry analysis is performed on the following parameters:

- Ammonia_Nitrogen
- Detergent (surfactants)
- E.Coli
- Coliforms, fecal
- pH
- Copper, Total
- Phenols
- Oil and Grease
- Total Petroleum Hydrocarbon

The results of the IDDE field and laboratory chemistry analysis will be tabulated and presented in a database/spreadsheet format for comparison with other available monitoring databases, and a comprehensive database will be provided in the TxDOT MS4 Statewide Year four annual report.

TxDOT will investigate the potential source of and mitigate the detected pollutant(s) to the extent practicable.

TxDOT reports the number of source investigations performed and eliminated during the reporting year in Section 2.3.8.

</table>
3.0 MCM 3 - CONSTRUCTION SITE STORMWATER RUNOFF CONTROL

3.1 Permit Requirements

(a) Requirements and Control Measures

The permittee shall continue to develop, implement and enforce a program requiring the permittee’s small and large construction activities, as defined in Part I of this permit, to select, install, implement, and maintain stormwater control measures that prevent illicit discharges to the MEP. The program must include the development and implementation of a regulatory mechanism, as well as sanctions to ensure compliance to the extent allowable under state, federal, and local law, to require erosion and sediment control.

The permittee shall assess program elements that were described in the previous permits, modify as necessary, and develop and implement new elements, as necessary, to continue reducing the discharge of pollutants from the MS4 to the MEP. New elements and all elements in newly regulated Phase II MS4 areas must be fully implemented by the end of this permit term.

If TCEQ waives requirements for stormwater discharges associated with small construction from a specific site(s), the permittee is not required to enforce the program to reduce pollutant discharges from such site(s).

(b) The permittee shall review and update as necessary, the statewide SWMP and MCM implementation procedures required by Part III.A.2. Any changes must be included in the statewide annual reports. Such written procedures must be maintained on site or in the SWMP and made available for inspection by the TCEQ.

(c) The permittee shall continue to require that its construction sites include implementation of appropriate erosion and sediment control BMPs. The permittee’s construction program must ensure the following minimum requirements are effectively implemented for all small and large construction activities discharging to its MS4.

(1) Erosion and Sediment Controls - Design, install and maintain effective erosion controls and sediment controls to minimize the discharge of pollutants from construction sites.

(2) Soil Stabilization - Stabilization of disturbed areas must, at a minimum, be initiated immediately whenever any clearing, grading, excavating, or other earth disturbing activities have permanently ceased on any portion of the site, or temporarily ceased on any portion of the site and will not resume for a period exceeding 14 calendar days. Stabilization must be completed as soon as practicable, but no more than 14 calendar days after the initiation of soil stabilization measures except as provided in a. through d. below:

   a. Where the immediate initiation of stabilization measures after construction activity temporarily or permanently ceased is precluded by snow cover or
frozen ground conditions, stabilization measures must be initiated as soon as practicable.

In arid, semiarid, and drought-stricken areas, where initiating vegetative stabilization measures immediately is infeasible, alternative stabilization measures must be employed as soon as practicable. Where vegetative controls are not feasible due to arid conditions, the permittee shall immediately install, and within 14 calendar days of a temporary or permanent cessation of work in any portion of the site complete, non-vegetative erosion controls. If non-vegetative controls are not feasible, the permittee shall install temporary sediment controls as required in item c. below.

c. In areas where temporary stabilization measures are infeasible, the permittee may alternatively utilize perimeter controls. The permittee shall document in a stormwater pollution prevention plan (SWP3) the reason why stabilization measures are not feasible, and must demonstrate that the perimeter controls will retain sediment on site to the extent practicable.

d. If the initiation or completion of vegetative stabilization is affected by circumstances beyond the control of the permittee, vegetative stabilization must be initiated or completed as soon as conditions or circumstances allow it on the site. The requirement to initiate stabilization is triggered as soon as it is known with reasonable certainty that work will be stopped for 14 or more additional calendar days.

(3) BMPs – Design, install, implement, and maintain effective BMPs to minimize the discharge of pollutants to the MS4. At a minimum, such BMPs must be designed, installed, implemented, and maintained to:

a. Minimize the discharge of pollutants from equipment and vehicle washing, wheel wash water, and other wash waters;

b. Minimize the exposure of building materials, building products, construction wastes, trash, landscape materials, fertilizers, pesticides, herbicides, detergents, sanitary waste, and other materials present on the site to precipitation and to stormwater; and

c. Minimize the discharge of pollutants from spills and leaks.

(4) As an alternative to (1) through (3) above, the permittee shall ensure that all small and large construction activities discharging to its MS4 have developed and implemented a SWP3 in accordance with the TPDES CGP TXR150000.

(d) Prohibited Discharges - The following discharges are prohibited:

(1) Wastewater from washout of concrete and wastewater from water well drilling operations, unless managed by an appropriate control;

(2) Wastewater from washout and cleanout of stucco, paint, from release oils, and other construction materials;
(3) Fuels, oils, or other pollutants used in vehicle and equipment operation and maintenance;

(4) Soaps or solvents used in vehicle and equipment washing; and

(5) Discharges from dewatering activities, including discharges from dewatering of trenches and excavations, unless managed by appropriate BMPs.

(e) Construction Plan Review Procedures

To the extent allowable by state, federal, and local law, the permittee shall continue to maintain and implement site plan review procedures that describe which plans will be reviewed as well as when an operator may begin construction. This requirement is limited to those sites operated by the permittee and its contractors and located within the permittee’s regulated area. The site plan procedures must meet the following minimum requirements:

(1) The site plan review procedures must incorporate consideration of potential water quality impacts.

(2) The permittee may not approve any plans, unless the plans contain appropriate site specific construction site control measures that, at a minimum, meet the requirements described in Part III.B.3.(a) or in the TPDES CGP TXR150000.

The permittee may require and accept a plan, such as a SWP3, that has been developed pursuant to the TPDES CGP TXR150000.

(f) Construction Site Inspections and Enforcement

To the extent allowable by state, federal, and local law, the permittee shall continue to implement procedures for inspecting large and small construction projects. At a minimum, the permittee shall conduct inspections of sites operated by the permittee or its contractors and that are located in the permittee’s regulated area.

(1) Inspections must occur at a frequency determined by the permittee, based on the evaluation of factors that are a threat to water quality, such as: soil erosion potential; site slope; project size and type; sensitivity of receiving waterbodies; proximity to receiving waterbodies; non-stormwater discharges; and past record of non-compliance by the operators of the construction site.

(2) Inspections must occur during the active construction phase.

a. The permittee shall develop, implement, and revise as necessary, written procedures outlining the inspection and enforcement requirements. These procedures must be maintained at the permittee’s district office and in the statewide SWMP and be made available to TCEQ.

b. Inspections of construction sites must, at a minimum:

   (i) Determine whether the site has appropriate coverage under the TPDES CGP TXR150000. If no coverage exists, notify the contractor or the permittee’s own construction site operator of the need for permit coverage.
(ii) Conduct a site inspection to determine if control measures have been selected, installed, implemented, and maintained according to the permittee’s requirements.

(iii) Assess compliance with the permittee’s standards, permit, policy etc.

(iv) Provide a written or electronic inspection report.

c. Based on site inspection findings, the permittee shall take all necessary follow-up actions (for example, follow-up-inspections or enforcement) to ensure compliance with permit requirements and the SWMP. These follow-up and enforcement actions must be tracked and maintained for review by the TCEQ.

If necessary, the permittee shall notify the adjacent MS4 operators with enforcement authority or the TCEQ Program Support Section according to Part III.A.3(c).

(g) Information submitted by the Public

The permittee shall develop, implement and maintain procedures for receipt and consideration of information submitted by the public.

(h) MS4 Staff Training

The permittee shall ensure that all staff whose primary job duties are related to implementing the construction stormwater program (including permitting, plan review, construction site inspections, maintenance, and enforcement) are informed or trained to conduct these activities. The training may be conducted by the permittee or by outside trainers.

(i) Additional Requirements for Previous Phase I Permitted Areas

In addition to all the requirements described above, the permittee shall meet the following requirements in areas that previously were permitted under a Phase I permit.

(1) List of Sites - The permittees shall maintain a current list of construction sites that discharge directly to the MS4 and that have been issued an NPDES or a TPDES permit. The list must include the name, location and permit number of the discharges that have been authorized under an NPDES or TPDES stormwater discharges permit for construction activities (if known).

(2) Education and training – The permittee shall assure appropriate education and training measures for construction site operators.
3.2 Program Overview

TxDOT’s construction stormwater program has been developed and implemented to reduce the discharge of pollutants into the MS4 from construction sites, and provide enforcement for both small and large construction sites. The program includes:

- Requirements for design, development, and implementation of appropriate control measures to reduce pollutants discharged into the MS4 from construction sites;
- Construction plan review process using Checklists;
- Inspection of construction sites and enforcement of contract and CGP provisions pertaining to construction site stormwater runoff; and,
- Appropriate education and training measures for construction site operators.

3.2.1 Requirements and Control Measures

TxDOT will assess program elements that were described in the previous permits, modify as necessary, and develop and implement new elements, as necessary, to continue reducing the discharge of pollutants from its MS4 to the MEP. New elements and all elements in newly regulated Phase II MS4 areas will be fully implemented by the end of this permit term.

If TCEQ waives requirements for stormwater discharges associated with small construction from a specific site(s), TxDOT is not required to enforce the program to reduce pollutant discharges from such site(s).

3.2.2 SWMP Update

TxDOT will review and update as necessary the SWMP and MCM implementation procedures required by Part III.A.2 of Permit No. WQ0005011000. Any changes will be reflected in the annual reports. Such written procedures will be maintained at the district offices and in the SWMP and made available for inspection by the TCEQ.

3.2.3 Implementation of Erosion and Sediment Control BMPs

TxDOT will ensure that all small and large construction activities discharging to its MS4 have developed and implemented a SWP3 in accordance with the TPDES CGP TXR150000. The MS4 permit meets the requirements in the CGP; therefore, by maintaining compliance with the CGP, the MS4 permit requirements are met. In addition, TxDOT construction projects that require CGP authorization will comply with the permit requirements. TxDOT’s policy is to design, implement, and install appropriate practices and BMPs for soil disturbing activity where a potential for stormwater discharges exists, regardless of the type of activity or acreage disturbed. The TxDOT project plans include a Stormwater Pollution Prevention Plan (SWP3) that defines BMPs to control sedimentation and erosion. TxDOT reviews and approves the SWP3 on its construction projects.

TxDOT will ensure that construction sites within its MS4 design, install, implement, and maintain effective BMPs to minimize the discharge of pollutants to the TxDOT MS4. At a minimum, TxDOT’s BMPs are designed, installed, implemented and maintained to:
1) Minimize the discharge of pollutants from equipment and vehicle washing, wheel wash water, and other wash waters;

2) Minimize the exposure of building materials, building products, construction wastes, trash, landscape materials, fertilizers, pesticides, herbicides, detergents, sanitary waste and other materials present on the site to precipitation and to stormwater; and,

3) Minimize the discharge of pollutants from spills and leaks.

The Environmental Permits, Issues, and Commitments (EPIC) sheet provides an overview of environmental requirements contained within the project plans.

Project construction plans are reviewed and approved by TxDOT before the project moves forward in the Advance Planning & Development Department, which also reviews the plans, specification and estimate processes prior to construction.

Stormwater awareness training is required for employees that conduct soil-disturbing activities.

As part of the EMS program, projects that let after January 1, 2016 require both TxDOT and the contractor to submit an NOI for each project that disturbs one or more acres. TxDOT is the primary operator with control over constructions plans and specifications. The contractor is the primary operator with day-to-day operational control. Projects that let prior to January 1, 2016 require that the contractor sign a Contractor Certification of Compliance with Storm Water Requirements form 2458.

At TxDOT's CGP permitted construction sites a Construction Site Notice (CSN) is posted. These notices are posted in a location accessible to the public and contain a phone number for the public to submit information regarding the site. Comments received from the public will be considered by the district engineer or another responsible TxDOT representative.

Some routine maintenance activities completed by TxDOT do not require authorization under the CGP including activities performed to maintain the original line and grade; hydraulic capacity and original purpose of a ditch, channel, or other similar stormwater conveyance; the routine grading of existing dirt roads; and asphalt overlays of existing roads; shoulder blading to restore the shoulder to its original condition; and pavement "reworking" operations if they stay within the limits of the original pavement and do not expose the base or sub-grade. If the sub-grade is exposed or if previously undisturbed land is disturbed (for example, clearing for staging areas or temporary haul roads), coverage under the CGP could be required.

### 3.2.4 Prohibited Discharges

The following discharges are prohibited:

1) Wastewater from washout of concrete and wastewater from water well drilling operations, unless managed by an appropriate control;
2) Wastewater from washout and cleanout of stucco, paint, from release oils, and other construction materials;

3) Fuels, oils, or other pollutants used in vehicle and equipment operation and maintenance;

4) Soaps or solvents used in vehicle and equipment washing; and,

5) Discharges from dewatering activities, including discharges from dewatering of trenches and excavations, unless managed by appropriate BMPs.

### 3.2.5 Construction Plan Review Procedures

At the pre-construction meeting, TxDOT will notify the Contractor of their TPDES permitting responsibilities associated with construction activities, as appropriate.

Utility contractors that are working within the ROW must first provide a Utility Installation Request form, and obtain approval prior to commencing those construction activities. The approval form requires the requestor to comply with the Clean Water Act (for example, obtain TPDES general permit TXR150000) to develop BMPs to minimize erosion, and to revegetate the project area. Attachment G contains a Utility Installation Request Form.

TxDOT will implement the CGP in accordance with TxDOT’s plans and specifications on all projects. When TxDOT is discharging to another MS4, if the local jurisdiction has a SWMP requirement that vary(s) from TxDOT plans and specifications, TxDOT will make every effort to reach a mutually acceptable solution.

### 3.2.6 Construction Site Inspections and Enforcement

By statute, TxDOT has the power to control virtually all of the activities occurring within the ROW, but there is little, if any, authority to regulate discharges occurring off the ROW and flowing into state maintained drainage systems. The codification of state law in the rules of the Texas Administrative Code (TAC - Title 43, Part 1, Chapter 21, Subchapter C) gives TxDOT the power to construct, maintain, and operate a drainage system for state highways to accommodate stormwater, which originates within and reaches highway ROWs. TxDOT contracts with others for the construction and sometimes for the maintenance of these systems. As such, contracting is the primary control for enforcement.

TxDOT evaluates the stormwater control measures specified in the SWP3. TxDOT has created a "Stormwater Field Inspector's Guide" to assist TxDOT inspectors with identifying any infrastructure stormwater device deficiencies. The guide provides design criteria for each device, as well as repair procedures and when maintenance should be scheduled. Sediment will be removed from devices and damaged devices repaired as required by the contract and the CGP.

TxDOT implements the EMS for all construction project sites that disturb one acre or more of land. The EMS is TxDOT's commitment to improve environmental compliance performance at road construction sites across the state. As part of this effort, TxDOT has developed a number of tools, training opportunities, management practices and compliance
requirements for all affected TxDOT personnel, consultants, contractors, and other participants in TxDOT’s road construction operations. Attachment H contains EMS Stage Gate checklists.

### 3.2.7 Information Submitted by the Public

TxDOT utilizes public input (for example, the opportunity for public comment or public meetings) in the implementation of the MS4 program through the Transportation Improvement Program (TIP) or Statewide Transportation Improvement Program (STIP). If a public meeting is held, a citizen advisory committee is formed, or a similar public function is established to allow the public an opportunity to participate in transportation development and the associated SWMP implementation. TxDOT will comply with all applicable state and local public notice requirements for the activity.

TxDOT also maintains a stormwater web page for reporting spills and illegal dumping, and can be found at [http://www.txdot.gov/contact-us/form.html?id=swp-email](http://www.txdot.gov/contact-us/form.html?id=swp-email).

### 3.2.8 MS4 Staff Training

Prior to initiation of construction, the contractor will meet with the TxDOT Area Engineer (AE) in a pre-construction meeting to discuss stormwater issues for the construction site. TxDOT will ensure contractors are aware of practices and policies identified in this section, as well as emphasize the need for compliance.

Contractor training requirements are described in Special Provision 506-003, Section 506.3.3 for the CRPE, CRPE Alternate, Contractor Superintendent, etc. TxDOT and contractor training requirements are described in the EMS training matrix (see Attachment B).

### 3.2.9 Additional Requirements for Previous Phase I Permitted Areas

In addition to the requirements described above, TxDOT will meet the following requirements in areas that previously were permitted under a Phase I permit.

1) List of sites - TxDOT will maintain a current list of non-TxDOT construction sites that discharge directly to the MS4 and that have been issued an NPDES or a TPDES permit. The list will include the name, location and permit number of the discharges that have been authorized under an NPDES or TPDES stormwater discharges permit for construction activities (if known). The list will be generated from the submission of NOIs received from dischargers.

2) Education and training - TxDOT will assure appropriate education and training measures are provided for construction site operators.

### 3.3 Best Management Practices and Measurable Goals

Utilizing the following BMPs, TxDOT will ensure that all small and large construction activities discharging to its MS4 are in accordance with the TPDES CGP TXR150000.
3.3.1 Requirements and Control Measures

TxDOT will fully implement all applicable new elements and all applicable elements in newly regulated Phase II MS4 areas by the end of the current permit term. All new elements and elements in newly regulated Phase II areas completed will be included in the Annual report in the reporting year accomplished.

3.3.2 SWMP Update

TxDOT will review and update as necessary, the SWMP and MCM implementation procedures required by Part III.A.2 of Permit No. WQ0005011000. Any changes will be reflected in the annual reports. Any updated written procedures to the SWMP will be forwarded to and maintained at the district offices.

3.3.3 Implementation of Erosion and Sediment Control BMPs

All TxDOT construction projects within the ROW, with NOIs or CSNs, comply with the CGP, TxDOT Standard Specification 2014, and EMS. TxDOT ensures MS4 compliance through monitoring, inspections, and enforcement.

As stated previously, for projects let after January 1, 2016 TxDOT is the primary operator with control and responsibility over construction plans and specifications. The TxDOT contractor is the primary operator with operational control over day-to-day activities at the construction site and is responsible for ensuring that the SWP3 and other permit conditions are in compliance. Having both TxDOT and the contractor as primary operator on construction sites supports partnership for environmental compliance. Projects that let prior to January 1, 2016 require that the contractor sign a Contractor Certification of Compliance with Storm Water Requirements (Form 2458).

The DEQC conducts construction joint inspections with the TxDOT inspector and the contractor CRPE. The inspections verify that the contractor has correctly installed and maintained BMPs per the SWP3 site map and per TxDOT specifications. The joint inspection allows the opportunity for the DEQC to provide training and feedback as appropriate. The DEQC uses TxDOT Form 2448 for these inspections.

TxDOT will maintain the quantity of Form 2458, for construction sites let prior to January 1, 2016, and the number of Form 2448 for all other sites, completed during the permit year and include this quantity in the annual report for the applicable reporting year.

3.3.4 Prohibited Discharges

TxDOT will update its list of Prohibited Discharges, as necessary. If changes are made to the list, those changes will be included in the current reporting year annual report.

3.3.5 Construction Plan Review Procedures

Prior to initiation of construction, the contractor will meet with TxDOT representatives in a preconstruction conference to discuss stormwater issues for the construction site. TxDOT will ensure contractors are aware of practices and policies identified in this section, as well as emphasize the need for compliance. TxDOT will also
notify the site operator of its TPDES permitting responsibilities associated with construction activities, as appropriate. A pre-conference form is used to document the meeting. An example of this form is included in Attachment I.

TxDOT conducts a preconstruction meeting with the contractor prior to commencement of construction activities that includes an environmental agenda of the project environmental requirements. Reviewing the environmental requirements for the project in the preconstruction meeting ensures understanding by all responsible parties. In addition, the contractor assigns their contractor responsible person environmental (CRPE) who is responsible for ensuring the contractor training is complete, performing daily monitoring of BMPs, and participating in joint District Environmental Quality Coordinator (DEQC) inspections with the TxDOT DEQC.

TxDOT will track the number of pre-conference forms obtained during the permit year and include this number in the annual report.

### 3.3.6 Construction Site Inspections and Enforcement

TxDOT construction projects that disturb one or more acres of land will comply with the CGP, TxDOT Standard Specification 2014, and TxDOT EMS policy. The DEQC performs inspections of the construction project sites to verify compliance and takes enforcement action as necessary to ensure compliance.

The CRPE monitors the construction site BMPs daily and if necessary takes action to ensure compliance with the CGP, TxDOT Standard Specification 2014, EMS and other environmental requirements.

The TxDOT inspector performs SWP3 inspections (TxDOT Form 2118) on project sites every 7 days, or once every 14 days and within 24 hours after 0.5 inches or more of rainfall. Each District decides which of these two intervals is most appropriate for their District. TxDOT works with the contractor on necessary corrective action, maintenance, or need for additional controls as a result of the inspection. The enforcement and escalation procedures are provided in the instructions on the Form, and through TxDOT training on the completion of the Form.

The DEQC conducts joint Construction Stage Gate Checklist (CSGC) inspections with the CRPE and TxDOT inspector that occur at minimum within one month of beginning initial construction activities and annually, or if the project is less than one year when 50% of work has been completed. The DEQC conducts annual inspections of construction projects using the CSGC Forms 2448 and 2458 to verify BMPs have been correctly installed and maintained. The annual DEQC inspection may be used in place of the joint CSGC inspection if both the CRPE and TxDOT inspector are present and involved during inspection. Frequency for completing additional CSGC inspections by TxDOT and the contractor CRPE is determined at the preconstruction meeting.

TxDOT will obtain the number of CSGC Forms 2448 and 2458 obtained during the permit year and include this number in the annual report.
3.3.7 **Information Submitted by the Public**

TxDOT will report the number of construction complaint calls and complaint forms received during the reporting year in the annual report.

3.3.8 **MS4 Staff Training**

TxDOT staff and contractor training requirements are described in Special Provision 506-003, Section 506.3.3 for the CRPE, CRPE Alternate, Contractor Superintendent, etc., TxDOT and contractor training requirements are described in the EMS training matrix in Attachment B.

TxDOT will provide the number of TxDOT staff and contractors that participated in Special Provision 506-003, Section 506.3.3 for the CRPE, CRPE Alternate, Contractor Superintendent, etc, and EMS training modules during the reporting year in the annual report.

3.3.9 **Additional Requirements for Previous Phase I Permitted Areas**

TxDOT will maintain a list of current non-TxDOT construction sites active during the permit year and reported to TxDOT, including the name, location and permit number of the discharges that have been authorized under an NPDES or TPDES stormwater discharge permit for construction activities. TxDOT will only report those received from dischargers. TxDOT will include this list in the annual report.

Education and training of construction site operators will be included with Section 3.3.8 and not reported as a separate number, as that list will already include the number receiving education and training.

4.0 MCM 4 - POST-CONSTRUCTION STORMWATER MANAGEMENT IN AREAS OF NEW DEVELOPMENT AND REDEVELOPMENT

4.1 Permit Requirements

(a) The permittee shall continue to develop, implement and enforce a program, to the extent allowable under state, federal, and local law, to control stormwater discharges from new development and redeveloped sites that disturb one acre or more, including projects that disturb less than one acre that are part of a larger common plan of development or sale that discharge into the MS4. The program must be established for private (if any) and public development sites. The program may utilize an offsite mitigation and payment in lieu of components to address this requirement.

The permittee shall **assess program elements that were described in the previous permit**, modify as necessary, to continue reducing the discharge of pollutants from the MS4 to the MEP. New elements and all elements in newly regulated areas must be fully implemented by the end of the permit term.

