

Community Impact Assessment

CSJ: 0314-07-051, 0314-07-052,
0314-07-046

Interstate Highway 20 at Center Point
Road

From 0.55 mile west of East
Bankhead Highway to Lakeshore
Drive

Parker County

The environmental review, consultation, and other actions required by applicable Federal environmental laws for this project are being, or have been, carried-out by TxDOT pursuant to 23 U.S.C. 327 and a Memorandum of Understanding dated December 16, 2014, and executed by FHWA and TxDOT.

Community Impacts Assessment Technical Report Form

[Reset Form](#)

Project Name: IH 20 at Center Point Road
CSJ Number: 0314-07-051, 0314-07-052, 0314-07-046
District(s): Fort Worth
County(ies): Parker

COMMUNITY PROFILE

Attach a map showing the community study area boundaries as well as the locations of any community facilities in the area (schools, places of worship, health care facilities, recreation centers, social services, libraries, etc).

I. General Information

What is the location of the community that may be impacted?

The community is located in Parker County and includes portions of the cities of Weatherford and Hudson Oaks along with a few unincorporated areas of the County. The specific community is located along IH 20 from approximately 0.55 mile west of East Bankhead Drive to the IH-20 and Lakeshore Drive interchange.

II. Project Description

Briefly describe the proposed project.

The improvement of the Center Point Road and IH-20 interchange with addition of frontage roads along IH-20. It also includes improvements to the IH-20 at East Bankhead Drive interchange. The length is approximately 3.4 miles.

III. General Character of the Community

What is the name and general character of the community (scattered rural, planned suburban, urban, mixed use)?

The current character is single family residential including numerous mobile homes on moderately sized lots along the south side of IH 20 near Lakeshore Drive. Along the north side of IH 20 from the western terminus to Cinema Dr. East of Cinema Dr., the area is dominated by retail and commercial properties. The remainder and majority of the area is largely undeveloped with scattered developed tracts.

Describe the community facilities (shown on attached map) in the area:

| Name of Facility | Type of Facility | Public or private? | Does the facility serve a specific population? If so, who? | Additional details, if necessary |
|-----------------------------|---------------------------|--------------------|--|----------------------------------|
| Lakeshore Baptist Church | Church | Private | No | |
| Weatherford Fire Department | Municipal Fire Department | Public | No | |

[Reset Form](#)

IV. Data

1. What data sources were used?

Yes U.S. Census Bureau

Yes American Community Survey (ACS)

No Texas State Data Center

Yes Other

If other, describe:

Site visit

Attach tables or thematic maps detailing race (including Hispanics), language, income, disability, gender, and age data for the affected community study area. Tables and maps may be downloaded from FactFinder and the ACS Summary File. Instructions for navigating Fact Finder and ACS Summary File can be found in the Toolkit. A list of tables to use can be found in the Toolkit. If you prefer to use template tables see the Demographic Table Template in the Toolkit.

2. What is the current DHHS poverty level? \$24,300.00

No Do any of the census geographies show over a 50% minority population?

No Do any of the census geographies show a median income below the DHHS poverty level?

Yes Do any of the census geographies show presence of persons who speak English "less than very well"?

Describe:

The three project area census block groups each have 1.8, 3.2, and 2.9 percent of the population who speak English less than very well. These persons are all Spanish language speakers.

V. Site Visit

Yes Was a site visit conducted?

If yes, attach documentation, notes, and photographs from the field visit.

No Were there any signs observed in languages other than English?

No Were there places of worship, businesses, or services that target or serve specific minority groups?

No Were there signs of disabled persons such as ramps on homes or public transportation vehicles or stops specifically designed for disabled persons?

No Were there signs of other vulnerable populations such as children or elderly (presence of day cares, elementary schools or assisted living facilities)?

Yes Were there any signs of low-income families or neighborhoods (subsidized housing, homes or cars in need of repair, used goods stores, low-cost health care facilities)?

[Reset Form](#)

Describe:

The area in the southeast quadrant of the project area has mobile homes, which are sometimes an indicator of low income levels, and some homes in need of repair.

7. No **Are there signs of other modes of transportation?**

8. Yes **Is there any additional information about this community that will be helpful?**

Describe:

This area is not a discreet community in its entirety. Neighborhoods are present, but they are small and widely separated from one another. Other residences in the area are widely dispersed and are often on larger tracts of land.