(b) The permittee shall use, to the extent allowable under state, federal, and local law and local development standards, an ordinance or other regulatory mechanism to address post-construction runoff from new development and redevelopment projects. The permittee shall establish, implement, and enforce a requirement for its contractors and its own departments that develop and redevelop sites to design, install, implement, and maintain a combination of structural and non-structural BMPs appropriate for the community and that protects water quality. If the construction of permanent structures is not feasible due to space limitations, health and safety concerns, cost effectiveness, or highway construction codes, the permittee may propose an alternative approach to TCEQ. Newly regulated areas must have the program element fully implemented by the end of the permit term.

(c) The permittee shall review and update as necessary, the statewide SWMP and MCM implementation procedures required by Part III.A.2. Any changes must be reflected in the statewide annual reports. Such written procedures must be maintained at the permittee’s district office and in the SWMP and made available for inspection by TCEQ.

(d) The permittee shall document and maintain records of enforcement actions and make them available for review by the TCEQ.

(e) The permittee shall, to the extent allowable under state, federal, and local law, continue to ensure the long-term operation and maintenance of structural stormwater control measures owned and operated by the permittee.
4.2 Program Overview

TxDOT will continue to develop, implement and enforce a program, to the extent allowable under state, federal, and local law, to control stormwater discharges from new development and redeveloped sites that disturb one acre or more, including projects that disturb less than one acre that are part of a larger common plan of development or sale. The program has been established for public development sites within the TxDOT ROW.

TxDOT Storm Water Planning and Design Guidelines for New Development and Significant Redevelopment, June 2010, are utilized by environmental, planning and design staff. This guideline includes a description of permanent structural and non-structural control measures to reduce pollutants from roadway runoff, and how the controls will be developed and incorporated into the planning process. The goals of such controls for minimizing water quality impact include:

- New development - limiting increases in erosion and the discharge of pollutants in stormwater as a result of development; and,
- Redevelopment – reducing erosion and the discharge of pollutants in stormwater.

TxDOT has a well-defined planning process in place for the development of transportation projects. The transportation planning process incorporates water quality and stormwater management in the early decision-making phases on a project. Stormwater issues are one of the many taken into consideration during the identification of potential alternatives available to meet a project's needs. Later in the transportation planning process, TxDOT follows the environmental review process outlined by the National Environmental Policy Act of 1969 (NEPA) and Federal Highway Administration rules (23 CFR 771) or the state equivalent rule (43 TAC Part 1 Chapter 2).

TxDOT's environmental review process follows strict requirements for public involvement, impact assessment, and agency coordination. The environmental assessment (EA) process includes the assessment, discussion, and evaluation of water quality, existing conditions, its potential impacts, and applicable mitigation measures. TxDOT is required to coordinate with TCEQ as outlined in the TxDOT/TCEQ MOU (see Attachment A).

For typical highway construction projects, TxDOT’s post-construction plan design efforts primarily address stormwater volume reduction/control, velocity dissipation, pollutant reduction, and erosion control practices. Specifically, the use of vegetated ROW enables infiltration and evapotranspiration of stormwater runoff from the TxDOT roadways based on moderate retention and velocity dissipation. The velocity of stormwater discharge is reduced, thus limiting erosion and stream channel degradation and pollutant discharge. TxDOT ROW and new ROW with earthen surfaces are vegetated or re-vegetated according to the specifications included in TxDOT’s Roadside Vegetation Management Manual.

In addition to the Stormwater Management Guidelines for Construction Activities, TxDOT’s Bridge Division’s Hydraulic Manual establishes general procedures for development of highway drainage facilities. It includes a survey of existing characteristics, estimates of future characteristics, engineering design criteria, discharge estimates, structure
requirements, and constraints for the hydraulic design or analysis of highway drainage and receiving facilities. The manual also discusses in some detail stormwater management, erosion control, pollution prevention plans, and issues related to managing the quantity and quality of runoff.

Post-Construction BMP strategies that TxDOT may employ are as follows:

Structural Controls:
- Retention/irrigation ponds
- Extended detention (wet/dry basins)
- Vegetative filter strips
- Vegetated swales
- Constructed wetlands
- Sedimentation ponds/traps
- Infiltration ponds
- Catch basins
- Grated inlets
- Outfall velocity dissipation controls

Non-Structural Controls:
- Street sweeping
- Litter collection
- “No Mow” areas
- Inlet stenciling/Stormwater Inlet Markers

Identification and Selection of Structural Controls

The hydraulics and necessary structural controls for stormwater runoff are identified by TxDOT during the design phase for construction or redevelopment projects located within the regulated area. TxDOT maintains a number of manuals and guidance documents that are relied upon both during the design phase of these projects and during the maintenance activities that follow completion of the projects.

TxDOT will maintain copies of the most recent guidance manuals in locations readily accessible to staff and contractors. TxDOT will continue to use the following manuals and documents. TxDOT will follow long-term operation and maintenance of structural controls protocol in the following manuals.
Roadside Vegetation Management Manual

This guidance document was prepared by the Vegetation Management Section of the Maintenance Division to support TxDOT. This document provides a comprehensive discussion on the establishment and maintenance of vegetative cover.

http://onlinemanuals.txdot.gov/txdotmanuals/veg/index.htm

Evaluation and Management of Highway Runoff Water Quality

The manual was prepared by the Federal Highways Administration (FHWA) and is used by TxDOT highway designers and environmental professionals to identify the appropriate impact prediction and mitigation tools available for use during highway project planning and development activities. The manual has five major sections: Introduction, Coordination with Environmental Agencies and the Public, Highway Runoff Water Quality, Water Quality Impact Assessment, and Best Management Practices.

The Hydraulic Design Manual

The manual was prepared by TxDOT’s Design Division to establish general procedures for development of highway drainage facilities. It includes a survey of existing characteristics, estimates of future characteristics, engineering design criteria, discharge estimates, structure requirements, and constraints for the hydraulic design or analysis of highway drainage and receiving facilities. The manual also discusses in some detail stormwater management, erosion control, pollution prevention plans, and issues related to managing quantity and quality of runoff.

4.2.1 Program Development

TxDOT will assess program elements that were described in the previous permits, modify as necessary, and develop and implement new elements, as necessary, to continue reducing the discharge of pollutants from its MS4 to the MEP. New elements and all elements in newly regulated Phase II MS4 areas will be fully implemented by the end of this permit term.

4.2.2 Ordinances and Other Regulatory Mechanisms

TxDOT does not have the legal authority to enforce state environmental laws against third parties. TxDOT must rely completely on the TCEQ or the local municipal government for law enforcement.

TxDOT has established, implements, and enforces a requirement for its contractors, by contract, and its own departments that develop and redevelop sites to design, install, implement, and maintain a combination of structural and non-structural BMPs appropriate for the community and that protects water quality. If the construction of permanent
structures is not feasible due to space limitations, health and safety concerns, cost effectiveness, or highway construction codes, TxDOT may utilize an alternative approach. Newly regulated areas will have the program element fully implemented by the end of the permit term.

4.2.3 SWMP Update

TxDOT will review and update, as necessary, the SWMP and MCM implementation procedures required by Part III.A.2 of Permit No. WQ0005011000. Any changes will be reflected in the annual reports. Such written procedures will be maintained at the district offices and in the SWMP and made available for inspection by the TCEQ.

4.2.4 Documentation and Records

TxDOT will document and maintain records of enforcement actions and make them available for review by the TCEQ.

4.2.5 Long-term Operation and Maintenance

TxDOT will, to the extent allowable under state, federal, and local law, continue to ensure the long-term operation and maintenance of structural stormwater control measures owned and operated by TxDOT.

4.3 Best Management Practices and Measurable Goals

Permit No. WQ0005011000 requires that TxDOT maintain stormwater control measures appropriate for its MS4. In addition, TxDOT will maintain all long term post-construction stormwater control measures. TxDOT controls will not be located on private property and TxDOT will solely maintain the responsibility and accountability for the operation and maintenance of any controls utilized.

Structural controls may include practices such as permeable pavement and vegetated swales; which are considered to be LID practices, or GI BMPs. TxDOT is required to inspect, where applicable, post-construction controls to ensure that control measures are operating correctly and are being maintained.

For the purpose of Permit No. WQ0005011000, “redevelopment” does not include routine maintenance activities and linear utility installation. Examples of linear utility installation are construction activities that maintain the original line, grade, and hydraulic capacity of the surrounding areas, such as the installation of underground gas lines, fiber-optic cable, cable TV, electric, telephone, sewer mains and water mains. Routine maintenance activities are construction activities that are performed to maintain the original line and grade, hydraulic capacity, or original purpose of a facility, including but not limited to: (1) Re-grading of gravel roads or parking lots; (2) stream bank restoration projects (does not include the placement of spoil material); (3) Cleaning and shaping of existing roadside ditches and culverts that maintains the approximate original line and grade, and hydraulic capacity of the ditch; (4) Placement of aggregate shoulder backing that makes the transition between the road shoulder and the ditch or embankment; (5) Full depth milling and filling of existing asphalt pavements, replacement of concrete pavement slabs, and
similar work that does not expose soil or disturb the bottom six inches of sub-base material; (6) Long-term use of equipment storage areas at or near highway maintenance facilities; (7) Removal of sediment from the edge of the highway to restore a previously existing sheet-flow drainage connection from the highway surface to the highway ditch or embankment; and (8) Replacement of curbs, gutters, sidewalk and guide rail posts.

4.3.1 Program Development

TxDOT will fully implement all applicable new elements and all applicable elements in newly regulated Phase II MS4 areas by the end of the current permit term. All new elements and elements in newly regulated Phase II areas completed will be included in the Annual report in the reporting year accomplished.

4.3.2 Ordinances and Other Regulatory Mechanisms

TxDOT lacks authority to prohibit or to control post-construction discharges of stormwater from areas of new development and redevelopment located outside of the ROW. New development and redevelopment projects within the ROW are under TxDOT control and are regulated through contract agreement during construction. TxDOT policy requires all new development and re-development projects, including highway construction subject to the TCEQ Stormwater CGP, to include permanent controls appropriate for the project and for local water bodies. Permanent controls may be structural or non-structural in nature. Because highway projects are linear in nature and ROW is often limited, non-structural controls are frequently necessary and are considered adequate if the construction of permanent structures is not feasible due to space limitations, health and safety concerns, cost effectiveness, or highway construction codes.

TxDOT will include in its current year annual report any changes to its regulatory mechanism.

4.3.3 SWMP Update

TxDOT will review and update, as necessary, the SWMP and MCM implementation procedures required by Part III.A.2 of Permit No. WQ0005011000. Any changes will be reflected in the annual reports if updates are made. Any updated written procedures to the SWMP will be forwarded to and maintained at the district offices.

4.3.4 Documentation and Records

TxDOT will retain all associated records for at least three years after coverage under this permit terminates and make them available for TCEQ review.

4.3.5 Long-term Operation and Maintenance

TxDOT personnel or TxDOT approved consultants will routinely drive the regulated area to inspect and routinely maintain permanent control measures and ensure adequate long-term operation of BMPs. Maintenance of permanent controls includes mowing, repair of erosion features, pond sediment removal, etc. TxDOT currently has design standards that ensure compliance for structural and non-structural runoff controls.
TxDOT will include in its annual report to TCEQ the amount of maintenance activities performed on post construction controls.

5.0 MCM 5 - POLLUTION PREVENTION AND GOOD HOUSEKEEPING FOR TRANSPORTATION OPERATIONS

5.1 Permit Requirements

(a) Program development

The permittee shall continue to develop and implement an operation and maintenance program, including an employee training component that has the ultimate goal of preventing or reducing pollutant runoff from roadway activities and areas owned by the permittee including, but not limited to, ROW maintenance; street, road, or highway maintenance; fleet and building maintenance; stormwater system maintenance; new construction and land disturbances; vehicle and equipment maintenance and storage yards; and salt/sand storage locations.

The permittee shall assess program elements that were described in the previous permit, modify as necessary, and develop and implement new elements, as necessary, to continue reducing the discharges of pollutants from the MS4 to the MEP. New elements and all elements in newly regulated Phase II MS4 areas must be fully implemented by the end of this permit term. See also Part III.A.1.(g).

(b) Permittee-owned Facilities and Control Inventory

The permittee shall develop and maintain an inventory of facilities and stormwater controls that it owns and operates within the regulated areas of the MS4. If feasible, the inventory may include all applicable permit numbers, registration numbers, and authorizations for each facility or controls. The inventory must be available for review by TCEQ and must include, but not limited to, the following, as applicable:

(1) Equipment storage and maintenance facilities;
(2) Fuel storage facilities;
(3) Materials storage facilities;
(4) Pesticide storage facilities;
(5) Buildings, including office buildings;
(6) Parking lots;
(7) Salt storage facilities;
(8) Street repair and maintenance sites;
(9) Vehicle storage and maintenance yards;
(10) Rest areas; and
(11) Structural stormwater controls.
(c) Training and Education

The permittee shall continue to inform or train appropriate employees involved in implementing pollution prevention and good housekeeping practices. The permittee shall maintain a training attendance list for inspection by TCEQ when requested.

(d) Disposal of Waste Material

Waste materials removed from the MS4s must be disposed of in accordance with 30 TAC Chapters 330 or 335, as applicable.

(e) Contractor Requirements and Oversight

(1) Any contractors hired by the permittee to perform maintenance activities on permittee-owned facilities must be contractually required to comply with all of the stormwater control measures, good housekeeping practices, and facility-specific stormwater management operating procedures described in Parts III B.5.

(2) The permittee shall provide oversight of contractor activities to ensure that contractors are using appropriate control measures and SOPs. Oversight procedures must be developed before the end of the permit term and maintained at the permittee’s district office or at the headquarters and made available for inspection by TCEQ.

(f) Roadway Operation and Maintenance Activities

(1) Assessment of permittee-owned operations

The permittee shall evaluate operation and maintenance (O&M) activities for their potential to discharge pollutants in stormwater, including, but not limited to:

a. Road and parking lot maintenance may include such areas as pothole repair, pavement marking, sealing, and re-paving;

b. Bridge maintenance may include such areas as re-chipping, grinding, and saw cutting;

c. Cold weather operations, including plowing, sanding, and application of deicing and anti-icing compounds and maintenance of snow disposal areas; and

d. ROW maintenance, including mowing, herbicide and pesticide application, and planting vegetation.

(2) The permittee shall identify POCs that could be discharged from the above O&M activities (for example: metals; chlorides; hydrocarbons such as benzene, toluene, ethyl benzene, and xylenes; sediment; and trash).

(3) The permittee shall develop and implement a set of pollution prevention measures that will reduce the discharge of pollutants in stormwater from the above activities.

These pollution prevention measures may include the following examples:

a. Replacing materials and chemicals with more environmentally benign materials or methods;
b. Changing operations to minimize the exposure or mobilization of pollutants to prevent them from entering surface waters; and

c. Placing barriers around or conducting runoff away from deicing chemical storage areas to prevent discharge into surface waters.

(4) Inspection of pollution prevention measures - All pollution prevention measures implemented at permittee-owned facilities must be visually inspected at a frequency determined by the permittee to ensure they are working properly. A log of inspections must be maintained at the permittee’s district office and made available for review by the TCEQ upon request.

(g) Structural Control Maintenance

If BMPs include structural controls, maintenance of the controls must be performed at a frequency determined by the permittee and consistent with maintaining the effectiveness of the BMP.

(h) Additional Requirements for Previous Phase I Permitted Areas

In addition to all the requirements described above, the permittee shall meet the following requirements in areas that were previously permitted under a Phase I permit.

Pesticide, Herbicide, and Fertilizer Application and Management

a. Landscape maintenance – The permittee shall evaluate the materials used and activities performed on public spaces owned and operated by the permittee such as rest areas, easements, public ROWs, and other open spaces for pollution prevention opportunities. Maintenance activities for the turf landscaped portions of these areas may include mowing, fertilization, pesticide application, and irrigation. Typical pollutants include sediment, nutrients, hydrocarbons, pesticides, herbicides, and organic debris.

b. The permittee shall implement the following practices to minimize landscaping-related pollutant generation with regard to public spaces owned and operated by the permittee:

(i) Educational activities, permits, certifications, and other measures for the permittee’s applicators and distributors.

(ii) Pest management measures that encourage non-chemical solutions where feasible. Examples include:

(a) Use of native plants or xeriscaping;

(b) Keeping clippings and leaves out of the MS4 and the streets by encouraging mulching, composting, or landfiling;

(c) Limiting application of pesticides and fertilizers if precipitation is forecasted within 24 hours, or as specified in label instructions; and

(d) Reducing mowing of grass to allow for greater pollutant removal, but not jeopardizing motorist safety.
c. The permittee shall develop schedules for chemical application in public spaces owned and operated by the permittee that minimizes the discharge of pollutants from the application due to irrigation and expected precipitation.

d. The permittee shall ensure collection and proper disposal of the permittee’s unused pesticides, herbicides, and fertilizers.

5.2 Program Overview

5.2.1 Program Development

TxDOT will assess program elements that were described in the previous permits, modify as necessary, and develop and implement new elements, as necessary, to continue reducing the discharge of pollutants from its MS4 to the MEP. New elements and all elements in newly regulated Phase II MS4 areas will be fully implemented by the end of this permit term.

5.2.2 TxDOT-Owned Facilities and Control Inventory

TxDOT does not own or operate facilities subject to the TCEQ Industrial Stormwater Multi-Sector General Permit (MSGP). There are no TxDOT activities that are subject to the TCEQ MSGP. Within the permitted boundary, TxDOT does not operate or maintain the following types of operations: park and open space; waste transfer stations; composting facilities; hazardous waste disposal facilities; hazardous waste handling and transfer facilities; incinerators; landfills; schools, libraries, police stations, fire stations, and office buildings; parking lots; golf courses; swimming pools; recycling facilities; or solid waste handling and transfer facilities. TxDOT will develop and maintain a list of TxDOT owned non-roadway facilities within the regulated area. These facilities may include:

1) Equipment storage and maintenance facilities;
2) Fuel storage facilities;
3) Materials storage facilities;
4) Pesticide storage facilities;
5) Buildings, including office buildings;
6) Parking lots;
7) Salt storage facilities;
8) Street repair and maintenance sites;
9) Vehicle storage and maintenance yards;
10) Rest areas; and
11) Structural stormwater controls.
5.2.3 Training and Education

TxDOT does not have MS4-specific field staff. Field staff consist of multi-disciplinary personnel assigned by the district engineer, and responsibilities range from maintenance to engineering. Staff perform several tasks (for example, construction inspection, emergency response, and environmental processes) during normal job responsibilities.

Personnel who perform MS4 operations are provided with training that contains information on identifying illicit discharge, preventing, and reducing potential stormwater pollution from the TxDOT MS4. Attachment B lists all applicable training classes; the list presented in Attachment B may change due to updates, new training module development, and/or removal of outdated materials.

5.2.4 Disposal of Waste Material

Waste materials removed from the TxDOT regulated area will be disposed of in accordance with 30 TAC Chapters 330 or 335, as applicable.

The frequency of finding unknown substances on the highway varies. The characterization of unknowns usually results in costly testing to first classify the material. A waste can be classified as hazardous by the EPA because it is listed, it exhibits hazardous characteristics, or it is a mixture of wastes that contains a listed waste or a characteristic waste. The wastes may be saturating soils or within sediment encountered during a maintenance activity. There is a potential for the problem to become magnified when dealing with unlabeled waste drums improperly stored or appearing on the ROW. When waste is found on the ROW from an unknown source and/or is unidentified, the available options are usually limited to analytical testing before disposal.

TxDOT ensures all hazardous waste, used motor vehicle fluids, and other waste used by TxDOT employees are disposed of in accordance with applicable regulations and are not exposed to stormwater runoff.

In addition, TxDOT has a recycling program that is in effect as part of its overall waste reduction effort. Since there are no residents in the TxDOT MS4 or ROW, TxDOT does not operate a household collection program. However, TxDOT does support, publicize, and promote related programs to its employees and when contacted by the public. TxDOT will provide them with the best available information on a service in their community and/or area. As a BMP, TxDOT has outsourced a large percentage of general auto repairs, including oil changes.

Dredge spoils, accumulated sediment, and floatables removed from the MS4 will be stockpiled or disposed of in a local landfill or upland locations as necessary.

5.2.5 Contractor Requirements and Oversight

The primary use of the ROW is to accommodate the state highway system. However, other utilities are allowed to use the ROW under certain circumstances. TxDOT’s utility policy applies to underground, surface, or overhead facilities. These are private lines as well as public, including power transmission, telephone, telegraph, television cable, water, gas,
oil, petroleum products, chemicals, steam, sanitary sewer and similar lines. TxDOT utilizes a utility permit process with intent to regulate the location, design and methods for installation and adjustment of utility lines on state-controlled highways.

5.2.6 Roadway Operation and Maintenance Activities

The Pollution Prevention/Good Housekeeping MCM consists of BMPs that focus on training and the prevention or reduction of pollutants in runoff from transportation operations that occur within the TxDOT regulated area.

TxDOT has existing good housekeeping measures and non-structural BMPs that reduce the discharge of pollutants from the following transportation operations.

- Street, road, or highway maintenance;
- Fleet and building maintenance;
- Stormwater system maintenance;
- New construction and land disturbances;
- Vehicle and equipment maintenance and storage yards; and,
- Salt/sand storage locations.

5.2.7 Structural Control Maintenance

Due to the linear nature of TxDOT’s MS4 (for example, highway alignments), TxDOT roadways primarily use vegetative controls that ensure water quality. The most common structural controls used by TxDOT are vegetative controls/filters as follows:

- Grassed channels, waterways, ditches, or swales designed to inhibit erosion and enhance the settling of suspended solids; and.
- Overland flow through a filter strip where such strips consist of grass or forested vegetation designed to filter pollutants from sheet flow runoff and increase filtration.

TxDOT structural control measures may also include the following:

- Retention/irrigation ponds;
- Extended detention basin (wet/dry basins);
- Constructed wetlands;
- Sand filters;
- Sedimentation ponds/traps;
- Infiltration ponds;
- Catch basins;
- Grated inlets; and,
- Outfall velocity dissipation controls.
Additionally, new specification of materials used to construct roadways such as permeable friction courses (PFC) also serve as a filter for runoff, as stormwater flows through PFC. A PFC was originally designed to reduce visibility impairment on windshields due to stormwater vehicular spray. This technology is a key example of TxDOT identifying a structural control that not only improves water quality, but also has a dual use of improving public safety.

TxDOT designs stormwater structural controls in a manner to reduce the discharge of pollutants to the MEP. TxDOT utilizes the following manuals, design specifications, and maintenance guidance:

- TxDOT's manual entitled "Stormwater Management Guidelines for Construction Activities" provides guidelines to prevent potential erosion and pollutants from projects from flowing into WUS. The manual also provides guidelines for each structural control device, including height, width, depth, and drainage area design requirements;

- TxDOT maintains stringent design specifications, ensuring structural goals meet water quality requirements;

- Structural control measures can be used alone or in combination to address site-specific highway runoff pollution problems. Section 5.2 of the Stormwater Management Guidelines for Construction Activities, found at https://ftp.dot.state.tx.us/pub/txdot-info/env/storm/5.0sedimentationcontrol.pdf describes additional structural control measures as well as the appropriate usage and typical design efforts; and,

- The effectiveness of controls is a function of variables related to site conditions, highway design, surrounding water quality, and other stormwater considerations.

5.2.8 Additional Requirements for Previous Phase I Permitted Areas

In addition to all of the requirements described above, TxDOT will meet the following requirements in areas that were previously permitted under a Phase I permit.

Pesticide, Herbicide, and Fertilizer Application and Management

a) Landscape maintenance – TxDOT will evaluate the materials used and activities performed on public spaces owned and operated by TxDOT such as rest areas, easements, public ROWs, and other open spaces for pollution prevention opportunities. Maintenance activities for the turf landscaped portions of these areas may include mowing, fertilization, pesticide application, and irrigation. Typical pollutants include sediment, nutrients, hydrocarbons, pesticides, herbicides, and organic debris.

b) TxDOT will implement the following practices to minimize landscaping-related pollutant generation with regard to public spaces owned and operated by TxDOT:
1) Educational activities, permits, certifications, and other measures for the permittee’s applicators and distributors.

2) Pest management measures that encourage non-chemical solutions where feasible. Examples include:

   (a) Use of native plants or xeriscaping;

   (b) Keeping clippings and leaves out of the MS4 and the streets by encouraging mulching, composting, or landfilling;

   (c) Limiting application of pesticides and fertilizers if precipitation is forecasted within 24 hours, or as specified in label instructions; and,

   (d) Reducing mowing of grass to allow for greater pollutant removal, but not jeopardizing motorist safety.

c) TxDOT will develop schedules for chemical application in public spaces owned and operated by the permittee that minimizes the discharge of pollutants from the application due to irrigation and expected precipitation.

d) TxDOT will ensure collection and proper disposal of the permittee’s unused pesticides, herbicides, and fertilizers.

5.3 Best Management Practices and Measurable Goals

5.3.1 Program Development

TxDOT will fully implement all applicable new elements and all applicable elements in newly regulated Phase II MS4 areas by the end of the current permit term. All new elements and elements in newly regulated Phase II areas completed will be included in the Annual report in the reporting year accomplished.

5.3.2 TxDOT-Owned Facilities and Control Inventory

TxDOT will ensure inspections of good housekeeping and related BMPs are completed once per permit term at facilities within or immediately adjacent to the regulated area by implementing the following BMPs:

1) TxDOT will complete the "Facility Environmental Compliance Survey" at least once during the permit term for each facility within or adjacent to the ROW within the MS4. A TxDOT team will inspect TxDOT maintenance facility operations in the following program areas at each TxDOT maintenance facility: stormwater, solid waste management, hazardous waste management, used oil and oil filter management, used antifreeze management, used lead acid battery management, scrap tire management, general housekeeping, equipment washing wastewater management, spill prevention control and countermeasure (SPCC) planning, and petroleum storage tank management. Attachment J contains the TxDOT Facility Environmental Compliance Survey.
TxDOT will include the number of inspections completed during the permit year in the annual report.

2) TxDOT personnel or TxDOT approved consultants will inspect and maintain permanent structural control measures and ensure adequate long-term operation of BMPs. Maintenance of permanent structural controls includes repair of erosion features, removal of sediment and debris, etc. TxDOT currently has design standards that ensure compliance for structural and non-structural runoff controls. TxDOT will update its inventory and assess the status of the structural controls as determined by TxDOT.

TxDOT will include the number of inspections completed during the permit year in the annual report.

3) TxDOT ENV will map/locate permanent structural controls, such as detention/irrigation ponds, hazardous waste traps, sand filter traps, infiltration ponds, or catch basins. TxDOT will perform the mapping of 5 districts per year or will perform the mapping of the entire MS4 within the 5-year permit term.

A map will be included in the annual reports.

4) TxDOT’s procedure for disposal of dredged spoil and accumulated sediment from structural controls is to dispose of sediment into either upland locations or landfills. This procedure will not result in re-deposition of sediment into the system, and assures proper disposal of sediments in accordance with 30 TAC Chapter 330 or 335 rules. Floatables that are collected will be disposed of in a municipal landfill.

TxDOT will report the number of structural controls receiving maintenance each year in the annual report.

5.3.3 Training and Education

TxDOT employees who perform work that could affect stormwater within the MS4 attend at least one of the training classes listed in Attachment B per permit term.

TxDOT requires all in-house personnel handling and applying herbicides, pesticides, and fertilizers take a 12-hour training course and become licensed ground applicators. Licensing is achieved by passing an examination administered by the Texas Department of Agriculture. An annual eight-hour refresher course is required for licensed applicators.

Training programs familiarize TxDOT employees about office waste recycling. TxDOT continues to educate affected personnel concerning recycling of waste oil, batteries and tires; disposal of hazardous materials and solvents; and proper removal of asbestos and lead-based paint. Since 1995, TxDOT has been a member of the Recycling Development Marketing Board, and TxDOT has developed a Recycling and Recycled Products Program geared toward road construction and maintenance, offices, equipment fleet, buildings, break areas, and cafeterias. Training classes are listed in Attachment B.

TxDOT will report the number of employees and contractors that received training during the permit year in the annual report.
### 5.3.4 Disposal of Waste Material

TxDOT manages the removal of waste products threatening water quality on the ROW by:

- Checking the EPA list of hazardous chemical names if known. EPA also provides a list of sources that generate hazardous waste and should be checked;
- Understanding the process of identification and disposal;
- Testing the waste for hazardous characteristics; and,
- By removing the subject material from the ROW as quickly as possible to avoid potential migration and further contamination.

The discharge or disposal of used motor vehicle fluids and household hazardous wastes, and the intentional disposal of collected quantities of grass clippings, leaf litter, and animal wastes into the MS4 is prohibited.

TxDOT will report the cost, and volume if available, of waste material disposed of each year in the annual report.

### 5.3.5 Contractor Requirements and Oversight

Under existing laws, various utility firms and agencies have a legal right to install their lines along and across state highways. TxDOT will assure that its policies governing the design, location, and methods of installation are set out in the Maintenance Operations Manual (found at [http://onlinemanuals.txdot.gov/txdotmanuals/ope/ope.pdf](http://onlinemanuals.txdot.gov/txdotmanuals/ope/ope.pdf)), and in the Utility Accommodation Policy Manual maintained by the ROW Division. The ROW Division’s “Utility Manual” (found at [http://onlinemanuals.txdot.gov/txdotmanuals/utl/index.htm](http://onlinemanuals.txdot.gov/txdotmanuals/utl/index.htm)) are implemented by contractors. TxDOT will give guidance in the administration of utility adjustments or financial participation therein, where applicable. Although difficult to determine the legal status of some of the proposed installations, TxDOT maintains its rights to designate the location and conditions that will govern their installation and maintenance.

TxDOT receives requests to temporarily use highway ROW for investigation and remediation of leaking petroleum storage tanks (LPST). The applicants are both private property owners and public entities. Through cooperation with TCEQ, TxDOT is successfully using an agreement process with the LPST site owner and contractor to manage the LPST investigation and remediation operations on TxDOT ROW. Any remediation involving the ROW requires TxDOT approval.

TxDOT will report the number of utility permits issued during the permit year in the annual report. Any issues related to contractor operations will also be included, as necessary, in the annual report.

### 5.3.6 Roadway Operation and Maintenance Activities

TxDOT operates and maintains highways in a manner to minimize the discharge of pollutants from road repair, equipment yards, and material storage/maintenance facilities to the MEP. BMPs and statewide programs described throughout this SWMP have the primary
goal of minimizing pollutants from roadways, as the highways are TxDOT’s primary MS4 area of operation. In addition, TxDOT implements the following BMPs to minimize pollutant discharge:

1) Assessment of permittee-owned operations

TxDOT has evaluated operation and maintenance (O&M) activities for their potential to discharge pollutants in stormwater. TxDOT’s findings for each permit requirement (in italics) is:

a) Road and parking lot maintenance may include such areas as pothole repair, pavement marking, sealing, and re-paving;

TxDOT engages in earth-disturbing operations during regular maintenance of roadways. These operations, such as shoulder blading and ditch cleaning, do not presently meet the definition of construction activities as regulated by the TPDES program, but TxDOT encourages the use of controls to limit erosion and sedimentation resulting from these projects. Most highway maintenance sites experience little erosion since the work is performed as follows:

- At the proper time of year (season);
- At a location protected from sensitive environments;
- With minimal land area disturbance; and,
- Only after an investigation/knowledge of area soils.

During usual maintenance, minimal amounts of land area are disturbed or rehabilitated into additional paved surface areas, which could increase stormwater runoff. Ditch work is scheduled in seasons when the vegetation will recover, or seeding, sodding, and fertilizing could safely be utilized.

b) Bridge maintenance may include such areas as re-chipping, grinding, and saw cutting;

Bridge paint removal and application projects are closely scrutinized to ensure potentially hazardous materials do not adversely affect the environment. Sand blasting has typically been used in the cleaning and removal of paint from equipment and structures, particularly on maintenance of existing bridges. New air control regulations limiting airborne particles and the work locations near water impoundments has placed a greater awareness of the potential for environmental impact to receiving waters. Old paints often contain a substantial amount of heavy metals (e.g., lead, chromium), with some of the newer paints containing volatile organic compounds (VOCs).

Before paint is to be removed, it is to be tested for heavy metals (especially lead), and where suspected, asbestos. If lead is present, all blast material will be contained and collected. Blast material is to be tested for hazardous materials and disposed of properly. TxDOT, at several levels, is working with state and federal agencies in researching methods of encapsulating the resulting
contaminant (usually lead and/or asbestos) and containing blast sand into reusable material such as concrete or clay bricks. If asbestos is present, sand blasting is not allowed.

Heavy equipment and building paint removal and application projects will continue to be performed by contract and state labor.

c) Cold weather operations, including plowing, sanding, and application of deicing and anti-icing compounds and maintenance of snow disposal areas; and

Nothing is more important than safety to TxDOT especially during harsh winter weather. TxDOT's primary objective is to provide motorists with safe travel on all of the roadways we maintain. We do this through the strategic use of various resources at our disposal as well as through the dedication, determination and teamwork of the men and women of TxDOT.

Roadways are prioritized by Interstate, U.S. Highway, State Highway, and Farm-to-Market as well as bridges, overpasses, high traffic interchanges, and high traffic roadways. Local authorities are responsible for city and county roads.

TxDOT crews begin preparing for winter weather early in the season. Equipment is inventoried, inspected and calibrated for quick response. Pre-icing and de-icing materials are inventoried and ordered, as needed. Stockpiles are replenished with enough materials for a multiple day event and emergency contracts are readied, just in case. “Watch for Ice on Bridges” signs are opened at the beginning of the season.

Activities that occur before a predicted ice/snow event include:

- Equipment Preparations:
  - All equipment is serviced;
  - Spreader boxes are installed on dump trucks;
  - Spreader equipment is calibrated to deliver correct material amounts;
  - Heavy equipment loaders are staged and operable.

- Other Preparations:
  - Routes are determined and assigned according to winter weather plans;
  - Sand and chemical stockpiles are strategically located in areas expected to be impacted;
  - TxDOT monitors weather reports and communicates with nearby districts to determine if help is needed;
  - If needed, crews may be dispatched to pre-treat bridges and overpasses;
  - Districts participate in National Weather Service conference calls.
• During an Ice/Snow Event:
  o Supervisors continually monitor weather and road conditions, traffic cameras, road sensors, hotlines and management reports;
  o Personnel and equipment adjustments are made as needed;
  o Crews spread sand and pre-icer or de-icer materials along assigned routes;
  o Work continues 24/7 to keep roadways passable;
  o Public Information Officers work with the media (newspapers, radio, TV) and through social media networks (Twitter, Facebook, etc.) to get road condition information out to the public; and,
  o Road conditions are updated on TxDOT’s Web site.
• After an Ice/Snow Event:
  o Material stockpiles are replenished to be ready for the next event;
  o Roadways are swept clean of excess sand or other materials; and,
  o Winter plans are evaluated for effectiveness and adjusted if needed.
• Materials Used
  o Pre-icing: Liquid magnesium chloride is primarily sprayed on bridges and overpasses before a storm to help prevent a hard bond of ice, reduce snow buildup and to speed snow and ice breakup;
  o De-icing: Magnesium chloride pellets are mixed with sand to help remove thick layers of ice already on the road. Magnesium chloride is made with natural sea salt and is less corrosive than rock salt and more environmentally friendly than baking soda;
  o Grade 5 Sand: used to improve traction and as a mixing agent for magnesium chloride;
  o Salt: still preferred in some situations because it is very fast-acting. Sometimes used to free up stalled trucks on an icy road; and,
  o Calcium Magnesium Acetate: chemical formulation of dolomitic lime and acetic acid. Used in a granular form, it is easier to spread with pickups than the larger bulk bags of magnesium chloride.

Removal of snow and ice from TxDOT roadways is classified as an emergency operation that takes precedence over all other work to ensure public safety. Deicing salt is used on a limited basis by TxDOT. The preferred method of maintaining a safe roadway during icy conditions is through the use of sand without salt. Only during the most severe conditions will salt be mixed with the sand, at approximately 100 pounds of salt per cubic yard of sand. During and
after the icy conditions, inspections are conducted to ensure proper cleanup operations minimize pollutant discharge from the MS4.

d) **ROW maintenance, including mowing, herbicide and pesticide application, and planting vegetation.**

Mowing is addressed in Section 5.3.6.5.

Although numerous structural controls are available to reduce pollutant loading, TxDOT’s management practices rely heavily on vegetation and re-vegetation management principles.

TxDOT implements controls to reduce the discharge of pollutants related to the storage and application of pesticides, herbicides, and fertilizers, applied by TxDOT’s employees or contractors, to public ROW, or other TxDOT property. TxDOT has documented its management of roadside vegetation in the Roadside Vegetation Management Manual as follows:

- The purposes of the vegetation management guidelines are to: i) Enhance the safety of the traveling public; ii) Enhance environmental protection; iii) Promote and preserve native wildlife habitats and native flora throughout the state; iv) Mitigate erosion while providing adequate drainage; and v) Promote coordination and efficiency in maintenance activities;

- Vegetation management includes propagation and control of vegetation that is accomplished by physical means of hand-pulling, hoeing, plowing, cultivating, trimming, and mowing. Chemical methods include the application of approved herbicides to control specific vegetation problems;

- The manual describes proper selection of herbicides, application rates, and various factors that contribute to proper usage;

- TxDOT’s herbicide program is based upon extensive research for chemicals which will provide the desired control of the target species while presenting the minimum possibility of harm to the environment, the applicator, or to the traveling public;

- Employees applying herbicides are licensed by the state and furthermore, TxDOT arranges annual training workshops for TxDOT maintenance personnel, subcontractors, and contractors. Materials include information about vegetation management;

- The Texas Agriculture Code requires TxDOT employees to possess a valid, non-commercial, pesticide applicator’s license prior to applying herbicide on the transportation system ROW, or on the grounds of any TxDOT facility. The training prepares TxDOT employees to test for a non-commercial pesticide applicator’s license from the Texas Department of Agriculture (TDA) and introduces TxDOT employees to TxDOT’s herbicide program. This course is offered to maintenance personnel. Once licensed, applicators must attend a TxDOT training session or watch continuing education videos on an annual
basis. Also in accordance with TDA requirements, TxDOT maintains herbicide application records for two years after herbicide application;

- The plan calls for strict coordination between mowing and herbicide operations. As an example, TxDOT may overspray an area, which allows the herbicide to translocate to the target species’ root system;
- While not as common, TxDOT does require insect pesticide applications for worker and public safety, fire ant areas, beehives, and other insect nests in TxDOT ROW and operational areas including rest stops and signal boxes; and,
- TxDOT’s Specifications for Construction and Maintenance of Highways, Streets, and Bridges, Item 166.2, specifies: the use of a complete fertilizer containing nitrogen (N), phosphorous (P), and potash (K) nutrients unless otherwise specified on the plans; at least 50% of the nitrogen component must be of a slow-release formulation; and, ensures that fertilizer is in an acceptable condition for distribution in containers labeled with the analysis. Item 166.3 - specifies that the fertilizer is delivered and applied uniformly at a rate equal to 100 lb. of nitrogen per acre or at the analysis and rate specified on the plans. Fertilizers are normally applied as a one-time item nearing the end of initial construction of a roadway and vegetation is being established.

2) TxDOT has identified pollutants of concern that could be discharged from the above O&M activities.

Potential pollutants are as follows:

- Metals, specifically lead, copper, and chlorides;
- Hydrocarbons, specifically oil and grease;
- Sediment; and,
- Trash.

3) TxDOT has developed and implements a set of pollution prevention measures that will reduce the discharge of pollutants in stormwater from the following activities:

- Replacing materials and chemicals with more environmentally benign materials or methods. There are numerous chemicals being registered by the EPA for both agricultural (crop) and ROW (non-crop) situations. Some of these chemicals have proven to provide excellent benefits to the vegetation manager in over-coming and/or controlling specific vegetation problems along the transportation system. TxDOT does extensive research annually on herbicides to ensure it is using the best, latest, and safest EPA approved herbicides.
- Changing operations to minimize the exposure or mobilization of pollutants to prevent them from entering surface waters. TxDOT has incorporated, where applicable, a PFC surface treatment into roadway construction - the latest
controls for stormwater quality since 2004. A PFC reduces splash and spray from vehicular traffic, minimizing the pollutant wash-off and reducing potential pollutant transport. TxDOT, through research and testing, determined that PFC has proven to reduce a certain percentage of pollutants before they reach surface waters. TxDOT studies have indicated a concentration reduction of the following parameters of concerns:

- 88 percent reduction of Total Suspended Solids (TSS);
- 63 percent reduction of Total Phosphorus;
- 57 percent reduction of Total copper;
- 88 percent reduction of Total lead;
- 84 percent reduction of Total zinc; and,
- 40 percent reduction of dissolved zinc.

- Placing barriers around or conducting runoff away from deicing salt/rock storage areas to prevent discharge into surface waters. TxDOT has berms or barriers around the deicing salt/rock storage areas. Some districts store salt/rock inside the building. TxDOT has been moving toward using a much lower salt concentration brine water for deicing and pre-icing.

4) Perform inspections of pollution prevention measures - All pollution prevention measures implemented at TxDOT-owned facilities will be visually inspected once per permit term. Inspection forms will be maintained at the TxDOT’s district offices and made available for review by the TCEQ upon request.

TxDOT performs and submits its findings in Section 5.3.2 above.

5) Mowing and Vegetation Management for Street, Road, or Highway Maintenance

Mowing and vegetation management are an integral part of TxDOT’s highway maintenance program. The wildflower program is part of a comprehensive vegetation management program. It encourages the growth of native species that require less mowing and care. The native grasses and wildflowers help to conserve water, control erosion and provide a habitat for wildlife. The department normally plants wildflowers annually and has a multi-million dollar annual landscaping budget. The amounts vary each year depending on its need. Mowing is delayed until wildflowers have produced mature seeds to assure the preservation and propagation of wildflower species. Detailed information on the wildflower program, as well as types of mowing, special situations mowing and litter pickup, and non-mow areas, are located in the Roadside Vegetation Management Manual, (http://onlinemanuals.txdot.gov/txdotmanuals/veg/index.htm).

TxDOT will report the number of miles mowed during the permit year and include in the annual report.
6) **Storm Sewer System and Drainage Ditch Cleaning**

Drainage ditches are cleaned on an as-needed basis during the summer. During the winter, all state-owned drainage ditches are systematically cleaned. Stormwater structures are cleaned on an as-needed basis as identified by inspection procedures.

TxDOT will report the number of miles of ditches cleaned during the permit year and include in the annual report.

7) **Material Storage at Maintenance Facilities**

TxDOT's Occupational Safety (OCC) and Environmental Affairs (ENV) divisions have implemented programs that require periodic inspections of each district/maintenance section. The objective of both programs is to note hazards within the workplace that may contribute to employee accidents and/or violate state and federal regulations (including water quality). The responses by the Districts have shown that the OCC and ENV survey teams are serving as educators as well as reporters. These programs have resulted in improved operations associated with the storage, handling, labeling and personal protection requirements involved with such items as solvents, wet batteries, paint/oil/grease barrels, etc.

8) **Stockpiled Materials**

Stockpile Management procedures and practices are designed to reduce or eliminate air and stormwater pollution from stockpiles of soil, paving materials such as portland cement concrete rubble, reclaimed asphalt pavement (RAP), hot mixed-cold laid bituminous mixes, limestone rock asphalt, pre-coated aggregates, various patching mixes, and road deicing salt and sand.

TxDOT implements best management practices at all facilities that stockpile soil and other materials. Protection of stockpiles is a year-round requirement. To properly manage stockpiles TxDOT:

- Locates stockpiles away from concentrated flows of stormwater, drainage courses, and inlets;
- Protects all stockpiles from stormwater run-on using temporary perimeter sediment barriers, such as berms, dikes, fiber rolls, silt fences, sandbag, gravel bags, or straw bale barriers where available and appropriate;
- Places bagged materials on pallets and under cover where available and appropriate;
- Will inspect stockpiled materials once every 18 months to verify continued BMP implementation; and,
- Repair and/or replace perimeter controls and covers as needed to keep them functioning properly.

TxDOT will report the number of miles mowed, the linear feet of storm sewer system and drainage ditches cleaned, and the number of inspections performed at material storage and stockpile areas in the annual report.
5.3.7 Structural Control Maintenance

BMPs associated with this section are performed and reported in Sections 5.3.2 and 5.3.6 above. These activities include:

- TxDOT personnel or TxDOT approved consultants will inspect and maintain permanent structural control measures and ensure adequate long-term operation of BMPs. Maintenance of permanent structural controls includes repair of erosion features, removal of sediment and debris, etc. TxDOT currently has design standards that ensure compliance for structural and non-structural runoff controls. TxDOT will update its inventory and assess the status of the structural controls as determined by TxDOT.

  TxDOT includes the number of inspections completed, and the volume of trash and debris removed, if available, from permanent structural controls during the permit year in Section 5.3.2.

- TxDOT ENV will map/locate permanent structural controls, such as detention/irrigation ponds, hazardous waste traps, sand filter traps, infiltration ponds, or catch basins. TxDOT will perform the mapping of 5 districts per year or will perform the mapping of the entire MS4 within the 5-year permit term.

  A map will be included in the annual reports in Section 5.3.2.

- TxDOT’s procedure for disposal of dredged spoil and accumulated sediment from structural controls is to dispose of sediment into either upland locations or landfills. This procedure will not result in re-deposition of sediment into the system, and assures proper disposal of sediments in accordance with 30 TAC Chapter 330 or 335 rules. Floatables that are collected will be disposed of in a municipal landfill.

  TxDOT reports the cost of spoil, sediment and trash removed in the annual report in Section 5.3.2.

- Mowing and vegetation management.

  TxDOT reports the number of miles mowed during the permit year and include in the annual report in Section 5.3.6.

- Storm sewer system and drainage ditch cleaning.

  TxDOT reports the number of miles of ditches cleaned during the permit year and include in the annual report in Section 5.3.6.
5.3.8 Additional Requirements for Previous Phase I Permitted Areas

In addition to all the requirements described above, TxDOT meets the following requirements in areas that were previously permitted under a Phase I permit.

Pesticide, Herbicide, and Fertilizer Application and Management

1) Landscape maintenance – Mowing and vegetation management are an integral part of TxDOT's highway maintenance program. The wildflower program is part of a comprehensive vegetation management program. It encourages the growth of native species that require less mowing and care. The native grasses and wildflowers help to conserve water, control erosion and provide a habitat for wildlife. The department normally plants wildflowers annually and has a multi-million dollar annual landscaping budget. The amounts vary each year depending on its need. Mowing is delayed until wildflowers have produced mature seeds to assure the preservation and propagation of wildflower species. Detailed information on the wildflower program, as well as types of mowing, special situations mowing and litter pickup, and non-mow areas, are located in the Roadside Vegetation Management Manual, (http://onlinemanuals.txdot.gov/txdotmanuals/veg/index.htm).

TxDOT reports the number of miles mowed during the permit year in Section 5.3.6.

2) TxDOT implements the following practices to minimize landscaping-related pollutant generation with regard to public spaces it owns and operates:

   a) Employees applying herbicides are licensed by the state and furthermore, TxDOT arranges annual training workshops for TxDOT maintenance personnel, subcontractors, and contractors. Employees receiving training are reported in Section 5.3.3.

   b) TxDOT implements controls to reduce the discharge of pollutants related to the storage and application of pesticides, herbicides, and fertilizers, applied by TxDOT’s employees or contractors, to public ROW, or other TxDOT property.

      This includes schedules developed for application to minimize runoff as described in Section 5.3.6. The controls are specified and reported in Section 5.3.6.