9. Yes **Is public involvement planned for this project?**

Results from the Scope Development Tool

1. Yes **Did the Scope Development Tool identify the need for a residential displacements analysis?**

2. No **Did the Scope Development Tool identify the need for a commercial displacements analysis?**

3. No **Did the Scope Development Tool identify the need for an other displacements analysis?**

4. Yes **Did the Scope Development Tool identify the need for an access and travel patterns analysis?**

Select the level of analysis identified on the Scope Development Tool:

- Medium risk access and travel patterns analysis
- High risk access and travel patterns analysis

5. Yes **Did the Scope Development Tool identify the need for a community cohesion analysis?**

Select the level of analysis identified on the Scope Development Tool:

- Medium risk community cohesion analysis
- High risk community cohesion analysis

Residential Displacements

Consider the community facilities and vulnerable populations other than EJ populations listed in your Community Profile answers.

1. **How many residences will be displaced or impacted in a manner that would prevent them from being occupied (loss of parking or access)?**

Six previously occupied single family residences.

2. **What type of residences will be displaced (single family homes, apartment, duplexes, etc.)?**

Single family residences were displaced.

[Reset Form](#)

3. Yes Is there comparable replacement housing available?

Explain:

A review of Google Earth indicates that replacement housing is not readily available in the community (within 0.5 mile) due to the small number of residences present nearby; however, a review of an Internet real estate listing site was performed to determine the number of replacement housing units in a larger area. Over 30 houses were for sale at prices ranging from under \$100,000 to \$250,000 within three miles of the project area. Several were available within 1.5 miles.

4. No Would displacements impact community cohesion?

Explain:

Only a minor amount of new ROW (4.02 acres) and 0.42 acre of new permanent easement would be acquired for the proposed interchange project. The project has resulted in six residential displacements. Two barns (possibly large sheds) and no businesses would be displaced. The barns were associated with homesites and were small structures, likely not large enough for commercial agricultural operations. A review of an Internet real estate website indicated that vacant tracts and lots large enough to add a barn to a homesite were also available within a three mile radius. Relocation of the two barns should not have substantial repercussions on the economy of the project area. Since IH-20 is an existing thoroughfare that is primarily surrounded by scattered residences, and because only six residential displacements were required for this project, all residential, socio-economic impacts from this project, including impacts to community cohesion, would be minimal. The project would facilitate the flow of traffic through the area.

NOTE: The conclusion statement should be included in the NEPA document if one is being produced. Upon completion, upload this Documentation Standard to the Community Impacts and EJ section of the Documents page in ECOS.

Conclusion: Based on the information above, how will displacements associated with the proposed project impact the community?

There were only six residential displacements as a result of the project. Some of these persons have already been relocated. The displacements would have minimal impact on the community cohesion due to the lack of a cohesive community in the project area and the improvement of access. This improved access should serve to strengthen connectivity in the project area by providing a more direct travel route between the widely separated groups of residences within and near the project area. The small number of residences affected and the presence of suitable replacement housing within three miles of the project area would mean that the residents could locate within a reasonable distance of the area from which they were displaced, if desired.

ACCESS AND TRAVEL PATTERNS

1. How do people currently access adjacent parcels (car, walking, cycling, mass transit)?

Most persons would currently access adjacent parcels by car, although residents living nearby could walk.

2. Describe the permanent changes to access and/or travel patterns.

The project area includes an Interstate Highway, (IH 20) that has previously impacted access and travel patterns. The Parker County Airport is near, but not in, the project area and would not experience any effects to access as a result of the project. This facility has existed since before 1995 and so would not affect the community. The conversion of two way frontage roads to one way would increase travel times, primarily for people in the southeast quadrant of the project area (in the vicinity of Newell Drive, Renee Drive, Enchanted Oaks Court and others). This is primarily a residential area with a few scattered businesses. No schools are present in this area and the one church observed

Reset Form

would still have access from Lakeshore Drive without a change in the route required to access this church. For trips originating from points to the east or that presently access this area from Lakeshore Drive, instead of turning west from Lakeshore Drive onto the south two way frontage road and traveling west along this frontage road, these persons would now have to drive farther west to Center Point Road, exit to the south on Center Point and then turn back east to reach this area. This would increase the maximum distance driven to the same common point from 0.8 mile to 3.2 miles (an increase of 2.4 miles). Assuming an average speed of 45 miles per hour, this would mean a travel time increase of up to 3.2 minutes for this trip for the persons residing in this area. For most of the project area, access and travel patterns will be greatly improved due to the addition of frontage roads and sidewalks.