      TxDOT ensures the proper collection and disposal of unused pesticides, herbicides, and fertilizers as specified in Section 5.3.6.

      TxDOT reports these activities in Section 5.3.6.

6.0 MONITORING AND EVALUATION

6.1 Permit Requirements

The permittee shall, in areas previously permitted under a Phase I permit, develop and implement an Alternate Stormwater Assessment Program (See Part III.B.2(i)(5)) and continue implementing a floatables monitoring and reduction program. The program must include:

1. **Dry weather screening** – The permittee shall continue to screen and detect the presence of illicit discharges to its MS4 (See Part III.B.2(i)(5)).

2. **Evaluation of water quality** – The permittee shall continue to evaluate the watershed using existing stormwater characterization data. This evaluation must be conducted in the existing Phase I areas where the permittee was previously responsible for outfall or watershed monitoring under the Wet Weather Characterization program and must include available data for the pollutants previously monitored by the permittee under its Phase I permits, as listed in Attachment 3. The results of the evaluation must be submitted with the year 4 annual report. Phase I areas under this requirement include: TxDOT Beaumont (WQ0004644000), City of San Antonio (WQ0004284000), TxDOT Austin (WQ0004645000), City of Houston (WQ0004685000), TxDOT Houston District (Pasadena) (WQ0004520000), City of Fort Worth (WQ0004350000), City of Arlington (WQ0004635000), and City of Dallas (WQ0004521000). (See Part III.B.2(i)(5)).

3. **Floatables monitoring** - The permittee shall continue to implement a program to reduce the discharge of floatables (e.g. litter and other human generated solid refuse) into the MS4, which must include source controls and, where necessary, structural controls and other appropriate controls. The amount of material collected shall be estimated by weight, volume, or by other practical means. Results shall be included in the statewide annual report.

6.2 Program Overview

TxDOT will, in areas previously permitted under a Phase I permit, continue dry weather screening, perform an evaluation of water quality through the development and implementation of an Alternate Stormwater Assessment Program (See Part III.B.2(i)(5) of Permit No. WQ0005011000), and continue implementing a floatables monitoring and reduction program.

6.3 Best Management Practices and Measurable Goals

6.3.1 Dry weather screening

TxDOT will continue to screen and detect the presence of illicit discharges to its MS4 as defined in Section 2.3.9 of this SWMP. This evaluation will be conducted in the existing Phase I areas.

This permit requirement is performed and reported in Section 2.3.9 above.
6.3.2 Evaluation of water quality

TxDOT will continue to evaluate the watershed using existing stormwater characterization data. This evaluation will be conducted in the existing Phase I areas where the permittee was previously responsible for outfall or watershed monitoring under the Wet Weather Characterization program and will include available data for the pollutants previously monitored by the permittee under its Phase I permits, as listed in Attachment 3 of Permit No. WQ0005501000. The results of the evaluation will be submitted with the year 4 annual report. Phase I areas under this requirement include: TxDOT Beaumont (WQ0004644000), City of San Antonio (WQ0004284000), TxDOT Austin (WQ0004645000), City of Houston (WQ0004685000), TxDOT Houston District (Pasadena) (WQ0004520000), City of Fort Worth (WQ0004350000), City of Arlington (WQ0004635000), and City of Dallas (WQ0004521000). (See Part III.B.2(i)(5)) as defined in Section 2.3.9 of this SWMP.

This permit requirement is performed and reported in Section 2.3.9 above.

6.3.3 Floatables Monitoring

TxDOT’s previously issued Phase I permits required the implementation of a program to reduce the discharge of floatables (for example, litter and other human generated solid refuse) into the TxDOT MS4. To assure compliance with TxDOT TPDES permit requirements, TxDOT has and will continue to implement a program to reduce the discharge of floatables (for example, litter and other human generated solid refuse) into the TxDOT MS4, which will include source controls and, where necessary, structural controls and other appropriate controls.

TxDOT implements a statewide program including the “Don’t Mess with Texas” campaign, the “Adopt-a-Highway” program, and street sweeping to reduce the discharge of floatables into its statewide MS4. The program primarily uses litter pickup, monitoring, and source control to reduce floatables.

TxDOT hires private contractors to perform street sweeping on TxDOT roadways throughout the permitted areas. Most of the street sweeping is vacuum-assisted which provides the greatest level of particulate recovery. In addition, TxDOT compiles data (i.e., litter weight) from the “Adopt-a-Highway” Program and reports the quantity to TCEQ in annual reports.

TxDOT also tracks annual expenditures for the DMWT program which will be included in the annual reports.

This permit requirement is performed and reported in Section 1.3.1, 1.3.2, 1.3.3, 5.3.4, 5.3.6, and 5.3.7 above.

</tbody>
</table>

THE FOLLOWING BMPs WILL BE PERFORMED ONLY IN PREVIOUSLY PERMITTED PHASE I AREAS
7.0 IMPAIRED WATER BODIES AND TOTAL MAXIMUM DAILY LOAD (TMDL) REQUIREMENTS

7.1 Permit Requirement

Discharges of the pollutant(s) of concern (POC(s)) to impaired water bodies for which there is a TCEQ and EPA approved total maximum daily load (TMDL) are not eligible for this permit unless they are consistent with the approved TMDL. A water body is impaired for purposes of the permit if it has been identified, pursuant to the latest TCEQ and EPA approved CWA §303(d) list or identified in the Index of Water Quality Impairments in the Integrated Report of Surface Water Quality for Clean Water Act Sections 305(b) and 303(d), as not meeting Texas Surface Water Quality Standards.

The permittee shall control the discharges of POC(s) to impaired waters and waters with approved TMDLs as provided in sections (a) and (b) below, and shall assess the progress in controlling those pollutants.

(a) Discharges to Water Quality Impaired Water Bodies with an Approved TMDL

For any portion of the MS4 that discharges to a portion of a watershed with an approved TMDL, where stormwater has the potential to cause or contribute to the impairment, the permittee shall include in the SWMP controls targeting the POC(s) along with any additional or modified controls required in the TMDL and this section.

The SWMP and required annual reports must include information on implementing any targeted controls required to reduce the POC(s) as described below:

(1) Targeted Controls

The SWMP must include a detailed description of all targeted controls to be implemented, such as identifying areas of focused effort or implementing additional Best Management Practices (BMPs) to reduce the POC(s) in the impaired waters.

(2) Measurable Goals

For each targeted control, the SWMP must include a measurable goal and an implementation schedule describing BMPs to be implemented during each year of the permit term.

(3) Identification of Benchmarks

The SWMP must identify a benchmark for the POC(s). Benchmarks are designed to assist in determining if the BMPs established are effective in addressing the POC(s) in stormwater discharge(s) from the MS4 to the maximum extent practicable (MEP). The BMPs addressing the POC(s) must be re-evaluated on an annual basis for progress towards the benchmarks and modified as necessary within an adaptive management framework. These benchmarks are not numeric effluent limitations or permit conditions but intended to be guidelines for evaluating progress towards reducing pollutant discharges consistent with the benchmarks. The exceedance of a
benchmark is not a permit violation and does not in itself indicate a violation of instream water quality standards.

The benchmark must be determined based on one of the following options:

a. If the MS4, or a portion there of, is subject to a TMDL that identifies a Waste Load Allocation(s) (WLA) for permitted MS4 stormwater sources, then the SWMP may identify it as the benchmark. Where an aggregate allocation is used as a benchmark, all affected MS4 operators are jointly responsible for progress in meeting the benchmark and shall (jointly or individually) develop a monitoring/assessment plan as required in Part II.D.3(a)(6).

b. Alternatively, if multiple MS4s are discharging into the same impaired watershed with an approved TMDL, with an aggregate WLA for all permitted stormwater MS4s, then the MS4s may combine or share efforts to determine an alternative sub-benchmark for the POC (e.g., bacteria) for their respective MS4. The SWMP must clearly define this alternative approach and must describe how the sub-benchmark would cumulatively support the aggregate WLA. Where an aggregate benchmark has been broken into sub-benchmarks for individual MS4s, each permittee is only responsible for progress in meeting its sub-benchmark.

(4) Statewide Annual Report

The annual report must include an analysis of how the selected BMPs will be effective in contributing to achieving the benchmark.

(5) Impairment for Bacteria

If the POC is bacteria, the permittee shall include focused BMPs addressing the below areas, as applicable, in the SWMP and implement as appropriate. If a TMDL Implementation Plan (I-Plan) is available, the permittee may refer to the I-Plan for appropriate BMPs. The SWMP and annual report must include the selected BMPs. The permittee may not exclude BMPs associated with the minimum control measures required under 40 CFR §122.34 from its list of proposed BMPs. Proposed BMPs will be reviewed by the executive director during the SWMP review and approval process.

The BMPs shall, as appropriate, address the following:

a. Sanitary Sewer Systems;

b. On-site Sewage Facilities;

c. Illicit Discharges and Dumping from septic systems, grease traps, grit traps, or other sources; and

d. Animal Sources such as pet waste from rest areas.

(6) Monitoring or Assessment of Progress

The permittee shall monitor or assess progress in achieving benchmarks and determine the effectiveness of BMPs, and shall include documentation of this
monitoring or assessment in the SWMP and annual reports. In addition, the SWMP must include methods to be used.

a. The permittee may use either of the following methods to evaluate progress towards the benchmark and improvements in water quality:

(i) Evaluating Program Implementation Measures

The permittee may evaluate and report progress towards the benchmark by describing the activities and BMPs implemented, by identifying the appropriateness of the identified BMPs, and by evaluating the success of implementing the measurable goals.

The permittee may assess progress by using program implementation indicators, such as: (1) number of sources identified or eliminated; (2) decrease in number of illegal dumping; (3) increase in illegal dumping reporting; (4) success associated with the Don’t Mess With Texas program campaign and how many times the public accessed the website; or, (5) increase in illegal discharge detection through dry screening, etc.; or

(ii) Assessing Improvements in Water Quality

The permittee may assess improvements in water quality by using available data for segment and assessment units of water bodies from other reliable sources such as the wet weather watershed program or other sources, or by proposing and justifying a different approach such as collecting additional instream or outfall monitoring data, etc. Data may be acquired from TCEQ, local river authorities, partnerships (such as regional watershed monitoring efforts), and/or other local efforts as appropriate.

b. Progress towards achieving the benchmark shall be reported in the annual report. Annual reports shall report the benchmark and the year(s) during the permit term that the MS4 conducted additional sampling or other assessment activities.

(7) Observing no Progress Towards the Benchmark

If, by the end of the third year from the effective date of the permit, the permittee observes no progress toward the benchmark either from program implementation or water quality assessments as described in Part II.D.3(a)(6), the permittee shall identify alternative focused BMPs that address new or increased efforts towards the benchmark or, as appropriate, shall develop a new approach to identify the most significant sources of the POC(s) and shall develop alternative focused BMPs for those (this may also include information that identifies issues beyond the MS4’s control). These revised BMPs must be included in the SWMP and subsequent annual reports.

Where the permittee originally used a benchmark based on an aggregated WLA, the permittee may combine or share efforts with other MS4s discharging to the same watershed to determine an alternative sub-benchmark for the POC(s) for their
respective MS4s, as described in Part II.D3(a)(3)b. above. Permittees must document, in their SWMP for the next permit term, the proposed schedule for the development and subsequent adoption of alternative sub benchmark for the POC(s) for their respective MS4s and associated assessment of progress in meeting those individual benchmarks.

(b) Discharges Directly to Water Quality Impaired Water Bodies without an Approved TMDL

The permittee shall also determine whether any portion of the MS4 discharges directly to one or more water quality impaired water bodies where a TMDL has not yet been approved by TCEQ and EPA. If the permittee discharges directly into an impaired water body without an approved TMDL, the permittee shall perform the following activities for the areas of the MS4 subject to these requirements:

(1) Discharging a Pollutant of Concern

   a. Within the first year following the permit effective date, the permittee shall determine whether the MS4 may be a source of the POC(s) by referring to the CWA §303(d) list and then determining if discharges from the MS4 would be likely to contain the POC(s) at levels of concern.

   b. If the permittee determines that the MS4 may discharge the POC(s) to an impaired water body without an approved TMDL, the permittee shall, no later than two years following the permit effective date, ensure that the SWMP includes focused BMPs, along with corresponding measurable goals, that the permittee will implement, to reduce, the discharge of POC(s) that contribute to the impairment of the water body.

   c. In addition, no later than three years following the permit effective date, the permittee shall submit written notification to TCEQ to amend the SWMP to include any additional BMPs to address the POC(s).

(2) Impairment of Bacteria

Where the impairment is for bacteria, the permittee shall identify potential significant sources and develop and implement focused BMPs for those sources. The permittee may at the very least address the sources listed in Part II.D.3(a)(5).

(3) The annual report must include information on compliance with this section, including results of any sampling conducted by the permittee.
7.2 Program Overview

TxDOT will identify outfalls within its regulated MS4 areas that will discharge directly into impaired water bodies using the latest TCEQ and EPA approved CWA §303(d) list within the first permit year. TxDOT will also identify the associated POCs within these segments during the first permit year. If additional BMPs are needed, TxDOT will revise the SWMP within the second permit year. TxDOT will perform the procedures described in the following “Water Quality Impaired Water Bodies (WQIWB) and Total Maximum Daily Load (TMDL) Best Management Practices (BMPs) Flow Chart” in Attachment K.

7.3 Best Management Practices and Measurable Goals

7.3.1 Discharges to Water Quality Impaired Water Bodies with an Approved TMDL

TxDOT will assess if its MS4 area draining to an impaired water body has the potential to cause or contribute to the impairment within the first permit year from the effective date of the permit and report its findings in the second year annual report. TxDOT will utilize the most recent list of impaired water bodies and EPA approved TMDL as well as current pending TMDLs and approved or pending Implementation Plans (I-Plans) made available by TCEQ. Tables 7.2 and 7.3 list the EPA approved TMDLs and approved or pending Implementation Plans (I-Plans), and impaired water bodies as defined by the TCEQ in the 2014 Texas Integrated Report - Texas 303(d) List (Category 5). If the assessment indicates that TxDOT’s operations may potentially contribute as a source of an adopted TMDL POC, TxDOT will revise Table 7.2 and Table 7.3 with appropriate TxDOT BMPs and report them in the annual report.

For any portion of the TxDOT MS4 that discharges to a portion of a watershed with an approved TMDL, where stormwater has the potential to cause or contribute to the impairment, TxDOT will include in the SWMP, controls targeting the POCs, along with any additional or modified controls required in the TMDL and this section.

The SWMP and required annual reports will include information on implementing any targeted controls required to reduce the POCs as described below:

1) Targeted Controls

Targeted Controls are listed in Table 7.4 and include Focused Effort/Additional BMPs, POCs, Benchmark Goals/Measurable Goals, and Implementation Schedules).

TxDOT will identify areas of focused effort or identify additional BMPs that will be implemented to reduce the POCs in the impaired waters.

2) Measurable Goals

For each targeted control (See Table 7.4), TxDOT will include a measurable goal and an implementation schedule describing BMPs to be implemented during each year of the permit term.
3) Identification of Benchmarks

Because TxDOT’s regulated area may be located within several watersheds, TxDOT will identify a benchmark goal (see Table 7.1) for the identified POC based on the watershed and TxDOT’s district locations with one of the following options:

a) If the TxDOT regulated area is subject to a TMDL that identifies an aggregate WLA for all permitted MS4 stormwater sources, then TxDOT will identify such aggregate WLA as the benchmark. TxDOT will coordinate with other affected MS4 operators and will be jointly responsible for progress in meeting the benchmark goal and/or will jointly develop a monitoring/assessment plan according to the approved I-Plan; or,

b) Alternatively, if multiple MS4s are discharging into the same impaired water body with an approved TMDL, with an aggregate WLA for all permitted stormwater MS4s, then TxDOT may combine or share efforts to determine an alternative sub-benchmark goal for the pollutant(s) of concern for the TxDOT MS4. TxDOT will clearly define this alternative approach and will describe how the sub-benchmark goals would cumulatively support the aggregate WLA as defined in the approved I-Plan. TxDOT will be responsible for progress in meeting its WLA sub-benchmark goal; or,

c) Alternatively, if multiple MS4s are discharging into the same impaired water body with an approved TMDL, with an aggregate WLA for all permitted stormwater MS4s, then TxDOT may combine or share efforts to determine an alternative sub-benchmark goal for the pollutant(s) of concern for the TxDOT MS4. TxDOT will clearly define this alternative approach and will describe how the sub-benchmark goals would cumulatively support the aggregate WLA as defined in the approved I-Plan. TxDOT will be responsible for progress in meeting its WLA sub-benchmark goal; or,

d) If the TxDOT regulated area is subject to an individual WLA specifically assigned to TxDOT, this individual WLA will be the benchmark goal. TxDOT will be responsible for progress in meeting its WLA benchmark goal as defined in the approved I-Plan.

4) Statewide Annual Report

The annual report will include an analysis of how the selected BMPs will be effective in contributing to achieving the benchmark goal.

5) Impairment for Bacteria

If the POC is bacteria, TxDOT will evaluate the following potential sources, as listed in the Permit No. WQ0005011000, if located within TxDOT’s Regulated area:

a) Sanitary Sewer Systems;

b) On-site Sewage Facilities;
c) Illicit Discharges and Dumping from septic systems, grease traps, grit traps; and,

d) Animal Sources such as pet waste from rest areas.

TxDOT does not own or operate sanitary sewer systems or on-site sewage facilities within its regulated area. Illicit Discharges from septic systems, grease traps, and grit traps do not originate from the TxDOT MS4; rather, the illicit discharges originate from adjacent MS4s and third-party discharges into the TxDOT MS4. In addition, there are no rest areas constructed within TxDOT’s MS4 regulated area; therefore pet wastes are not a potential source of bacteria to the TxDOT MS4.

To further identify potential animal sources for bacteria on TxDOT’s regulated area, TxDOT utilizes current research studies performed by the Bacteria Sources Tracking (BST) group of the Texas Water Resources Institute (TWRI), and TxDOT’s own research programs.

Bacteria Sources Tracking (BST) is a new methodology that is currently being used to determine the sources of fecal bacteria in environmental samples (e.g., from human, livestock or wildlife origins, and faulty on-site waste disposal systems). The BST group¹ has compiled a bacteria DNA library that includes bacteria pollution indicators and fecal bacteria source indicators to quantify possible impacts to water from animal and sewage wastes. The BST’s research indicates that Escherichia coli (E. Coli), Total Coliform (TC), and Fecal Coliform (FC) sources are associated with the gastrointestinal tracts of humans and warm-blooded animals while Fecal Streptococci (FS) and Enterococci Groups sources of bacteria are in animal feces.

Recently approved I-Plans have indicated that birds nesting under and near bridges do not contribute to elevated levels of bacteria, and that their contribution to stream segments would be considered background concentrations. The background concentration level contributed by birds roosting under bridges has been shown to be insignificant when compared to the major sources listed in the BST studies.

Deterring the building of nests under bridges and box culverts is not considered a permanent mitigation of the potential bacteria source since birds can also build nests in the trees next to TxDOT bridges.

As shown above, TxDOT’s regulated area is not a major source of bacteria. TxDOT will implement necessary BMPs, as identified in the approved Implementation Plan (I-Plan) that is assigned to TxDOT, to reduce bacteria to the maximum extent practicable (MEP), in those stream segments with approved TMDLs.

6) Monitoring or Assessment of Progress

¹ Texas Water Resources Institute at Texas A&M University.
TxDOT will monitor or assess progress in achieving benchmark goals and determining the effectiveness of BMPs, and will include documentation of this monitoring or assessment in the annual reports. TxDOT may utilize the following methods to accomplish the assessment:

a) TxDOT may assess progress by using program implementation indicators such as:
   - Number of sources identified or eliminated;
   - Decrease in amount of illegal dumping;
   - Increase in illegal dumping reporting;
   - "Don’t Mess With Texas" campaign and web accessed;
   - “Adopt-a-Highway” program; or,
   - Increase in illegal discharge detection through dry screening, etc.

b) Assessing Improvements in Water Quality

TxDOT will assess improvements in water quality by using available data for the segment and assessment units of water bodies from other reliable sources, or by proposing and justifying a different approach such as collecting additional instream or outfall monitoring data, etc. Data may be acquired from TCEQ, local river authorities, partnerships, and/or other local efforts as appropriate.

Progress toward achieving the benchmark goal will be reported in the annual report. Annual reports will include the benchmark goal and the year(s) during the permit term if TxDOT conducted additional sampling or other assessment activities.

7) Observing no Progress Toward the Benchmark Goal

If, by the end of the I-Plan implementation goals period, TxDOT observes no progress toward the benchmark goal either from program implementation or water quality assessments as described above, TxDOT will identify alternative focused BMPs that address new or increased efforts towards the benchmark goal or, as appropriate, will develop a new approach to identify the most significant sources of POCs and will develop alternative focused BMPs for those (this may also include information that identifies issues beyond the MS4’s control). These revised BMPs will be included in the SWMP and subsequent annual reports.
7.3.2 Discharges Directly to Water Quality Impaired Water Bodies Without an Approved TMDL

TxDOT will determine whether any portion of the MS4 discharges directly to one or more water quality impaired water bodies where a TMDL has not yet been approved by TCEQ and EPA. If TxDOT discharges directly into an impaired water body without an approved TMDL, TxDOT will perform the following activities for the areas of the MS4 subject to these requirements:

1) Discharging a Pollutant of Concern
   a) Within the first year following the permit effective date (November 30, 2017), TxDOT will determine whether the MS4 may be a source of the POCs by referring to the CWA §303(d) list and then determining if discharges from the MS4 would be likely to contain the POCs at levels of concern. This activity will be performed in the first permit year and will be reported in the second year annual report.
   b) If TxDOT determines that the MS4 may discharge the POCs to an impaired water body without an approved TMDL, TxDOT will, no later than two years following the permit effective date, ensure that the SWMP includes focused BMPs, along with corresponding measurable goals, that TxDOT will implement, to reduce, the discharge of POCs that contribute to the impairment of the water body. This activity will be reported in the third year annual report.
   c) In addition, no later than three years following the permit effective date, TxDOT will submit written notification to TCEQ to amend the SWMP to include any additional BMPs to address the POCs. This activity will be reported in the fourth year annual report.

Table 7.3 provides an example of the analysis. Table 7.3 will be updated to reflect the above determination.

2) Impairment of Bacteria

Where the impairment is for bacteria, TxDOT will identify potential significant sources and develop and implement targeted BMPs for those sources. TxDOT will implement the focused BMPs listed above.

3) Annual Report

The annual report will include an analysis of how the selected BMPs will be effective in contributing to achieving the benchmark goal.

** POC that TxDOT MS4 may have potential to contribute to the impairment.
8.0 DISCHARGES TO THE EDWARDS AQUIFER RECHARGE ZONE

8.1 Permit Requirement

Discharges of stormwater from the MS4, and other non-stormwater discharges, are not authorized by this permit where those discharges are prohibited by 30 TAC Chapter 213 (Edwards Aquifer Rule). New discharges located within the Edwards Aquifer Recharge Zone, or within that area upstream from the recharge zone and defined as the Contributing Zone, must meet all applicable requirements of, and operate according to, 30 TAC Chapter 213 (Edwards Aquifer Rule) in addition to the provisions and requirements of this permit. For existing discharges, the requirements of the agency-approved Water Pollution Abatement Plan (WPAP) under the Edwards Aquifer Rule are in addition to the requirements of this permit. BMPs and maintenance schedules for structural stormwater controls, for example, may be required as a provision of the rule.

The permittee’s agency-approved WPAPs that are required by the Edwards Aquifer Rule must be referenced in the SWMP. Additional agency-approved WPAPs received after the SWMP submittal must be recorded in the annual report for each respective permit year. For discharges originating from the MS4 permitted area, and located on or within ten stream miles upstream of the Edwards Aquifer Recharge Zone, applicants must also submit written notification to the appropriate TCEQ regional office.

Counties: Comal, Bexar, Medina, Uvalde, and Kinney Contact:

TCEQ, Water Program Manager
San Antonio Regional Office 14250 Judson Road
San Antonio, Texas 78233-4480
(210) 490-3096

Counties: Williamson, Travis, and Hays Contact:

TCEQ, Water Program Manager
Austin Regional Office
12100 Park 35 Circle, Bldg. A, Rm 179
Austin, Texas 78753
(512) 339-2929
8.2 Implementation Overview

All the special precautions and requirements of the Edwards Rules are specifically related to the type of geology in the area of proposed construction. These geologic conditions are rare and are only present in isolated areas of the state’s central region.

For purposes of implementation of this SWMP, TxDOT makes clear that the Edwards Rules only apply to three TxDOT Districts. The boundaries of these districts have at least one roadway corridor that coincides with the TCEQ designation of Edwards Aquifer Recharge Zone (RZ) or Contributing Zone (CZ) boundaries. Figure 8.1 displays the Edwards Aquifer Zones.

Below are the TxDOT Districts and the Counties of those Districts where the Edwards Rules apply:

- Austin District – Williamson, Travis and Hays
- San Antonio District – Comal, Bexar, Medina and Uvalde
- Laredo District - Kinney (not in MS4 Area)

Within the areas listed above, if there is construction proposed in TxDOT ROW that is greater than a five-acre disturbance on the CZ; or any soil disturbance or regulated activity on the Recharge Zone; an application and coordinating documentation will be provided to the designated TCEQ Region office for review. This document can be either a Water Pollution Abatement Plan (WPAP); or if over the CZ a Contributing Zone Plan (CZP). These documents will describe the project proposed, the water quality mitigation, the maintenance of both temporary and permanent controls or the justification for any exception request thereof. The project will not commence until approved by the Executive Director through the Region office review.

8.3 Best Management Practices (BMP) and Measurable Goals

The project site will include BMPs to limit Total Suspended Solids (TSS). The TSS is calculated, using the prescribed methods within the TCEQ Guidance Manual (RG-348), for the site conditions and drainage character involved, requiring at least 80% TSS removal based on the new impervious cover proposed. Other additional or more specific practices may be imposed by TCEQ reviewers if the work is proximal to areas of exceptional sensitivity to ground water or endangered species.

The BMPs utilized may be any single or combination of devices listed in the TCEQ Guidance Manual that are approved mitigation techniques. Examples of temporary controls would include silt fence, rock berms, gabions, temporary traps or detention basins and temporary seeding (hydromulch). Permanent controls would include permanent wet ponds, filtration basins, detention ponds, grassy swales, vegetation filter strips, bio-filtration, various filtering devices built in-line of storm drains, hazardous material traps and porous pavement surfaces. In addition to gaining approval for the type of BMPs chosen, TxDOT will also commit to maintaining the effective operation of these permanent controls and provide periodic inspections for ongoing functionality.
The WPAP or CZP will be approved by the TCEQ. The approval letter from TCEQ represents that if all directives are followed, there is no foreseeable significant impact to water quality.

9.0 EXPENDITURES

9.1 Permit Requirements

2. Statewide Annual Report

(l) Annual expenditures for the reporting year, with a breakdown for the major elements of the SWMP, and the budget for the year (reporting year) following each annual report.

9.2 Program Overview

Allocations of funds for environmental controls, stormwater management, and training are projected to remain somewhat constant for the foreseeable future.

9.3 Best Management Practices and Measurable Goals

To be in compliance with the Expenditures requirement, TxDOT will include the following expenditures that are considered representatives of the funding spent on the stormwater management program:

MCM 1 – Public Education, Outreach, Participation, and Involvement;
MCM 2 – Illicit Discharge Detection and Elimination (IDDE);
MCM 3 – Construction Site Stormwater Runoff Control;
MCM 4 – Post-Construction Stormwater Management in Areas of New Development and Redevelopment;
MCM 5 – Pollution Prevention and Good Housekeeping for Transportation Operations;

The above expenditures and projected expenditures will be included in the annual report.

10.0 OTHER REQUIREMENTS

10.1 Permit Requirements

By the end of the permit term, TxDOT must have completed and submitted to TCEQ original U.S. Geological Survey topographic quadrangle maps, or similar topographic maps with a scale between 1:10,000 and 1:24,000, which clearly delineates the following information:

1) All points of discharge from the MS4 area that were not submitted with the TxDOT MS4 permit application received by TCEQ on March 18, 2013; and

2) The location of major structural controls for stormwater discharge, including detention/retention ponds, major infiltration devices, etc.

The TxDOT will submit the requested information with the statewide annual reports over the five year permit term, such that each annual report submittal includes 20 percent of the information required in this section.

10.2 Program Overview

The mapping of all points of discharge from the MS4 and location of major structural controls for stormwater discharge will be performed by TxDOT ENV.

10.3 Best Management Practices and Measurable Goals

TxDOT will complete 20 percent of the mapping per permit year.

10.4 Other Requirements Implementation Schedule Activity, and Measurable Goals

11.0 LEGAL AUTHORITY

The Texas Transportation Commission, as provided in Article 6673, Vernon’s Annotated Texas Statutes (V.A.T.S.), is authorized to plan, construct, operate, and maintain the state highways system in Texas. TxDOT is the state agency charged with carrying out this authorization. It is stated in Article 6674w-3, V.A.T.S., that TxDOT may acquire lands for the purpose, among many others, of draining any state highway. The statutes, along with rules set forth in the TAC, give TxDOT the power to construct, operate, and maintain a drainage system for state highways to accommodate the stormwater that originates within, and reaches highway ROWs.

TxDOT contracts with others for the construction, and sometimes for the maintenance, of these systems. Article 6674k, V.A.T.S., provides that the form of such contracts must be prescribed by the Texas Transportation Commission and may contain language advantageous to the state. The department may control these systems in this manner. Article 6673b, V.A.T.S., allows TxDOT to enter into necessary contracts with cities regarding various aspects of state highways within their corporate limits. TxDOT, through the TAC, has adopted rules governing these agreements. As a result, there are municipal maintenance agreements with cities that outline the responsibilities regarding, among other things, the maintenance of the highways, which would include the maintenance of the drainage systems appurtenant to the highways.

The TAC further provides that, when others desire to cross highways with a drainage facility, the design, construction, operation, and maintenance of the facility must be acceptable to TxDOT. The statutes of the State of Texas give TxDOT the power to control virtually all of the activities occurring within the ROW, but there is little, if any, authority to regulate discharges occurring off the ROW and flowing into state maintained drainage systems.
12.0 RESOURCES

TxDOT provides adequate funds, staff, equipment, and support capabilities to implement its activities under this SWMP. TxDOT spends program funding on litter removal, street sweeping, spot litter pick-up, “Adopt-a-Highway” programs, vegetation control, ditch maintenance, culvert and storm drain maintenance, stormwater pump station maintenance, and channel maintenance. The cost of TxDOT environmental and stormwater training classes are charged to the overhead accounts of each section trained and are not specifically tracked for stormwater costs. Public involvement and education programs are mostly funded by TxDOT’s administration in Austin. In addition, some minor funding for employees has come out of the overhead of the district’s Advance Transportation Planning section. All funding for stormwater maintenance costs, administration, training, and public involvement and education originates with the Texas Legislature and is allocated by this legislature to the department.

If warranted, District-specific controls will be developed and implemented in accordance with TxDOT’s TPDES permit.
13.0 SWMP REVIEW AND UPDATES

The SWMP will be evaluated annually to determine the plan’s effectiveness and efficiency. The SWMP will be revised as necessary to support needed changes based on the SWMP evaluation and/or requests made through permit requirements. The annual review of the current SWMP will be conducted in conjunction with the preparation of the annual report required under this permit. If required, the SWMPs will be revised by TxDOT during the term of the permit in accordance with the approved permit procedures.

If warranted, additional District-specific controls will be developed and implemented in accordance with TxDOT's TPDES Permit.
14.0 RECORDKEEPING

14.1 Permit Requirements

Section B. Recordkeeping

1) The permittee shall retain all records, a copy of this TPDES permit, and records of all data used to complete the application for this permit and to satisfy the public participation requirements, for a period of at least three (3) years, or for the remainder of the term of this permit, whichever is longer. This period may be extended by a request from the executive director at any time.

2) The permittee shall submit the records to the executive director only when specifically asked to do so. The statewide SWMP required by this permit (including a copy of this permit) must be retained at a location accessible to the TCEQ.

3) The permittee shall make the application and the statewide SWMP available to the public at reasonable times during regular business hours, if requested to do so in writing. Copies of the SWMP must be made available within ten (10) working days of receipt of a written request. Other records must be provided in accordance with the Texas Public Information Act. However, all requests for records from federal facilities must be made in accordance with the Freedom of Information Act.

4) The period during which records are required to be kept shall be automatically extended to the date of the final disposition of any administrative or judicial enforcement action that may be instituted against the permittee.

14.2 Program Overview

TxDOT retains the SWMP and all associated records for at least three years after coverage under this permit terminates.

14.3 Best Management Practices and Measurable Goals

TxDOT will maintain all SWMP records for a minimum of three years.

14.4 Recordkeeping Implementation Schedule Activity, and Measurable Goal

ATTACHMENT A

TCEQ/TxDOT MOU
Texas Department of Transportation

(1) If the program provider determines that an individual's behavior may require the implementation of behavior management techniques involving intrusive interventions or restriction of the individual's rights, the program provider must comply with this subsection.

(i) The program provider must:
(A) obtain an assessment of the individual's needs and current level and severity of the behavior;
(B) ensure that a service provider of behavioral support services:
   (i) develops, with input from the individual, LAR, program provider, and actively involved persons, a behavior support plan that includes the use of techniques appropriate to the level and severity of the behavior; and
   (ii) considers the effects of the techniques on the individual's physical and psychological well-being in developing the plan.

(ii) The behavior support plan must:
(A) describe how the behavioral data concerning the behavior is collected and monitored;
(B) allow for the decrease in the use of the techniques based on the behavioral data; and
(C) allow for revision of the plan when desired behavior is not displayed or the techniques are not effective.

(2) Before implementation of the behavior support plan, the program provider must:
(A) obtain written consent from the individual or LAR to implement the plan;
(B) provide written notification to the individual or LAR of the right to discontinue implementation of the plan at any time; and
(C) notify the individual's service coordinator of the plan.

(3) The program provider may accrue an expense for necessary items and services for which the individual's personal funds are not available for payment, such as room and board, medical and dental services, legal fees or fines, and essential clothing.

(4) If an expense is accrued as described in paragraph (3) of this subsection, the program provider must enter into a written payment plan with the individual or LAR for reimbursement of the funds.

(5) If the program provider determines that an individual's behavior involves the misappropriation or misused of restraint, use of seclusion, or abuse, neglect, or exploitation of an individual, the program provider must:
(A) notify the service coordinator of the individual's needs and current level and severity of the behavior;
(B) provide written notification to the individual or LAR of the right to discontinue implementation of the plan at any time; and
(C) notify the individual's service coordinator of the plan.

(6) The program provider must, at least annually:
(A) review the effectiveness of the techniques and determine whether the behavior support plan needs to be continued, and
(B) notify the service coordinator if the plan needs to be continued.

(7) The program provider must report the death of an individual to DADS and the service coordinator by the end of the next business day following the death or the program provider's learning of the death and, if the program provider reasonably believes that the LAR does not know of the individual's death, to the LAR as soon as possible, but not later than 24 hours after the program provider learns of the individual's death.

(8) A program provider must not discharge or otherwise retaliate against:
(A) a staff member, service provider, individual, or other person who files a complaint, presents a grievance, or otherwise provides good faith information relating to the:
   (i) misuse of restraint by the program provider;
   (ii) use of seclusion by the program provider; or
   (iii) possible abuse, neglect, or exploitation of an individual; or
(B) an individual because someone on behalf of the individual files a complaint, presents a grievance, or otherwise provides good faith information relating to the:
   (i) misuse of restraint by the program provider;
   (ii) use of seclusion by the program provider; or
   (iii) possible abuse, neglect, or exploitation of an individual.

(9) A program provider must enter critical incident data in CARE no later than 30 calendar days after the last day of the month being reported.

This agency hereby certifies that the adoption has been reviewed by legal counsel and found to be a valid exercise of the agency's legal authority.

Filed with the Office of the Secretary of State on April 23, 2013.

TITLE 43. TRANSPORTATION
PART 1. TEXAS DEPARTMENT OF TRANSPORTATION
CHAPTER 2. ENVIRONMENTAL REVIEW OF TRANSPORTATION PROJECTS

ADOPTED RULES May 10, 2013 38 TexReg 2859
The Texas Department of Transportation (department) adopts the repeal of §2.23, Memorandum of Understanding with the Texas Natural Resource Conservation Commission. The department simultaneously adopts the replacement of the repealed section with new Subchapter I, §§2.301 – 2.308, Memorandum of Understanding with the Texas Commission on Environmental Quality. The repeal of §2.23 and new §§2.301 – 2.308 are adopted without changes to the proposal as published in the February 15, 2013, issue of the Texas Register (38 TexReg 801) and will not be republished.

EXPLANATION OF ADOPTED REPEAL AND NEW SECTIONS
Transportation Code, §201.607 requires the department to adopt a memorandum of understanding (MOU) with each state agency that has responsibilities for the protection of the natural environment or for the preservation of historic or archeological resources. Transportation Code, §201.607 also requires the department to adopt the MOU and all revisions to it by rule and to periodically evaluate and revise the MOU. In order to meet the legislative intent and to ensure that natural resources are given full consideration in accomplishing the department’s activities, the department has evaluated its MOU with the Texas Commission on Environmental Quality (TCEQ) adopted in 2002 and finds it necessary to repeal existing §2.23 and simultaneously adopt new Subchapter I, §§2.301 – 2.308.

The new MOU between TCEQ and the department satisfies the statutory requirements for reviewing and revising MOUs with resource agencies. It is intended to replace the existing MOU, which has been in effect since March 21, 2002, with an MOU that more effectively streamlines TCEQ’s review of the department’s projects and simultaneously better allows TCEQ to focus on those projects most likely to affect natural resources. The MOU is better organized than the existing MOU, with different subject areas broken into separate sections. The MOU recognizes that the legislature changed the name of the Texas Natural Resource Conservation Commission to the Texas Commission on Environmental Quality. Additionally, the MOU reflects changes made by the department’s recent revision of its environmental review rules, published in the March 9, 2012, issue of the Texas Register (37 TexReg 1727).

SECTION BY SECTION EXPLANATION OF MOU
Section 2.301 sets out the purpose of the MOU, to provide a formal mechanism by which TCEQ reviews transportation projects that have the potential to affect resources within TCEQ’s jurisdiction.
Section 2.302 sets forth the statutory authority for TxDOT and TCEQ to enter into the MOU.
Section 2.303 contains definitions of various terms used in the MOU.
Section 2.304 sets forth the statutory responsibilities of TxDOT and TCEQ that are relevant to the purpose of the MOU.
Section 2.305 sets forth procedures for determining whether the department is required to coordinate a given transportation project with TCEQ. TxDOT will not coordinate a project that TxDOT classifies as a categorical exclusion, blanket categorical exclusion, or programmatic categorical exclusion under §2.61 or §2.62 of Transportation Code, §201.607. TxDOT will coordinate a project for which TxDOT prepares an environmental assessment unless TxDOT has already coordinated an environmental report (discussed below) concerning the project and certain other conditions are met. TxDOT will coordinate a project for which TxDOT prepares an environmental impact statement. TxDOT will coordinate a reevaluation concerning a project if the earlier coordination concerning the project is no longer valid as a result of changes in the project.
Section 2.305(a) recognizes TxDOT’s new procedures that allow TxDOT to prepare an environmental report, which is a report, form, checklist, or other documentation analyzing an environmental issue in the context of a specific transportation project or presenting a thorough summary of an environmental study conducted in support of an environmental review document or demonstrating compliance with a specific environmental requirement. TxDOT’s recently-adopted rules authorize a project sponsor to prepare an environmental report and submit it for technical review before the environmental review document is completed (see, 43 TAC §2.45). Similarly, the MOU would allow, but not require, TxDOT to coordinate separately an environmental report with TCEQ. For projects for which TxDOT prepares an environmental assessment, the MOU would allow TxDOT to satisfy coordination requirements by coordinating an environmental report provided all of the conditions in §2.305(a)(2)(B) are met.
Section 2.305(b) contains triggers for determining when coordination is required for projects for which TxDOT prepares an environmental assessment. For example, coordination is required if a project will add capacity in a nonattainment or maintenance area of the state. Use of these triggers will allow TCEQ to focus its resources on reviewing those projects most likely to adversely affect natural resources.
Section 2.305(c) includes general provisions concerning compliance with law and the computation of time. The MOU would authorize TxDOT (but not a local government) to conduct the coordination with TCEQ.
Section 2.305(d) specifies the protocols for TxDOT transmitting an environmental report or environmental review document to TCEQ and then TCEQ transmitting back its comments on the document. TCEQ must submit its comments within 30 days, unless TCEQ gives notice that it is extending the deadline for no more than an additional 15 days. TxDOT will respond in writing to TCEQ’s comments and will ensure that the final version of the environmental review document describes the results of any coordination with and comments made by TCEQ.
Section 2.306 explains that TCEQ will provide publicly available information to TxDOT related to air quality so that TxDOT may incorporate such information into its analyses of how a project may impact air resources.
Section 2.307 states that TCEQ reserves all rights it has to enforce relevant laws and that the parties intend that TCEQ’s participation in this MOU does not have the effect of waiving those rights or the requirements of any laws that apply to the projects covered by the MOU. Also, the parties agree that the MOU does not preclude either party from making any legal argument.
Section 2.308 expresses the intent of TxDOT and TCEQ to update the MOU in the future as required by Transportation Code, §201.607, or as necessitated by a change in state and federal law or a change in the state implementation plan.

COMMENTS
No comments on the proposed repeal or new sections were received.

38 TexReg 2860 May 10, 2013 Texas Register
SUBCHAPTER B. MEMORANDA OF UNDERSTANDING WITH NATURAL RESOURCE AGENCIES

43 TAC §2.23

STATUTORY AUTHORITY

The repeal is adopted under Transportation Code, §201.101, which provides the Texas Transportation Commission with the authority to establish rules for the conduct of the work of the department, and more specifically, Transportation Code, §201.607(b), which requires the department to adopt memoranda of understanding with each agency that has responsibility for the protection of the natural environment or for the preservation of historical or archeological resources, and to adopt all revisions to these memoranda by rule.

CROSS REFERENCE TO STATUTE

Transportation Code, §201.607.

This agency hereby certifies that the adoption has been reviewed by legal counsel and found to be a valid exercise of the agency’s legal authority.

Filed with the Office of the Secretary of State on April 26, 2013.

CHAPTER 2. ENVIRONMENTAL REVIEW OF TRANSPORTATION PROJECTS

The Texas Department of Transportation (department) adopts the repeal of §2.24. Memorandum of Understanding with the Texas Historical Commission. The department simultaneously adopts and replaces the repealed section with new Subchapter H, §§2.251 - 2.278, Memorandum of Understanding with the Texas Historical Commission. The repeal of §2.24 and new §§2.251 - 2.278 are adopted without changes to the proposal as published in the February 15, 2013, issue of the Texas Register (38 TexReg 807) and will not be republished.

EXPLANATION OF ADOPTED REPEAL AND NEW SECTIONS

Transportation Code, §201.607 requires the department to adopt a memorandum of understanding (MOU) with each state agency that has responsibilities for the protection of the natural environment or for the preservation of historic or archeological resources. Transportation Code, §201.607 also requires the department to adopt the MOU and all revisions to it by rule and to periodically evaluate and revise the MOU. In order to meet the legislative intent and to ensure that historic and archeological resources are given full consideration in accomplishing the department’s activities, the department has evaluated its MOU with the Texas Historical Commission (THC), adopted in 2004, and finds it necessary to repeal existing §2.24 and simultaneously adopt new Subchapter H, §§2.251 - 2.278.

The new MOU between THC and the department satisfies the statutory requirements for reviewing and revising MOUs with resource agencies. It is intended to replace the existing MOU, which has been in effect since May 20, 2004, with an MOU that more effectively streamlines THC’s review of the department’s projects and simultaneously better allows THC to focus on those projects most likely to affect historic or archeological resources. The MOU has several new provisions and procedures that were developed based on experience gained from numerous projects that the department has submitted and THC has reviewed since the 2004 MOU was executed. It is also better organized than the existing MOU, with different subject areas broken into separate sections. Additionally, the MOU reflects changes made by the department’s recent revision of its environmental review rules, published in the March 9, 2012, issue of the Texas Register (37 TexReg 1727).

SECTION BY SECTION EXPLANATION OF MOU

Section 2.251 sets out the purpose of the MOU, identifies the statutory provisions under which the MOU is adopted, and explains that the MOU supersedes the 2004 MOU.

Section 2.252 sets forth the applicability of the MOU by explaining that it applies to any transportation project for which an environmental review is performed under the department’s environmental review rules and any other project coordinated at the department’s request. Whether coordination for a given project is required under the MOU is addressed in §2.255, concerning

ADOPTED RULES May 10, 2013 38 TexReg 2861

May 2017 - Revised February 2018
Coordination Responsibilities. §2.257, concerning Projects Excluded from Review for Archeological Resources and Cemeteries, and §2.270, concerning Projects Excluded from Review for Non-Archaeological Historic Properties. Section 2.252 also clarifies that federally funded, licensed, or permitted projects may follow the procedures described in this section of the MOU only if doing so would not conflict with the lead federal agency's environmental rules.

Section 2.253 explains that, for federal funded projects, the terms of a programmatic agreement among the department, the Federal Highway Administration, the Texas State Historic Preservation Office, and the Advisory Council on Historic Preservation, if applicable, will control rather than terms of the MOU. The section also oblates the department and THC to seek to revise the existing programmatic agreement to reflect the procedures of the MOU.

Section 2.254 contains definitions of various terms used in the MOU.

Section 2.255 sets forth the department's and THC's coordination responsibilities under the MOU. It explains that the department shall coordinate with THC on all transportation projects for which the department is the project sponsor under 43 TAC §2.7 unless the project is of a type that is exempt from coordination under another section of the MOU. Section 2.255 also specifies that coordination required by the MOU must be conducted by or through the department's Environmental Affairs Division, unless otherwise agreed to by THC. The section also clarifies that coordination of work in department right-of-way associated with a project for which the department is not the project sponsor under 43 TAC §2.7 is the responsibility of the project sponsor, and not the department, unless the department and THC agree that the department will coordinate the project. Finally, the section generally describes THC's coordination responsibilities under the MOU, such as to conduct any required review in an efficient manner.

Section 2.256 sets parameters on staff qualifications and the use of consultants for cultural resource investigations undertaken in accordance with the MOU. For example, all staff conducting such an investigation must meet certain professional standards detailed in the section.

Section 2.257 exempts certain types of routine projects from the requirement to conduct a project-specific review for impacts to archeological resources or cemeteries. Examples of exempt project types include installation, repair, or replacement of fencing, resurfacing, and replacement, upgrade, or repair of safety barriers. The section further explains that projects exempted from review under the MOU are also exempt from other THC rules regarding project-specific inspections or coordination for potential impacts to cemeteries, unless certain conditions are present.

Section 2.258 sets forth the procedures for project coordination when reviewing for archeological resources and cemeteries is required. If, after conducting an evaluation of the area for potential effects for a given project, the department determines that the project will not affect archeological historic properties and that the area of potential effects contains no cemeteries, the department may approve the project to proceed to construction without review by THC. The department must submit to THC a quarterly report of projects so evaluated and internally approved.