3. What neighborhoods and businesses will be affected by these changes?

The residential area in the southeast portion of the project area will see increased travel times for some trips but improvements for others. The remainder of the project area will see improvements in access and travel patterns. Retail and commercial entities include large retail facilities, car dealerships, movie theaters and various other stores and businesses. Access to these entities will be improved as well as to large expanses of frontage along IH 20 with limited or no access. Temporary impacts to the adjoining areas and the traveling public could include closure of the IH 20 mainlanes during overhead bridge construction. Traffic would be diverted onto newly constructed off ramps. The lane closures would last one week or less.

4. Yes Are any community facilities affected?

Are any of them "essential services" such as clinics, schools, or emergency responders?

There is a Weatherford Fire Station located north of IH 20 on Atwood Ct just east of East Bankhead Highway. Access to and from this fire station will be improved by the project, especially to points east of the fire station by the addition of east bound frontage roads. The Lakeshore Baptist Church is located on Lakeshore Drive. Access to this Church by persons living to the west would be improved by the addition of the east bound frontage roads west of Lakeshore Drive. The Parker County Airport is nearby but should not be impacted by the project.

5. How will emergency response times be affected?

For most situations, emergency response times will be reduced due to the addition of frontage roads where none presently exist and by access to IH 20 at Center Point Road. The distance traveled could be reduced by up to 0.5 mile in some areas. Because the roads that would be used to access these areas are narrow local roads, the time to reach these areas could be reduced by two or more minutes.

6. For mass transit, walking, cycling impacts, which mode(s) will be permanently impacted?

There appears to be very little mass transit, and few opportunities for walking and cycling. None of these modes would be substantially affected.

7. How far will the user of this/these modes have to travel to find a comparable route/service? How much time will be added to their trips?

Due to the lack of present routes or services for these modes in the project area, little time would be added to their trips.

8. Yes Are any design elements proposed to mitigate adverse impacts to these modes?

Describe:

The project will include the addition of sidewalks along the entire length of the proposed frontage roads. Sidewalks will not be added to the existing WB frontage road between Center Point and Lakeshore Dr.

Reset Form

NOTE: The conclusion statement should be included in the NEPA document if one is being produced. Upon completion, upload this Documentation Standard to the Community Impacts and EJ section of the Documents page in ECOS.

Conclusion: Based on the information above, how will the proposed project impact access and travel patterns for the community?

For some residents, the conversion of two way frontage roads to one way would increase travel times due to the need to exit IH 20 at Center Point, rather than at Lakeshore Dr. This would be primarily for people in the southeast quadrant of the project area coming from points to the east. For most of the project area, access and travel patterns will be improved due to the improvement of the interchange and addition of frontage roads along the length of the project. The project will increase access to the area by emergency responders due to the presence of east bound frontage roads for the Weatherford Fire Department. For residents, trips to the southeast quadrant of the project area from areas to the west, such as Weatherford or other nearby areas would travel 0.5 mile less and those in the area of Center Point Road and IH 20 would not be able to directly access IH 20 rather than driving over 1.5 miles to access it. Temporary impacts could include closure of the IH 20 mainlanes during overhead bridge construction. Traffic would be diverted onto newly constructed off ramps. The lane closures would last one week or less.

Community Cohesion

Consider the community facilities and vulnerable populations other than EJ populations listed in your Community Profile answers.

1. If there is an existing roadway or other separation, how will the proposed project change that separation?

The project involves the improvement of the interchange of IH 20 and Center Point Road, as well as the addition of frontage roads in areas where none exist. Since IH 20 has existed in the project area for several decades and circulation around IH 20 in this area will be improved, the project will have minimal effects on community cohesion, community facilities and vulnerable populations and reduce the separation presently resulting from IH 20.

2. How would the proposed project change the way that people within the community access other parts of the community and participate in local activities?

Overall, the proposed project would improve the way that people within the area would access other nearby areas and would generally improve circulation within most of the area. Areas such as those around IH 20 at Center Point will have direct access to IH 20 and those areas to the east and west without the circuitous travel now required to reach IH 20. Persons trying to reach the residential area in the southeast quadrant of the project area from points to the west will also have a more direct route into this area.

3. How will the proposed project change the way that people use local services and facilities change?

For most residents, the proposed project would improve access to local services and facilities as well as improve access to the project area by outside service providers. There would be better access to local services and facilities due to the addition of frontage roads where none presently exist, which will connect persons such as those living around IH 20 at Center Point Road to areas along IH 20 and while those persons living in the southeast portion of the project will have longer travel to reach their neighborhood from the east, travel from areas to the west will be reduced.