If the department determines that a given project may affect archeological historic properties, or that the area of potential effects contains a cemetery, the department must submit to the THC a request for review of the project. Section 2.259 explains the different types of findings, determinations, and recommendations that the department must include in its request for review. If the project will have an adverse effect on an archeological historic property or cemetery within the area of potential effects, the department must recommend to THC appropriate means by which to resolve the potential adverse effect. The section specifies the various forms the resolution of adverse effects may take and prescribes various requirements for cases in which data recovery is the selected means for resolving adverse effects. Finally, §2.258 sets parameters on when and how THC must respond to a request for review submitted by the department.

Section 2.259 contains provisions governing the department's investigations of a project's area of potential effects, including provisions for determining when field investigations are required and when background information such as maps and project area photographs may be used.

Section 2.260 sets forth procedures for THC's issuance of antiquities permits to the department. Under these procedures, the department is not required to submit an antiquities permit application provided that certain conditions are satisfied. Such as that the department provides THC with notification of the work and that the work is overseen by the archeological staff of the department's Environmental Affairs Division. The section also includes provisions allowing the department to initiate work under an emergency permit when conditions of natural disasters, man-made disasters, or post-review discovery necessitate immediate action. Provisions governing the department's work under permits issued by THC, such as provisions explaining when work under a permit will be considered complete, are also included in §2.260.

Section 2.261 contains provisions governing the department's conduct of surveys to investigate archeological resources and cemeteries. For example, the section explains that subsurface investigation is not required where it can be demonstrated that the portion of the site to be affected is not likely to have sufficient integrity to be eligible for designation as a State Antiquities Landmark.

Section 2.262 prescribes methods to be used by the department when conducting test excavations. The section allows the department to depart from the specified methods in cases where it is deemed appropriate, but requires the department to justify deviations in the resulting written report. Section 2.262 also requires data from test excavation projects to be made available to qualified researchers.

Section 2.263 requires the department, under certain conditions, to develop public educational outreach projects for significant data recovery investigations. Section 2.263 requires data from data recovery projects to be made available to qualified researchers.

Section 2.264 concerns exhumation, which is a form of investigation to resolve a project's adverse effects on a cemetery. The section explains when exhumation efforts may begin and identifies tasks that represent a sufficient, reasonable, and good faith effort to identify remains and any next of kin associated with burials in unknown or abandoned cemeteries.

Section 2.265 describes the procedures the department must follow when it discovers an archeological site after it has awarded a construction contract. The department must immediately suspend construction or any other activities that
Texas Department of Transportation

Stormwater Management Program

would affect the site and perform various specified tasks before resuming.

Section 2.266 concerns standard treatments for particular resource types. It sets forth standards to be followed by the department when encountering isolated wells or cisterns unassociated with other remains or burnt rock midden features that have not been obviously destroyed by modern disturbances.

Section 2.267 sets standards for the department's recovery and curation of artifacts. For example, while the department may temporarily house artifacts and samples during laboratory analysis and research, it must transfer them to a permanent curatorial facility upon completion of the analysis.

Section 2.268 establishes minimum documentation requirements for projects subject to review for archeological resources and cemeteries under the MOU.

Section 2.269 requires the department to submit to THC quarterly reports listing all projects for which the department documented that no historic properties are present in the area of potential effects or that the project will have no adverse effects on archeological historic properties or cemeteries.

Section 2.270 pertains to review for impacts to non-archeological historic properties. It lists a number of project types that pose limited potential to affect historic properties and provides that, for listed project types, if qualified department staff determine that no evaluation of a given project is needed, then none is required under the MOU or under other THC rules.

Section 2.271 explains the procedure for review of a project for impacts to archeological historic properties when an evaluation is required. The section sets forth two different levels of review: internal review and coordinated review. For a project subject to review for impacts to non-archeological historic resources, if department personnel determine that the project will have no effect or no adverse effect on historic properties, then only internal review is required. Such a project is required to be recorded on a quarterly report.

If a project is determined by department personnel to have an adverse effect on a historic property, then coordinated review is required. Under the §2.271 procedures, THC must respond within 20 calendar days of the department's request for review by indicating whether an affected historic property will require a historic structures permit or whether THC intends to initiate a State Antiquities Landmark nomination for the affected property. If THC does not respond within 20 days, the department may assume THC's concurrence with its determinations and proceed with construction of the project. Section 2.271 also contains provisions governing notification of work affecting a county courthouse, projects that may subsequently require a federal permit or change to federal funding and that involve a direct taking of an historic property, and required documentation both for projects internally reviewed and for projects for which coordinated review is conducted.

Section 2.272 explains that, in cases in which the department cannot gain access to private land needed to complete an investigation under the MOU prior to approval of the environmental review document, it must complete the investigation once access is obtained, but prior to any construction-related impacts.

Section 2.273 provides that if the department utilizes the procedures set forth in the MOU, then it will be considered to be in compliance with any other applicable THC requirements. In other words, with respect to department projects, the terms of the MOU control over THC's generally applicable rule requirements.

Section 2.274 specifies that any project-specific agreements reached between the department and THC will supersede the requirements of the MOU.

Section 2.275 obligates the department and THC to collaborate on improvements to their programs and development of innovative solutions for expedited review procedures, such as using project outcomes to refine approaches to resource identification, evaluation, treatment methods, programmatic mitigation measures and interagency agreements that facilitate early coordination, streamlining, and expedited review of the department's transportation projects.

Section 2.276 allows THC to review department project files for specific undertakings carried out under the MOU and recommend process improvements based on issues identified during the review.

Section 2.277 provides that THC and department staff will be responsible for attempting to resolve any conflict between THC and the department that results from the implementation of this subchapter before elevating to agency management.

Section 2.278 provides that THC and the department will convene every four years to review, update, or extend this agreement. This review cycle is shorter than the five-year review cycle prescribed by Transportation Code, §201.607(b).

COMMENTS

No comments on the proposed repeal or new sections were received.

SUBCHAPTER B. MEMORANDA OF UNDERSTANDING WITH NATURAL RESOURCE AGENCIES

43 TAC §2.24

STATUTORY AUTHORITY

The repeal is adopted under Transportation Code, §201.101, which provides the Texas Transportation Commission with the authority to establish rules for the conduct of the work of the department, and more specifically, Transportation Code, §201.607(b), which requires the department to adopt memoranda of understanding with each agency that has responsibility for the protection of the natural environment or for the preservation of historical or archeological resources, and to adopt all revisions to these memoranda by rule.

CROSS REFERENCE TO STATUTE

Transportation Code, §201.607.

This agency hereby certifies that the adoption has been reviewed by legal counsel and found to be a valid exercise of the agency's legal authority.

Filed with the Office of the Secretary of State on April 26, 2013.

Texas Commission on Environmental Quality
Interoffice Memorandum

To: Commissioners

Date: November 16, 2012

Thru: Bridget C. Bohac, Chief Clerk
Zak Covar, Executive Director

From: Brian Christian, Division Director
Small Business and Environmental Assistance

Docket No.: 2012-0004-RUL

Subject: Commission Approval for Rulemaking Adoption
Chapter 7, Memoranda of Understanding
HB 451: Don’t Mess with Texas Water Program
Rule Project No. 2012-012-007-AD

Background and reason(s) for the rulemaking:
Rulemaking is necessary to implement House Bill (HB) 451, which amends Texas Water Code, Chapter 26, by adding §26.053. HB 451, 82nd Legislature, was authored by Representative Lucio III and joint-authored by Representatives Creighton, Branch, and Bohac. HB 451 was sponsored by Senator Hegar. The bill took effect September 1, 2011.

HB 451 requires the TCEQ to create a program to prevent illegal dumping that affects surface waters of Texas. The bill requires TCEQ to work with the Texas Department of Transportation (TxDOT) to place signs on major highway water crossings that notify drivers of a toll-free number to call to report illegal dumping.

HB 451 requires rulemaking, although no deadline is provided. Rulemaking is estimated to be completed by December 2012.

Scope of the rulemaking:

A.) Summary of what the rulemaking will do:
Rulemaking consists of a Memorandum of Understanding (MOU) between TCEQ and TxDOT. The MOU outlines the responsibilities of both agencies in implementing this Program.

To implement HB 451, TCEQ will be required to: 1) establish a toll-free telephone number that forwards calls to the appropriate law enforcement agency; 2) coordinate participation with local governments; and 3) coordinate with TxDOT in the placement of signs.

TxDOT will be required to post signs compliant with the Program at locations identified and prioritized by the TCEQ and when previously posted signs identifying a major highway crossing or prohibiting illegal dumping are scheduled to be replaced.

B.) Scope required by federal regulations or state statutes:
HB 451 specifically requires rulemaking.
C.) Additional staff recommendations that are not required by federal rule or state statute:
Although not specifically required by the legislation, it will be necessary for TCEQ to conduct public outreach to educate Texans about the existence of the Program.

Statutory authority:
Texas Water Code, §§5.103, 5.104(b), 26.011, 26.053
Texas Health and Safety Code, §§361.011, 361.017, 361.024

Effect on the:

A) Regulated community:
Local governments who participate in the Program may realize some fiscal implications if they need to develop infrastructure for handling enforcement of illegal dumping. It is anticipated that local governments that could incur significant costs may opt to not participate in the Program.

B) Public:
There could be a positive effect on citizens who live in an area that participates in the Program since they will have another mechanism to report illegal dumping. There is no expected fiscal impact to consumers.

C) Agency programs:
Several agency programs may be affected by the rule.

Small Business and Environmental Assistance (SBEA) staff will establish and maintain the toll-free telephone number. Staff will also manage any required agreements with participating local governments.

It will be necessary to coordinate with Information Resources staff to set up the toll-free number.

The rule will not create a group of affected persons who are not already affected by statute.

Stakeholder meetings:
SBEA held one open stakeholder meeting in Austin on November 8, 2011. Invited stakeholders included councils of government, cities, municipalities, law enforcement agencies, environmental groups, river authorities, and the general public.

In general, stakeholders expressed support for the Don’t Mess with Texas Water Program. Stakeholders discussed the following issues:
Commissioners
Page 3
November 16, 2012

Re: Docket No. 2012-0004-RUL

- Working with local entities and existing programs to help the public report illegal dumping. The new Program should work with and learn from existing programs.
- Using TxDOT's existing "Don't Mess with Texas" campaign to help build the Program. Many stakeholders indicated that this will help create a brand for the new Program.
- Handling and enforcement of illegal dumping complaints. Stakeholders expressed the necessity for participating local governments to be able to properly respond to reports of illegal dumping.
- Using the toll-free number hotline. Stakeholders indicated that the phone number needs to be easy for the public to use.
- Providing public outreach and education. Many stakeholders stated that a necessary part of the Program will be educating the public about the existence of the hotline and the importance of stopping illegal dumping.
- Posting road signs compliant with Program requirements. Some stakeholders suggested that signs should be posted in areas that will provide the most visibility.

**Public comment:**
The commission held a public hearing on August 30, 2012, at 2:00 p.m. Commission staff members were available before and after the hearing to address specific questions from those who attended the hearing. The comment period closed on September 10, 2012. The commission did not receive any comments on the proposed rule.

**Significant changes from proposal:**
No changes were made to the rule from proposal.

**Potential controversial concerns and legislative interest:**
There are no known controversial issues. Representative Lucio III filed an identical bill during the 81st Legislative Session, which passed the House but was never voted on by the Senate. Representative Lucio III has expressed the importance of this Program working with other illegal dumping programs and the Don’t Mess with Texas campaign.

**Does this rulemaking affect any current policies or require development of new policies?**
This rulemaking does not affect current policy or require the development of new policy.

**What are the consequences if this rulemaking does not go forward? Are there alternatives to rulemaking?**
HB 451 specifically requires rulemaking to implement this Program.

**Key points in the adoption rulemaking schedule:**
- **Texas Register proposal publication date:** August 10, 2012
- **Anticipated Texas Register publication date:** December 21, 2012
- **Anticipated effective date:** December 27, 2012
- **Six-month Texas Register filing deadline:** February 10, 2013

TXDOT TRAINING CLASSES
Special Provision to Item 506
Temporary Erosion, Sedimentation, and Environmental Controls

Item 506, “Temporary Erosion, Sedimentation, and Environmental Controls,” of the Standard Specifications is amended with respect to the clauses cited below. No other clauses or requirements of this Item are waived or changed.

Article 506.1., “Description.” The second paragraph is voided and replaced by the following.

Contractor is considered primary operator to have day-to-day operational control as defined in TPDES GP TXR150000.

1.1. For projects with soil disturbance of less than 1 acre, no submittal to TCEQ will be required but Contractor will follow SWP3. For projects with soil disturbance of 1 acre to less than 5 acres, a small site notice will be posted at the site. For projects with soil disturbance of 5 acres or more a notice of intent (NOI) is required and a large site notice posted at site. Postings will be in accordance with TPDES GP TXR150000. Postings not associated with project specific locations will be in same location as Department's postings.

1.2. Notice of Intent (NOI). Submit a NOI, if applicable, with the TCEQ under the TPDES GP TXR150000 at least 7 days prior to commencement of construction activities at the project site. Provide a signed copy to the Engineer and any other MS4 operators at the time of submittal. The Department will submit their NOI prior to contractor submission and will provide a copy for Contractor's use in completing the Contractor's NOI form.

1.3. Notice of Change (NOC). Upon concurrence of the Engineer, submit a NOC, if applicable, to the TCEQ within 14 days of discovery of a change or revision to the NOI as required by the TPDES GP TXR150000. Provide a signed copy of the NOC to the Engineer and any other MS4 operators at the time of submittal.

1.4. Notice of Termination (NOT). Upon concurrence of the Engineer, submit a NOT, if applicable, to the TCEQ within 30 days of the Engineer's approval that 70% native background vegetative cover is met or equivalent permanent stabilization have been employed in accordance with the TPDES GP TXR 150000. Provide a signed copy of the NOT to the Engineer and any other MS4 operators at the time of submittal.

Section 506.3.3., “Training.” is supplemented by the following:

Training is provided by the Department at no cost to the Contractor and is valid for 3 yr. from the date of completion. The Engineer may require the following training at a frequency less than 3 yr. based on environmental needs:

- "Environmental Management System: Awareness Training for the Contractor" (English and Spanish) (Approximate running time 20 min.), and
- "Storm Water: Environmental Requirements During Construction" (English and Spanish) (Approximate running time 20 min.)

The CRPE, alternate CRPE designated for emergencies, Contractor's superintendent, Contractor, and subcontractor lead personnel involved in soil disturbing or SWP3 activities must enroll in and complete the training listed below and provide the certificate of completion to the Engineer before performing soil disturbing or SWP3 activities on the project. Coordinate enrollment as prescribed by the Department and pay associated fees for the following training:

- "Revegetation During Construction"
- "Construction General Permit Compliance," and
“Construction State Gate Checklist (CSGC).”

Training and associated fee will not be measure or paid for directly but are subsidiary to this item.

<td>MNT 812</td>
<td>Winter weather operations are critical for the efficient movement of people and goods across the State of Texas. It is important that each District and its maintenance sections provide an acceptable level of service during snow and ice events that permit traffic movement to take place under varying weather conditions. This level of service is dependent on organizing State equipment and forces, maintaining lines of communication both within the department and with outside agencies, keeping the public informed of road conditions, making TxDOT staff and other agencies aware of the changing weather conditions and its effect on the roads. This course will assist and help personnel make those sound, reasonable decisions that provide for the safest operation possible of the highway system during inclement weather.</td>
</tr>
</tbody>
</table>
ATTACHMENT D

ALLOWABLE NON-STORMWATER DISCHARGES

1. Water line flushing (excluding discharges of hyper chlorinated water, unless the water is first dechlorinated and discharges are not expected to adversely affect aquatic life);
2. Runoff or return flow from landscape irrigation, lawn irrigation, and other irrigation utilizing potable water, groundwater, or surface water sources;
3. Discharges from potable water sources that do not violate Texas Surface Water Quality Standards;
4. Diverted stream flows;
5. Rising ground waters and springs;
6. Uncontaminated ground water infiltration;
7. Uncontaminated pumped ground water;
8. Foundation and footing drains;
9. Air conditioning condensation;
10. Water from crawl space pumps;
11. Individual residential vehicle washing;
12. Flows from wetlands and riparian habitats;
13. Dechlorinated swimming pool discharges that do not violate Texas Surface Water Quality Standards;
14. Street wash water excluding street sweeper waste water;
15. Discharges or flows from emergency fire fighting activities (fire fighting activities do not include washing of trucks, runoff water from training activities, test water from fire suppression systems, and similar activities);
16. Other allowable non-stormwater discharges listed in 40 CFR §122.26(d)(2)(iv)(B)(1);
17. Non-stormwater discharges that are specifically listed in the TPDES Multi Sector General Permit (MSGP) TXR050000 or the TPDES Construction General Permit (CGP) TXR150000;
18. Discharges that are authorized by a TPDES or NPDES permit or that are not required to be permitted; and,
19. Other similar occasional incidental non-stormwater discharges such as spray park water, unless the TCEQ develops permits or regulations addressing these discharges.
ATTACHMENT E

ENV ITEM 303
MS4 Outfall Identification, Verification, Follow-up and Illicit Discharge Detection & Elimination (IDDE) Program

303.1 Description: A process to be utilized for identification, verification, recording, screening, classification, and tracking of TxDOT's Municipal Separate Storm Sewer System (MS4) outfalls located within the urbanized area of the right-of-way (ROW) for compatibility with TxDOT's Advanced Outfall Tracking System (AOTS).

303.2 Procedures for Outfall Identification, Verification, Follow-up and Illicit Discharge Detection & Elimination (IDDE) Program: Unless otherwise specified in the work authorization, a field team composed of an MS4 Environmental Technician and a GIS Technician shall perform field data collection. The Technical Expert shall perform the outfall mapping using the following steps:

- Perform research to determine numbers of potential new outfalls, unless the information has been provided to the Technical Expert by TxDOT.
- Perform research to determine outfalls that require verification or follow-up, unless the information has been provided to the Technical Expert by TxDOT.
- Generate a map, either hard copy or electronic file, to be utilized during field activities that includes TxDOT's MS4 regulated area boundaries; name and location of roadways subject to the MS4 permit requirements; name and location of the surface waters that intersect the roadways; name and location of surface water bodies to which the regulated MS4 discharges, name and boundary of the watersheds in which the regulated MS4 is located; and location of potential new outfalls.
- Perform a pre-field activity meeting among the field team and with the District POC or ENV PM to ensure communication of project goals and the required deliverables.
- Utilize a State-approved mobile Android or iOS device to identify, screen, classify, and record required data in accordance with the requirements stipulated in the Contract, and in the ENV Item 340 (relating to Do Forms Data Collection and Processing Procedures for Municipal Separate Storm Sewer System (MS4) Outfall Mapping ). The Technical Expert shall perform the outfall mapping when there is no runoff from the last rain event.
- Map and record all of the external major and minor outfalls within the MS4 regulated areas. Mapping of the internal outfalls must be authorized by the ENV PM. Third-party outfalls shall be mapped only if the Technical Expert confirms a suspected or obvious illicit discharge or the outfall meets the TCEQ definition of major outfall.
- Perform quality assurance/quality control (QA/QC) of collected data. Correct, adjust and revise the spatial data as well as the detailed and specific information required in the ENV QA/QC Sheet provided in the DoForms Manual.
303.3 Procedures for Illicit Discharge Detection & Elimination (IDDE) Program.
The Technical Expert shall perform the IDDE program using the following steps:

- Perform the illicit discharge detection of the outfalls only if a dry weather qualifying event occurs during the outfall mapping event or during the IDDE event, unless authorized by the TxDOT Project Manager.
- Use TxDOT’s Outfall Field Inspection Work Flow Diagram and Classification Scheme and Associated Tables for the Flow Diagram (Table 1, 2, and 3), provided in the DoForms Manual to screen for an illicit discharge. Outfall classifications must be recorded in the TxDOT-approved unit.
- Perform Field Screening using the Work Flow Diagram and the Technical Expert’s expertise to identify if an outfall shall be classified as Unlikely Illicit Discharge, Potential Illicit Discharge, or Obvious Illicit Discharge.
- Classify an outfall as Unlikely Illicit Discharge using physical parameters listed in the Associated Table 1 and other appropriate field observation.
- Classify an outfall as Potential Illicit Discharge using physical parameters observation or in conjunction with the field water chemistry described in the Associated Table 2.
- Using an appropriate consumable test kit for field water chemistry (e.g., Lamotte or other prior-approved field test kit) to screen for the following potential pollutants and/or characteristics: Ammonia-Nitrogen, Total Chlorine, Detergent, pH, Total Copper, and Phenols
- Results of the physical parameters and field water chemistry analyses must be recorded in the State approved unit.
- Classify an outfall as Obvious Illicit Discharge by physical observations and by collecting field water chemistry data according to the Associated Table 3.
- Verify if an outfall should be classified as Obvious Illicit Discharge by collecting a water sample and submitting the sample to a National Environmental Laboratory Accreditation Conference (NELAC)-accredited laboratory for the appropriate chemical analyses in accordance with the Associated Table 3. Results of the lab water chemistry analyses shall be recorded in the State provided spreadsheet. Any pertinent details regarding the possible origin(s) of the discharge shall be documented in the state provided spreadsheet and in a Field Logbook. The Field Logbook is only required for field sampling and laboratory data collection.

303.4 Procedures for Report an Obvious Illicit Discharge:
Notify the District POC and ENV PM of the Obvious Illicit Discharge using electronic mail, after an obvious illicit discharge is observed and confirmed with laboratory water chemistry analysis, within one (1) day of confirmation of the laboratory results or by 9:00 a.m. of the first business day following the confirmation of the laboratory results. A Letter Report including all laboratory results, suitable for submission to EPA, the Texas Commission on Environmental Quality (TCEQ), or the receiving MS4, shall also be submitted via email to
both the District POC and the ENV PM within 48 hours of completion of the laboratory analysis.

**303.5 Data Submittal:**

All collected outfall field data, when complete, must be transferred to a TxDOT FTP site that will be specified by the State. The Technical Expert shall submit the data in accordance with the requirements stipulated in the Contract, and in the ENV Item 340 (relating to DoForms Data Collection and Processing Procedures for Municipal Separate Storm Sewer System (MS4) Outfall Mapping) and must coordinate with the State to modify or correct the data until successful upload of the data into AOTS has been achieved.
ATTACHMENT F

ENV ITEM 340
DoForms Data Collection and Processing Procedures for Municipal Separate Storm Sewer System (MS4) Outfall Mapping

340.1 DESCRIPTION: DoForms is an interface that allows for real time sharing of field collected data. Field crews collect data, sync information to the “cloud,” and a desktop user downloads the information for subsequent quality assurance/quality control (QA/QC) review for later submission to TxDOT.

DoForms shall be used to map, conduct dry-weather screening, and classify outfalls within TxDOT MS4 regulated areas. Consideration shall be given to a combination of visual observations, physical observations, and field-measured water chemistry results in order to classify each outfall as following:

- Unlikely Illicit Discharge
- Potential Illicit Discharge
- Obvious Illicit Discharge

340.2 EQUIPMENT AND REFERENCES: The Technical Expert shall use a mobile Android or iOS device that has both a data connection and a true GPS receiver. The DoForms application must be installed in the State-approved Android or iOS device prior to field activities and must be used to collect and process the field data.

340.3 PROCEDURES: The Technical Expert shall use the State-approved device and the DoForms application to collect data, classify outfalls, and submit the processed data to the State using a State-provided file-transfer protocol (FTP) site (TxDOT Drop Box). The Technical Expert shall create a DoForms account to manage the data collected. The TxDOT GIS Coordinator must be included as a user (READ-ONLY) of the Technical Expert’s DoForms account. Details associated with procedures for the data collection effort are presented below.

340.3.1 Setup a DoForms Account and Import a DoForms Application

The Technical Expert shall setup the DoForms website account and then setup the mobile application based on the website information (Refer to user guides for further clarification). The Technical Expert must utilize the State-provided DoForms manual together with this ENV ITEM. The Technical Expert shall review the following documents and websites:

The Technical Expert shall download and install the DoForms Application from the AppStore (iOS) or the Play Store (Android) to the State-approved devices as well as import the TxDOT AOTS DoForms, into their account without modification.

May 2017 – Revised February 2018
The following diagram presents the general process.

**OVERVIEW OF WORKFLOW**

![Diagram of workflow]

**340.3.2 Field Activity and Field Documentation**

Prior to mobilizing a field crew to the site to conduct outfall mapping/screening, the Technical Expert shall perform the following:

- Verify that TxDOT AOTS DoForms application is loaded into the device;
- Verify that the MS4 regulated boundaries are loaded into the device or marked on survey maps;
- Verify that surface waters to be mapped, which include NHD files (i.e., water bodies) and relevant NWI files (i.e., playa), are loaded into the device or marked on survey maps;
- Verify that TxDOT ROW center lines for the assigned District are loaded into the device or marked on survey maps;
- Verify that the device has the required data and is functioning normally;
- Verify with TxDOT Project Manager the outfall numbering for the first outfall;
- Verify with the District point of contact (POC) or TxDOT Project Manager the locations of the relevant ROWs and associated outfalls to be surveyed; and,
- If requested, develop and submit an electronic map that shows the assigned roadways with the ROW and potential new outfalls.
The Technical Expert shall perform, at a minimum, the following for field documentation:

- Become familiar with the DoForms application and TxDOT’s data dictionary (e.g., features and attributes) and the purpose of each entry or field.

- Complete each field shown in the DoForms application. Note: Fields with a red asterisk are required to be completed. Some fields have default values populated, which may need to be revised as necessary by following the hints provided in the form.

- Label or name the outfall using the following naming convention:
  Three-letter TxDOT District abbreviation_County abbreviation, the last number of the previous outfall, plus one (e.g., an outfall in the TxDOT Dallas District, in Denton County, for which the previous outfall mapped was assigned the number 00398, the next outfall name in sequence would be DAL_DN_00399). If in doubt, contact TxDOT Project Manager prior to field activity.

  Note: The numerical portion of the outfall nomenclature must be consecutive for a District regardless whether crossing county boundaries (e.g., there should not be both DAL_DN_00399 and DAL_CO_00399 recorded).

- Record all relevant outfalls and associated characteristics, including both physical and field chemical observations, in the State-approved device. All non-specific entries in the device (e.g., “other,” “unknown,” etc.) shall be explained in the comment field.

- Take two (2) photographs with the State-approved device when prompted in the DoForms application. The first photograph shall be an “upstream” view (Photo 1) capturing the outfall with the above watershed, if possible. The second photograph (Photo 2) shall capture the outfall point and the “downstream” receiving water or discharge route. If the outfall has an obvious illicit discharge, at least one photograph shall illustrate the factor(s) that caused the Technical Expert to suspect an illicit discharge. For both photographs, the outfall name should be written on a dry erase board in each photograph. Perform quality assurance/quality control (QA/QC) procedures for each photograph and retake the photograph, if necessary.

- Record all field analytical results in the State-approved device using the instructions provided in the DoForms or the Data Dictionary QC document.
340.3.3 Post-Processing the Collected Data

The Technical Expert shall perform the following tasks to post process all of the field-collected data prior to submittal to TxDOT via a State-provided FTP site:

- Field data from the approved device is submitted to the Technical Expert’s DoForms account.
- When back in the office, the Technical Expert will download inspection records from the DoForms account for QA/QC daily.
- Notify the TxDOT GIS Coordinator at the end of the first inspection day for preliminary QA/QC of the first set of collected data.
- Data will be downloaded in a tabular format (.xls) and before creating a shapefile, the order of the fields will be arranged to match the order defined in the data dictionary QC document, which can be found as Attachment A in the manual. Note: Do not change/revise the attribute abbreviation name. Do not include any fields that are not listed in the data dictionary document.
- Once the inspection data schema is verified, visualize and verify data using GIS software (see Section 340.3.4 below or page 18 of the manual).
- With the data now in ArcGIS execute the AOTS_DoForms script to download photographs for each record (see Section 340.3.4 below or page 18 of the manual).
- Two additional fields must be added during post processing: i) a field for “County” [Name: County, Type: String, Length: Default]; and ii) a field for “City Name” [Name: City, Type: String, Length: 100], and populate with the correct data.
- The metadata file must be completely filled out.
- The State-provided data dictionary QC document (see Manual Attachment A) must be used to verify the accuracy of the data collected in addition to the Technical Expert’s QA/QC procedures.
- All errors and/or discrepancies must be corrected before submittal to the State.
- After completing 100% QA/QC of the data, package shapefile of outfall inspections, associated photographs and original export from DoForms (original .xls) for delivery to TxDOT via method described in Section 340.3.5.

340.3.4 DoForms Shapefile Creation and Photograph Downloader Instructions

STEP 1: Unzip the tool

Unzip the Shapefile Creation and Photograph Downloader tool to an easy-to-find location such as C:\ or whatever path makes sense within your organization’s network.

STEP 2: Create a shapefile

- Open a new ArcMap document and ensure that the dataframe is set to a geographic coordinate system (WGS 84).
- Add your project data downloaded from DoForms as an .xls formatted file.
• Right click on the table you just added and choose “display XY data”.

• You should now have a point layer stored in memory in your MXD document.

• Right click on this layer and choose Data -> Export Data in order to record data in memory layer to disk.

• Export as a shapefile to {path_where_you_unzipped_the_script_tool}\AOTS_DoForms\Deliverable\Shapefile\.

• In ArcMap open the Catalog window and navigate to the location where you unzipped the tool. Expand the “DoForms Toolbox” and double-click on the “DoForms Model”

• Select the shapefile that you just created and hit ok to run the tool.

• When the tool is finished you should see similar messages to this screen shot:

• Zip the “Deliverable” folder and send it to TxDOT via the FTP link TxDOT will provide you for data delivery following 340.3.5.
**340.3.5 Transfer of Post-processed Data to the TxDOT FTP Site**

The Technical Expert shall transfer post-processed outfall data and the associated photographs to the TxDOT FTP site. The Technical Expert shall also send notification of the data transfer to the TxDOT ENV Project Manager via email. The Technical Expert shall transfer the following:

a. The “Deliverable” folder found in the AOTS_DoForms folder. This folder includes two subfolders: “Images” and “Shapefile”.

b. In addition to the post-processed data, include the original downloaded excel file from DoForms.

c. Compress the “Deliverable” folder to a zip-file and name the zip-file “**District Abbreviation_Outfall_Date of submittal (YY-MM-DD)**” Ex: AUS_Outfall_14_06_06

d. Include the original excel file that was downloaded from DoForms in this zip-file.

Data package will be transferred to TxDOT via the State-provided file-transfer protocol (FTP) site (TxDOT Drop Box)

Utility Installation Request

To the Texas Transportation Commission
c/o District Engineer Texas Department of Transportation, Texas

Date __________

Form 1382
(Rev. 12/08)
Page 1 of 1

PERMIT NUMBER

GLOBAL POSITIONING SYSTEM COORDINATES (GPS)
NORTH AMERICAN DATUM 1983 (1993 ADJUSTMENT)
IN DECIMAL DEGREES (DD)

BEGIN
LATITUDE (DD)  LONGITUDE (DD)

END

We will construct and maintain the line on the highway right of way as shown on the attached drawing and in accordance with the rules, regulations and policies of the Texas Department of Transportation (TxDOT), and all governing laws, including, but not limited to, the “Texas Engineering Practice Act,” “Federal Clean Water Act,” the “National Endangered Species Act,” “Americans with Disabilities Act,” and the “Federal Historic Preservation Act.” Upon request by TxDOT at any time, we will submit to TxDOT proof of compliance with all governing laws, rules and regulations before commencement of construction. Plans shall include the design, proposed location, vertical elevations, and horizontal alignments of the facility based on the department’s survey datum, the relationship to existing highway facilities and the right of way line, traffic safety and access procedures, and location of existing utilities that may be affected by the proposed utility facility. The location and description of the proposed line and appurtenances is more fully shown by a complete set of drawings attached to this Utility Installation Request (Request). We will give plans to TxDOT for each future proposed modification or expansion to our facility and TxDOT will have 30 days to review and approve the plans prior to commencement of the work. A new Request may be required as a condition of approval.

Our organization will use Best Management Practices to minimize erosion and sedimentation resulting from the proposed installation, and we will revegetate the project area as indicated under “Revegetation Special Provisions.” We will also ensure that traffic control measures complying with applicable portions of the Texas Manual of Uniform Traffic Control Devices will be installed and maintained for the duration of this installation.

When installing, modifying or maintaining our utility on controlled access facilities, we shall conform to the Texas Transportation Code, Title 6 Roadways, Chapter 203, Subchapter C, Control of Access, §203.031 (http://www.statutes.legis.state.tx.us/). We shall limit access for servicing this installation to access via (a) frontage roads where provided, (b) nearby or adjacent public roads or streets, (c) trails along or near the highway right of way lines, connecting only to an intersecting road, from any one or all of which entry may be made to the outer portion of the highway right of way for normal service and maintenance operations. Our rights of access to the through traffic roadways and ramps shall be subject to the same rules and regulations that apply to the general public.

It is expressly understood that TxDOT does not purport hereby to grant any right, claim, title or easement in or upon highway right of way. TxDOT may require us to relocate this line, subject to the provisions of governing laws, by giving us at least 30 days written notice. We understand a new Request will be required for the relocation. We will notify TxDOT prior to commencement of any operation which requires pruning of trees so that TxDOT may provide specifications to govern performance of work, including trimming, topping, tree balance, type of cuts, painting cuts and clean up. We understand that these specifications are intended to preserve TxDOT’s considerable investment in highway beautification plantings and by reducing damage due to trimming and to protect known endangered species.

Our installation shall not damage any part of the roadway structure or associated appurtenances. We will make adequate provisions to cause minimum inconveniences to the traveling public and adjacent property owners. We will not open-cut driveways or intersecting roadways without specific written permission from the owner.

Following approval, we will begin construction on or after ________________________

Month/Day/Year

May 2017 – Revised February 2018
We understand TxDOT may place additional provisions and requirements as listed below, based upon, but not limited to, the type of utility being installed, local site conditions, soil types and traffic.

### Additional Provisions and Requirements (for TxDOT input only)

- **General Special Provisions:**
  - Are attached.
  - Are not attached.

- **As-built Plans/Certifications of Construction:**
  - Are required and shall be certified as accurate by an authorized representative of the company.
  - Are required and shall be signed and sealed by a State of Texas Licensed Professional Engineer.
  - Are not required
  - Certification that utility was installed as approved

- **Re-vegetation Special Provisions:** In order to minimize erosion and sedimentation resulting from the proposed installation, the project area will be re-vegetated:
  - in accordance with TxDOT’s Standard Specification Item 164 which specifies the appropriate grass seed mix to be used, or;
  - as indicated on the attachment.

TxDOT Representative to be notified 48 hours prior to beginning construction.

If approved, we understand we will assume all risks associated with this installation within the TxDOT right of way. These risks include injuries to our workers, damage to contiguous utility lines that may be in the area and injuries or damage resulting from our failure to properly install and maintain the line.

If the character, use or function of our installation is materially changed from that approved under this Request, we will notify TxDOT within 30 days after the change. In the event of a voluntary or involuntary loss of public utility status, or other legal authority for longitudinal placement of the utility facility in the highway, or there is an abandonment of the facility without the approval of TxDOT, we will at our expense remove the unauthorized portion of the facility from the right of way.

If installation of the line is not begun prior to the 91st calendar day from date of issuance, we acknowledge that, unless otherwise extended, TxDOT’s approval of this Request will automatically expire, and we will be required to resubmit our Request. All Request submissions, whether due to expiration of approval under this paragraph or new Requests for modifications and relocations shall be in accordance with the governing laws, rules, regulations and policies existing at the time of submission. In the event we fail to comply with any or all of the requirements as set forth in this Request, the State may take such action as it deems appropriate to compel our compliance.

By signing as/for the requestor below, I certify that I am authorized to represent the requestor, that I agree to the provisions and requirements included in this Utility Installation Request, and our commencement of construction will further attest to our review and acceptance of said additional provisions and requirements.

EMS STAGE GATE CHECKLIST
Instructions/Purpose

Construction Stage Gate Checklist (CSGC)

Purpose

The CSGC is intended to be a construction project inspection and communication tool. It should be completed with both designated TxDOT and Contractor personnel present to help facilitate communication between project personnel. The CSGC helps ensure that TxDOT and the Contractor meet their commitment to environmental compliance by providing a comprehensive overview of all environmental requirements and identifying areas where improvements, additional attention and/or actions are needed.

Suggested Usage

Each District will be responsible for determining their representative for completing the CSGC, preferably, an experienced employee such as the DEQC, Project Engineer, Project Manager or Chief Inspector. TxDOT and Contractor should present their representatives at the pre-construction meeting. It is recommended that these representatives communicate with project managers, construction inspectors and contractor personnel during the completion of the CSGC to communicate findings. It is expected that needed action(s) should occur early in the process for any issue including those which could be potentially noncompliant. Input and/or action(s) may be needed by other parties (i.e. AE, DEQC, AP&D, ENV Coordinator, etc.) to resolve issue(s).

Applicability

The CSGC should be completed on construction and maintenance contracts that have soil disturbing activities and/or environmental permit requirements. Types of projects include new location, existing pavement rehabilitations/widening, culvert work, bridge rehabilitation/ replacement. Districts should determine whether the CSGC should be completed on minimal soil disturbance type projects such as MBGF upgrade, landscaping, or ACP overlays. Typical projects not requiring the CSGC would be signal installation, crack sealing, retrace striping, seal coating, bridge joint repair.

Frequency

The initial CSGC inspection should occur within one month of beginning initial construction activities and at minimum annually, or if project is less than one year when 50% of work has been completed. Annual DEQC inspections cannot be used in place of this inspection requirement unless the TxDOT inspector and Contractor representative are present and involved during inspection. Frequency for completing additional CSGC inspections by TxDOT and Contractor CRPE will be determined at the pre-construction. Factors influencing frequency include permit requirements, duration/complexity of the project. It is recommended that completed CSGC be reviewed by another TxDOT representative for quality monitoring of the environmental process.

Documentation and Record Retention

The completed CSGC must be kept with project files and retained according to file retention requirements.

Acronyms:

MS4: Municipal Separate Storm Sewer System
DSHS: Department of State Health Service
CSN: Construction Site Notice
NOI: Notice of Intent
USACE: United States Army Corp of Engineers
BMP: Best Management Practice
PS&E: Plans Specifications and Estimate

Note for Projects let after January 1, 2016:

When required by TPDES GCP TXR1500000 - both the Contractor with Day to Day Operational Control and TxDOT with Operational Control over Plans and Specifications must post Large or Small Construction site notices. When an NOI is required, the Contractor is responsible to process the NOI.

**Texas Department of Transportation**

**Stormwater Management Program**

**Environmental Management System**

**Construction Stage Gate Checklist (CSGC)**

1. Is the stabilization documented? (i.e. Site Map, DWR’s, methods, seeding rates, sodding, hydro-mulch, etc.)
2. Are control measures performing properly and being maintained? (If NO, answer question 19)
3. Should other measures be considered to replace or added to help performance?
4. Are on-site accumulations of sediment removed as soon as practicable to prevent off-site impacts? (i.e. sediment near off-site inlets, etc.)
5. Are litter, construction debris, and construction chemicals exposed to wind or water erosion? (i.e. screening outfalls, picked up daily)
6. Is a lidded dumpster on the project to dispose of litter, construction debris, etc.?
7. Were velocity dissipation devices (i.e. rock filter dams, holding ponds, etc.) placed at discharge locations and along the length of any outfall channel to provide a non-erosive flow velocity from the structure to the water course?
8. Were the inspections performed per the contract/SWP3?
9. Are deficiencies and nonconformance issues identified on the inspections being addressed before off-site discharge occurs?
10. Are controls in place to minimize tracking of sediments by construction vehicles and equipment?
11. Has TxDOT approved PSLs on Right-of-Way?
12. Are the contractor’s on and off Right-of-Way PSLs shown and identified as contractor’s PSL on the SWP3 site map?
13. Is the contractor required to have a concrete washout area? (If yes, answer questions 30)
14. Is the concrete washout area(s) properly constructed and maintained and all shown on the SWP3 site map?
15. Is the inspection cycle option for this project “At least every 14 calendar days and within 24 hours after 0.5 inches or more of rainfall”? (If yes, answer questions 32-33) Or, ___ 7 day inspection cycle is conducted (Skip to question 34)
16. Is there a rain gauge on the project? (Not required for projects with 7 day inspection)
17. Are there records documenting rainfall amounts? (Not required for projects with 7 day inspection)
18. Did the inspection summary report include the name of the inspector, date of the inspection, measures/area inspected, and actions needed/taken? If no, circle the missing information in this question.
19. Did the inspection summary report include major observations? (i.e. locations of discharges of sediment or pollutants, BMPs that require maintenance, BMPs that failed to operate as designed or provided inadequate, BMPs are needed)
20. Did the SWP3 include the inspector qualification / certification document?

**Municipal Separate Storm Sewer System (MS4)**

21. For projects located within a Municipal Separate Storm Sewer System (MS4), have all applicable MS4 operators been notified?

**Jurisdictional Waters of the United States, including Wetlands**

22. Does the project require a USACE permit? (If yes, answer questions 39 - 44) List permit type:
23. Are wetlands and waters of the US being protected in accordance with the authorization/permit and the PS&E?
24. Are the proper USACE permits maintained and accessible (e.g. Area Office)?
25. Is clearance of off Right-of-Way PSLs required by a special condition of TxDOT’s USACE permit? (If yes, answer question 42)
26. Has clearance of these PSLs been obtained?
27. Are the BMPs for protecting wetlands and water of the US working effectively?
28. Are construction activities meeting all USACE general or special permit conditions?

**Biological Resources**

29. Is work compliant with the plans for protection of vegetation, including trees?
<table>

46. Is migratory bird nesting requirements being followed? [ ] Yes [ ] No [ ] N/A

47. Is the work compliant with the plans and/or mitigation requirements for protection of threatened or endangered species/habitats? [ ] Yes [ ] No [ ] N/A

Noise

48. If there are any proposed noise impacts is the work being performed in accordance with the noise mitigation plan? [ ] Yes [ ] No [ ] N/A

Air Quality

49. Are controls being practiced and are they effective for minimizing dust? [ ] Yes [ ] No [ ] N/A

50. Were the procedures for the Texas Emission Reduction Plan or other incentive measures met and documented? (i.e. contractor is using the highest tier level equipment and best fuel grade) [ ] Yes [ ] No [ ] N/A

51. Are measures being taken for reducing idling of equipment and vehicles? [ ] Yes [ ] No [ ] N/A

Cultural Resources

52. Are known historical and archeological properties being protected and preserved in accordance with the plans? [ ] Yes [ ] No [ ] N/A

53. If historical and archeological properties have been encountered during construction, were the historical and archeological properties protected and were TxDOT Emergency Discovery Guidelines followed? [ ] Yes [ ] No [ ] N/A

DHSJ Notification

54. Is DHSJ notification(s) required? (if yes, complete questions 55-57) [ ] Yes [ ] No

55. Has DHSJ notification(s) been electronically submitted or mailed? [ ] Yes [ ] No

56. Was the DHSJ verification number received on-line or if mailed postmarked at least 10 working days prior to initiating demolition or renovation? [ ] Yes [ ] No

57. Were there any amendments to the DHSJ notification(s)? [ ] Yes [ ] No

Hazardous Materials

58. If any hazardous materials (identified or unknown) are encountered during construction, have the proper TxDOT and agency contacts been made? [ ] Yes [ ] No [ ] N/A

59. Are hazardous materials mitigation and abatement procedures being followed? [ ] Yes [ ] No

60. Do the project plans include a soil and/or groundwater management plan? (if yes, is the abatement/mitigation plan being adhered to?) [ ] Yes [ ] No

61. Has a spill of less than reportable quantity occurred? (If yes, answer question 62) (Amount: ) [ ] Yes [ ] No

62. Has a spill of reportable quantity occurred? (If yes, answer question 63) (Amount: ) [ ] Yes [ ] No

63. Were Spill Response Plan procedures followed for reporting and cleanup? [ ] Yes [ ] No

Navigable Waters - Leave blank if this does not apply

64. Is a US Coast Guard Section 9 permit applicable? (If yes, answer questions 65 - 66) [ ] Yes [ ] No

65. Is the US Coast Guard Section 9 permit maintained and accessible (e.g. Area Office)? [ ] Yes [ ] No

66. Are construction activities meeting US Coast Guard Section 9 permit conditions? [ ] Yes [ ] No

67. Is a USACE Section 10 permit applicable? (If yes, answer questions 68 - 69) [ ] Yes [ ] No

68. Is the USACE Section 10 permit maintained and accessible (e.g. Area Office)? [ ] Yes [ ] No

69. Are construction activities meeting USACE Section 10 permit conditions? [ ] Yes [ ] No

#### International Boundary Water Commission (IBWC) - Leave blank if this does not apply

| Yes | No | 75. Is an IBWC License applicable? (If yes, complete questions 76 - 77) |
| Yes | No | 76. Is the IBWC maintained and accessible (e.g. Area Office)? |
| Yes | No | 77. Are construction activities meeting IBWC License conditions? |

#### Change Orders - Supervision/Record Keeper Assistance

| Yes | No | N/A | 78. Is the SWP3 updated for any changes in design or project change orders? |
| Yes | No | | 79. Are change orders being processed per the “Construction Contract Administration Manual” (Chapter 7, Section 1) that may have environmental impacts on this project? (If yes, answer questions 80 - 81) |
| Yes | No | | 80. Are change orders assessed for NEPA re-evaluation and/or resource agency coordination? |
| Yes | No | | 81. Has coordination with Advance Planning & Development occurred to ensure NEPA compliance? |
| Yes | No | | 82. Have the project limits or scope changed? (If yes, answer question 83) |
| Yes | No | | 83. Do the change orders require environmental mitigation, abatement, or clearance actions? |

#### Contractor

| Yes | No | 84. Has the contractor CRPE provided a complete list of employee training? |
| Yes | No | 85. Is the contractor CRPE monitoring BMPs by completing daily monitoring reports and addressing issues? |

ADVANCED PLANNING AND DEVELOPMENT (AP&D) STAGE GATE CHECKLIST

Instructions/Purpose
Advance Planning and Development (AP&D)
Stage Gate Checklist

The Advance Planning and Development (AP&D) Stage Gate Checklist is intended to be an awareness and communication tool. It should help facilitate communication between personnel developing projects during the AP&D process (including producing of schematic) and Environmental personnel, thereby addressing what is required in the Environmental Document and/or Permits as early as possible in project development.

It should also help to ensure Environmental Document and/or Permits are updated/obtained by identifying issues during project development.

It is recommended that the Project Manager, communicating with Environmental Coordinator, fill out this form at different stages of project development as described on the Checklist; however, the final decision on who fills out and signs the Checklist is left to each District. It is expected that not all questions can be answered appropriately, in the Initial Review, therefore, some questions may be left blank at that time. Questions that are left blank should be researched or communication with appropriate personnel should occur to appropriately address each issue as early in the process as possible. When Final Review is complete, all questions must be answered and appropriately addressed, unless otherwise noted by you at the end of the form, before proceeding to PS&E development.

This checklist is not intended to be a comprehensive list of all environmental issues that should be accounted for in the AP&D stage of project development. It is intended to identify some of the biggest issues or the issues that most often cause problems.

Completion of this form is required on all projects. On some simplistic projects, depending on type, only Final Review would be filled out. The completed form should be kept with project files and retained according to current file retention requirements.

Rev 3/23/11
# TxDOT Environmental Management System

## Advance Planning and Development (AP&D)

### Stage Gate Checklist

Who is to fill out form? Recommended the Project Manager communicating with Environmental personnel. District decision. Except for Final Review, all questions may not be able to be filled in and can be left blank. To complete Final Review and proceed to PS&E stage, all questions must be answered and addressed appropriately unless otherwise noted by you at end of form.

Type of Permits/approvals required: [ ] TPDES (402) [ ] 404 [ ] Section 106 [ ] Section 404 [ ] Section 6 (i) [ ]

Note: Write in any that are required.

Type of Review: [x] Initial Review [ ] Second Review (Approximately 50% of schematic process) [ ] Final Review

Note: Number of reviews will be determined by complexity of project. Final Review must be done on all projects in order to advance to PS&E development.

Description of Project: Replace Bridge and Approaches

### Schematic:

- [ ] Yes [ ] No 1. Is a Schematic required for the project?

### Environmental Documentation, Community Impacts and Environmental Justice:

- [ ] Yes [ ] No 2. Is an Environmental document required for the project?
  - Type of document: [ ] BCE, [ ] PCE, [ ] LE, [ ] EA, [ ] EIS

- [ ] Yes [ ] No [ ] NA 3. Has the FHWA given approval for further processing the NEPA document?

- [ ] Yes [ ] No 4. Is public involvement required?

- [ ] Yes [ ] No [ ] NA 5. Have public involvement requirements been satisfied for this project?

- [ ] Yes [ ] No [ ] NA 6. Have pertinent public concerns or comments been addressed in the environmental analysis? (Note: This is not referring to providing a response to comments, but to make sure that pertinent issues are acknowledged and analyzed).

- [ ] Yes [ ] No 7. Will ROW be acquired that includes the relocation of homes, businesses, community areas, etc.?

- [ ] Yes [ ] No 8a. Will project activities lead to changes in access or travel patterns for any mode?

- [ ] Yes [ ] No 8b. Has it been properly addressed?

- [ ] Yes [ ] No 9. Will project impacts be disproportionately borne by Environmental Justice Population(s)?

### Storm Water

- [ ] Yes [ ] No 10. Will the project be covered under the Construction General Permit?

- [ ] Yes [ ] No 11. Is less than one acre to be disturbed by the project?

- [ ] Yes [ ] No 12. Will one (1) acre or more be disturbed by the project?

- [ ] Yes [ ] No 13. Will five (5) acres or more be disturbed by the project?

- [ ] Yes [ ] No 14. Is the project within a regulated/Zone 1 or 21 (Home Rule) MS4 area?

### Water Resources

- [ ] Yes [ ] No 15. Will an Edwards Aquifer Abatement Plan be required?
  - Type of Edwards Aquifer Plan: [ ] Water Pollution Abatement Plan [ ] Contributing Zone Plan

- [ ] Yes [ ] No 16. Will a Groundwater Conservation District be potentially impacted by the project?

- [ ] Yes [ ] No 17. Will filling, dredging, or excavating in any water body, river, creek, stream, wetland, or wet area be conducted?

- [ ] Yes [ ] No [ ] NA 18. Will 401 Water Quality Certification be addressed?

- [ ] Yes [ ] No 19a. Will a 404 permit be required?

- [ ] Yes [ ] No 19b. Type of Section 404 Permit: [ ] 3% [ ] 3% [ ] 3% [ ] 3% [ ] 3% [ ] 3% [ ] 3% [ ]

- [ ] Yes [ ] No 20. Is construction to be performed within the 100-year flood zone?

- [ ] Yes [ ] No 21. Will a USACE Section 10 permit be required?
### Cultural Resources:

- [ ] Yes [ ] No 22. Will a US Coast Guard Section 9 permit be required?
- [ ] Yes [ ] No 23. Will an archaeological site located within existing or proposed ROW be impacted?
- [ ] Yes [ ] No 24. Will an archaeological impact assessment be required?
- [ ] Yes [ ] No 25. Will a historic structure or district be impacted by the project?
- [ ] Yes [ ] No 26. Will the project impact a Depression-era Roadside resource such as a culvert, etc. with masonry features?
- [ ] Yes [ ] No 27. Will publicly owned parks and recreational areas be potentially impacted by the project?
- [ ] Yes [ ] No 28. Are historical markers present in or adjacent to the project area?
- [ ] Yes [ ] No 29. Is a cemetery present in or adjacent to the project area?
- [ ] Yes [ ] No 30. Is an irrigation canal or other feature present in or adjacent to the project area?

### Biological Resources:

- [ ] Yes [ ] No 31. Will trees be removed during the project construction?
- [ ] Yes [ ] No 32. Will construction activities impact protected/endangered species or their habitat?
- [ ] Yes [ ] No 33. Could migratory birds be affected by the project including habitat? (e.g., will nests/trees/bridges be removed during the nesting season?)
- [ ] Yes [ ] No 34. Will the project impact a protected/endangered species?
- [ ] Yes [ ] No 35. Will the project impact wildlife refuges or other managed lands?
- [ ] Yes [ ] No 36. Will farmland be impacted?
- [ ] Yes [ ] No 37. Will mitigation be required for Biological Resources?

### Air & Noise:

- [ ] Yes [ ] No 38. Is the project included in and consistent with the applicable transportation plan?
- [ ] Yes [ ] No 39. Is the project included in and consistent with the MTP and TIP?
- [ ] Yes [ ] No 40. Is the project included in and consistent with the applicable STIP?
- [ ] Yes [ ] No 41. Is a Traffic Air Quality Analysis (TAQA) (qualitative) required?
- [ ] Yes [ ] No 42. Is a Traffic Air Quality Analysis (TAQA) (quantitative) required?
- [ ] Yes [ ] No 43. Is a Mobil Source Air Toxics (MSAT) analysis required?
- [ ] Yes [ ] No 44. Is a noise analysis required?
- [ ] Yes [ ] No 45. Will construction noise mitigation be required?
- [ ] Yes [ ] No 46. Will operating noise mitigation be required?
- [ ] Yes [ ] No 47. Will air quality control measures be required during construction?

### Hazardous Materials:

- [ ] Yes [ ] No 48a. Are hazardous materials potentially present in the project ROW?
- [ ] Yes [ ] No 48b. Hazardous materials: Media(s): [ ] soil [ ] groundwater [ ] vapor [ ] particulate air Substance(s): [ ] gasoline [ ] lead-based paint [ ] SRF [ ] asbestos [ ] oil and gas waste [ ] creosote
- [ ] Yes [ ] No 50. Will a bridge structure be demolished in the project?
- [ ] Yes [ ] No 51. Will construction activities require abatement of asbestos at the project site?
- [ ] Yes [ ] No 52. Will construction activities require abatement of lead-based paint at the project site?

### Ensuring Environmental Document Compliance:

- [ ] Yes [ ] No 53a. Has anything been identified during AP&D process that would require Environmental Document to be updated?
- [ ] Yes [ ] No [ ] N/A 53b. If yes, has Environmental Document been updated appropriately?

### Final Schematic:

- [ ] Yes [ ] No [ ] N/A 54. Have all environmental requirements/commitments, etc. been addressed in Schematic?
List all environmental commitments identified to date:

List any issues that have not been completed in AP&D that will be completed by AP&D concurrently with PS&E development but must be completed prior to letting:

PLANS, SPECIFICATIONS AND ESTIMATES (PS&E) STAGE GATE CHECKLIST

Instructions/Purpose

Plans, Specifications and Estimates (PS&E) Stage Gate Checklist

The Plans, Specifications and Estimates (PS&E) Stage Gate Checklist is intended to be an awareness and communication tool. It should help facilitate communication between personnel developing projects during the PS&E process with AP&D and Environmental personnel, thereby addressing what is required in the Environmental Document and/or Permits as early as possible in the design process. It should also help to ensure Environmental Document and/or Permits are updated/obtained by identifying issues during project development and then proper direction be given to the contractor in the PS&E package to ensure environmental requirements/commitments are met. It is recommended that the Project Manager communicate with AP&D and Environmental personnel to fill out this form at different stages of project development as described on the Checklist; however, the final decision on who fills out and signs the checklist is left to each District. It is expected that not all questions can be answered appropriately, especially in the Initial Review; therefore, some questions may be left blank at that time. Questions that are left blank should be researched or communication with appropriate personnel should occur to appropriately address each issue as early in the process as possible. When Final Review is complete; all questions must be answered and appropriately addressed, unless otherwise noted by you at the end of the form, before proceeding to letting.

This checklist is not intended to be a comprehensive list of all environmental issues that should be accounted for in the PS&E stage of project development. It is intended to identify some of the biggest issues or the issues that most often cause problems.

Completion of this form is required on all projects. On some simplistic projects, depending on type, only Final Review would be filled out. The completed form should be kept with project files and retained according to file retention requirements.

AGENDA FOR PRE-CONSTRUCTION CONFERENCE

Date: ____________

Project: ____________________________
Control: ____________________________
Highway: ____________________________
County: ____________________________
Contractor: ____________________________

I. Opening Discussions
   A. Welcome and introductions.
   B. Purpose of meeting: This meeting is held in accordance with departmental policy in order for personnel of the TxDOT, Contractor, Utility Companies, Law Enforcement Agencies, etc., to discuss the schedule and methods of operation. To acquaint all concerned with the lines of authority and communication, and determine the responsibilities and duties of contractor and department personnel.
   C. TxDOT Ethics Policy

II. Review of Project - Area Engineer
   A. Location of project ____________________________
   B. Nature of project ____________________________
   C. Workweek Type _______ and Number of days allowed ____________________________
   D. Length and limits ____________________________
   E. Contractor and Contract Amount ____________________________
   F. Utility reports and discussion ____________________________
   G. Third Parties involved ____________________________

III. Construction Plans - Contractor
   A. Estimated date of start ____________ and completion ____________
   B. Contractor’s Monthly Progress Schedule (Furnished to the Area Engineer per Item 8.2)
   C. DSHS Demolition / Renovation Form requirements – bridge projects only
   D. Contractor’s sources of materials (Form CIS.36)
   E. Storage site(s) of materials and equipment ____________________________
   F. Railroad Insurance requirements ____________________________
   G. Shop Drawing submittals (email to WFS_BRG-ShopPlanReview@txdot.gov)

IV. Environmental Issues
   A. Compliance with project PS&E, Environmental Permits, Issues and Commitments (EPIC) Sheet, including (when applicable):
      • Clean Water Act, Section 402, Texas Discharge Elimination System (TPDES)
      • Clean Water Act, Section 401 and 404 Compliance
      • Cultural Resources
      • Hazardous Materials or Contamination Issues
      • Federal listed, proposed threatened, endangered species, critical habitat, state listed species, candidate species, and Migratory Bird Treaty Act (MBTA)
      • Vegetation Resources
      • Other environmental issues

Revised: 4/24/2012
Replaced: 12/20/2010

Page 1 of 4
AGENDA FOR PRE-CONSTRUCTION CONFERENCE

B. Storm Water Pollution Prevention Plan (SWP3 2118)
C. Construction Stage Gate Checklist: Determine who is responsible for conducting inspections and defines the frequency for conducting joint inspections
D. SW3P Bulletin Board Requirements - Posting of TCEQ Notice-of-Intent and/or TCEQ Construction Site Notice
E. Designation of Contractor Responsible Person for Environmental Requirements (CRPe) and Departmental Responsible Person (DRPe):
   • CRPe Name: ___________________________ Cell: ___________________________
   • DRPe Name: ___________________________ Cell: ___________________________
   • Frequency of Inspections:
F. Discussion of Phasing to minimize soil disturbance
G. Housekeeping
H. If there will be off ROW PSL’s, communicate contractor’s responsibilities

V. Traffic Control Plan
   A. Locations, conditions and protection of barricades and lights
   B. Signs
   C. Speed zoning
   D. Contractor’s Temporary Traffic Signal Maintenance Plan (if applicable)
   E. Flagging (stress the importance of proper procedures)
   F. Contractor’s responsible person (CRP) (In letter form)
   G. TxDOT responsible person (DRP) (In letter form)
   H. Project’s TCP for handling traffic
   I. Detours
   J. Limitations on working hours

VI. Police Supervision Available
   A. Department(s) affected
   B. Determine how traffic-related information will be handled (accidents, hazards, etc.)

VII. Contract Administration
   A. Approval of subcontractors
   B. Submit complete copies of all subcontracts
   C. Bulletin Board Requirements (ensure all forms have Contact Names and Numbers)
   D. Estimate review method
   E. Material On-Hand accessibility, inventory, and request deadline
   F. Prompt Payment certification (Form 2177)
   G. Weekly payroll submissions and wage rate interviews (Federal-Aid projects only)
   H. On-the-Job Training, if applicable

VIII. DBE Issues
   A. DBE/SBE Goal _________%
   B. DBE/SBE Special Provision requirements
   C. DBE/SBE Progress reports due the 15th of the month to Area Engineer
   D. Contact the DCO regarding changes, disputes, or inability to meet the DBE/SBE commitment.
   E. Coordination for Commercially Useful Function (CUF) Review
   F. Contractor should request CUF review of Race-Neutral DBE if there appears to be any potential for DBE shortfall
   G. Discussion of procedures for DBE hauling firms, if applicable. Contact DDC for assistance.
AGENDA FOR PRE-CONSTRUCTION CONFERENCE

IX. Project Safety Procedures
A. The contractual obligation of the contractor for complying with State and Federal construction safety standards. (See Safety Review Form)
B. The Accident Prevention Program of the contractor - organization, staff, names of responsible individuals, meetings, training, reports, etc. (Attach to Safety Review Form)
C. Contractor responsibility for seeing that subcontractors comply with safety regulations.
D. The contractor’s plans for meeting specific safety requirements and for eliminating potentially critical hazards on the project. (A written record of specific safety measures discussed should be placed in the project files).

X. EEO, Training, and Labor Compliance
Equal Employment Opportunities (EEO) Compliance Program requirements are contained in the following special provisions:

- Required Contract Provisions Federal-Aid Construction Contracts (Form FHWA 1273)
- Notice of Requirement for Affirmative Action to Ensure Equal Employment Opportunity (Executive Order 11246)
  - Including Form FHWA 1391 – Certification of Nondiscrimination in Employment and Notice of Requirement for Affirmative Action to Ensure Equal Employment Opportunity (Executive Order 11246). In addition, the applicable wage determination, the DBE or SBE special provision, and the prompt payment requirement must be included in subcontract agreements. Form FHWA 1273 must be physically attached to all federally assisted contracts, subcontracts, and purchase orders of $10,000.00 or more.

On-the-Job Training:
Special Provision 000, 001, 807 – On-the-Job Training (OJT) Program, incorporated into all federal-aid highway improvement contracts, was made effective with the January 2007 state letting. The TxDOT Office of Civil Rights – Contract Compliance Section (OCR-CCS) will notify every contractor selected for participation in the program at the beginning of each calendar year and advise them of the number of trainees they are expected to support. Participating contractors must enroll, train and graduate a number of trainees sufficient to meet their assigned annual trainee goal.

Prevailing wage rate requirements:
Contractors and subcontractors must pay employees, at a minimum, the classification wage rates specified in the contract. The minimum wage rates must also be conspicuously posted and accessible on the project site.

Payroll Records:
- Payroll records certifying compliance with the contract's minimum wage rates, overtime and payroll deduction requirements must be submitted within 7 calendar days on federal-aid construction projects. On 100% state funded construction contracts, the contractor or subcontractor must keep the payroll records and make them available for review by the department.

Bulletin Board Requirements:
The U.S. Department of Labor, Federal Highway Administration, and U.S. Department of Transportation require certain posters to be posted on bulletin boards in places accessible to the employees on a job site. The bulletin board requirements only apply to federal-aid construction contracts. Ensure all forms have Contact Names and Numbers.
AGENDA FOR PRE-CONSTRUCTION CONFERENCE

EEO Meeting Requirements:
EEO meetings with supervisory and personnel office employees must be conducted before the start of work and then at least once every six months. EEO meetings with non-supervisory employees must be conducted at least annually.

XL Partnering
A. Use of partnering application
B. Identify individual for issue escalation ladder
C. Establish escalation deadlines
D. Rocks in the road (review of potential problems)

ITEMS OF DISCUSSION ON ARRA CONTRACTS

At this point and time, the below items should also be included on the State and Local Let Pre-Construction Agenda and Minutes where applicable:

ARRA Special Provisions:
- SP 000 000-1580 - Federal Government right to review and interview
- SP 000 000-1555 - Project Employment Data
- SP 000 000-1001 and 000 000-1592 (State OJT) – are NOT to be included in local administered Projects ARRA Special Provisions
- At least one of the Quarter Labor Interview recipients must be an OJT if assigned on Project, use Form 2220 Labor Standards Review.

DBE requirements:
- DBE Reporting and Forms - Initial, Monthly, Progress

FHWA requirements:
Submission of data manually (paper) vs. electronically (CD, email or through TxDOT EPRS)
- FHWA-1585 (Local Let - Project Status)
- FHWA-1586 (Project Listing - District)
- FHWA-1587 (Employment Summary)
- FHWA-1589 (Contractor and Local Entity Employment - Contractor and District) (Is required to collect employment data for direct employment created by the project.)

MOH process:
- Fraud, Waste and Abuse process (may use OIG guidance)

Bulletin Board:
- Whistle Blowing Protection Poster

Local Entity In-House only:
- Single Audit Act 133 - annual Schedule of Expenditures of Federal Awards (SEFA)
- ARRA designated separation of funding source from normal financial streaming process.

<td>SP1</td>
<td>SPCC</td>
<td>Paperwork</td>
<td>Is a SPCC plan located at the facility? Does the plan have a PE seal?</td>
<td>X</td>
<td></td>
<td></td>
<td></td>
<td>X</td>
<td>A complete review and evaluation of the SPCC Plan is required at least once every five years. 40 CFR 114(b) - Compliance of SPCC by owner.</td>
</tr>
<tr>
<td>SP2</td>
<td>SPCC</td>
<td>Paperwork</td>
<td>Is the SPCC plan less than 6 years old?</td>
<td>X</td>
<td></td>
<td></td>
<td></td>
<td>X</td>
<td>Amendments to the SPCC plan should be implemented as soon as possible, but no later than 6 months following preparation of any amendment. 40 CFR 114(b) - Amendments of SPCC by owner.</td>
</tr>
<tr>
<td>SP3</td>
<td>SPCC</td>
<td>Paperwork</td>
<td>Is the facility in compliance with the written SPCC Plan and have all amendments in the plan been implemented?</td>
<td>X</td>
<td></td>
<td></td>
<td></td>
<td>X</td>
<td>Documentation of monthly inspections for 1) tanks, valves, and controls and 2) doors should be documented on appropriate forms and retained in the back of the facility’s SPCC plan. Documentation should be included in the plan for a minimum of 3 years. 40 CFR 114(c) - General Maintenance of SPCC Plan.</td>
</tr>
<tr>
<td>SP4</td>
<td>SPCC</td>
<td>Paperwork</td>
<td>Does the facility document monthly inspections of 1) tanks, valves, and controls and 2) doors on the appropriate forms in the SPCC plan?</td>
<td>X</td>
<td></td>
<td></td>
<td></td>
<td>X</td>
<td>Cleanup from spills should be contained and disposed of in a timely manner. Absorbs and rags can be disposed of into the dumpster in small amounts, as long as there are no signs of free-floating oil. Cleanup waste from larger spills must be contained. Discharge of stormwater from secondary containment is permitted as long as there is not a visible sheen on the water. When drainage of the site is required, this should also be documented on the appropriate form. A record of spills, reporting, and cleanup activities should be included in the plan and communicated to regulatory agencies when necessary, or if needed. Return records for 3 years. 40 CFR 114(d) - General requirements SPCC.</td>
</tr>
<tr>
<td>SP5</td>
<td>SPCC</td>
<td>Paperwork</td>
<td>Is there documentation of annual training included in the SPCC plan? Is the person responsible for implementation of the plan included in the training?</td>
<td>X</td>
<td></td>
<td></td>
<td></td>
<td>X</td>
<td>At a minimum, facility personnel should be trained annually. Training records should be maintained in the SPCC plan for at least 3 years. (See PPA website for SPCC training). 40 CFR 114(f) - General training SPCC.</td>
</tr>
<tr>
<td>SP7</td>
<td>SPCC</td>
<td>Paperwork</td>
<td>Is there bulk storage container tested or inspected for integrity on a regular schedule and whenever repairs are made?</td>
<td>X</td>
<td></td>
<td></td>
<td></td>
<td>X</td>
<td>Confirm integrity according to industry standards per SPCC plan. The owner or operator is required to conduct frequent inspection of the outside of the container for signs of deterioration, cleanings, or accumulation of oil on the outside. Keep comparison records and include the supports and foundations in the inspection. 40 CFR 114(g) - Bulk Storage Container SPCC.</td>

</table>

**UQ2** Used Oil Filters Paperwork

Does the section/district maintain records of recycling of used oil and filter shipments with a TCEQ/EPA registered transporter? X RCO Used oil generators are required to use EPA/TCEQ registered transporters, storage facilities and processors to recycle used oil and used oil filters. Facilities shipping used oil or filters off-site must maintain a copy of the bill of lading. Records should be maintained for 5 years. 40 CFR §766.45 - Offsite Shipment of TAC 339.25 - Used Oil Filter Management and Recycling.

**UQ3** Used Oil Filters Visusi

Are there dedicated, separate labeled containers used for storage of used oil and used oil filters? X RCO Used oil and filters must be stored in separate dedicated tank or drum. The containers must be labeled USED OIL and USED OIL FILTERS respectively. 40 CFR §271.20 - Spill Prevention, Control, and Countermeasures (SPCC) Plan for Facilities 40 CFR §271.25 - Condition of Used Oil Storage Units 20 TAC §302 - Used Oil Filters 10-5-19 Used Oil Management Act (Vista) Updated discharge prohibited. 40 CFR §151 - Oil Pollution Prevention (SPCC) Subsection for Environmental Contaminants in TCEQ Facilities On. 4 - Hauling/Transporting. 20 TAC §102 - Used Oil Filter Management and Recycling 40 CFR §261.48(b)(1) - Delineated.}

**UQ4** Used Oil Filters Visusi

Are the used oil and filter storage tanks/containers covered and in good condition (no severe rusting, apparent structural defects or deterioration) and not leaking? Are the used oil storage areas generally spill-free? X RCO Containers and above ground tanks used to store used oil must be in good condition (no severe rusting, apparent structural defects or deterioration) and not leaking (no visible leaks). 40 CFR §151 - Oil Pollution Prevention (SPCC) Subsection for Environmental Contaminants in TCEQ Facilities On. 4 - Hauling/Transporting. 20 TAC §102 - Used Oil Filters 10-5-19 Used Oil Management Act (Vista) Updated discharge prohibited. 40 CFR §276.45 - Spill Prevention, Control, and Countermeasures (SPCC) Plan for Facilities On. 4 - Hauling/Transporting. 51 CFR §101.25(b) - Useable walls. 51 CFR §101.25(c) - Useable walls. 40 CFR §261.48(b)(1) - Delineated.}

**UQ6** Used Oil Filters Visusi

Is secondary containment in place for all new/used oil tank/drum or grease containers? X RCO Containment could include concrete berm, doublewalled construction or spill pans. 40 CFR §151 - Oil Pollution Prevention (SPCC) Subsection for Environmental Contaminants in TCEQ Facilities On. 4 - Hauling/Transporting. 20 TAC §102 - Used Oil Filters 10-5-19 Used Oil Management Act (Vista) Updated discharge prohibited. 40 CFR §261.48(b)(1) - Delineated.}

**UQ8** Used Oil Filters Visusi

Is oil drained from the used oil filters before storage? X RCO All filtered floating oil must be removed from used oil filters in order to be arrst from being hazardous waste. 40 CFR §151 - Oil Pollution Prevention (SPCC) Subsection for Environmental Contaminants in TCEQ Facilities On. 4 - Hauling/Transporting. 20 TAC §102 - Used Oil Filters 10-5-19 Used Oil Management Act (Vista) Updated discharge prohibited. 40 CFR §261.48(b)(1) - Delineated.