NOTE: The conclusion statement should be included in the NEPA document if one is being produced. Upon completion, upload this Documentation Standard to the Community Impacts and EJ section of the Documents page in ECOS.

Conclusion: Based on the information above, how will the proposed project impact community cohesion?

Since IH-20 is an existing, controlled access thoroughfare and because the improvements would only require a minor amount of ROW (4.02 acres) and permanent easement (0.42 acre) in areas adjacent to an existing highway, construction of the proposed improvements would not separate, divide or isolate any distinct neighborhoods, ethnic groups or other

Reset Form

specific groups. Due to improved internal access, areas within the project area would be better connected, leading to an improvement of potential interactions of residents within the area.

ENVIRONMENTAL JUSTICE

1. Yes Will there be displacements?

How many are in predominantly minority and/or low income census geographies versus non-minority and non-low income geographies?

Yes, there were six residential displacements. One displacement was in a neighborhood within a census tract with 48% Hispanic population, but there would be none in a predominantly Hispanic neighborhood. There are no block groups with median incomes below the poverty level.

2. Yes Will there be access and travel pattern impacts?

What types of impacts are in predominantly minority and/or low income census geographies versus non-minority and non-low income geographies?

There are no predominantly low-income or minority census geographies. There would be minimal impacts to air and water quality. There would be noise impacts to three single family residences. None would exceed 2 decibels. Abatement is not feasible. There would be no noise impacts in census blocks with > 50 % minorities. A nearby airport was built prior to much of the current residential development. The project would not impact access to or travel patterns associated with this airport and the community should be adapted to the presence of this facility.

3. No Will there be community cohesion impacts?

4. Yes Will the community experience any negative impacts to air quality or water quality from increased noise level or from hazardous materials?

What types of impacts are in predominately minority and/or low income census geographies versus non-minority and non-low income geographies?

There would be increases in noise levels due to the proposed project; however, there are no predominantly low-income or minority census geographies.

5. No Has the community experienced substantial impacts from past transportations projects such as a new roadway causing large number of displacements or introducing a barrier and separating parts of the community?

6. No Has the community experienced substantial impacts from any other major projects such as utilities, industry, etc?

7. No Is there any mitigation proposed to specifically lessen the severity of these impacts on EJ populations?

8. No If there are any impacts to minority or low-income populations would these impacts still be considered disproportionately high and adverse after mitigation has been applied?

Reset Form

NOTE: The conclusion statement should be included in the NEPA document if one is being produced. Upon completion, upload this Documentation Standard to the Community Impacts and EJ section of the Documents page in ECOS. If it is concluded that there will be disproportionately high and adverse impacts to EJ communities, consult the CIA handbook or further guidance.

Conclusion: Based on the information above and information in the community profile, will the proposed project have disproportionately high and adverse impacts on minority and/or low-income populations?

It does not appear that the improvements to the IH-20 at Center Point Road intersection would substantially impact the minority population in the area. This project would provide improved traffic conditions that would allow safer vehicular movement for all traveling in the immediate area. Because the project area reports median incomes well over the 2015 poverty level with only a small percent of the population with incomes below the poverty level, it is unlikely that there would be any adverse impact on low income populations in the project area. The project would not change the function of adjacent roadways and would not disrupt normal daily activities in the proposed interchange project area, nor would it affect travel patterns associated with or access to Parker County Airport to the east. The proposed interchange project would take six previously occupied homes. No major economic or social impacts would be likely.

Limited English Proficiency

1. Yes Were there LEP persons identified in the project area?

What languages do they speak?

Spanish

2. What public involvement techniques were used or is planned to be used?

Please note in the response whether public involvement notices are available to view under the Public Involvement or Community Impacts section of ECOS.

A Spanish speaking staff member was present at the public meeting held on July 14, 2015. If a request for a Spanish interpreter is received for the Public Hearing, one will be provided.

3. No Was assistance in a language other than English requested or is it anticipated to be requested?

4. How were LEP persons accommodated during the public involvement process?

Please note in the response if copies of public involvement materials are available to view under the Public Involvement or Community Impacts section of ECOS.

A Spanish speaking staff member was present at the public meeting.

5. Yes Is any more public involvement planned?

Yes Will LEP persons continue to be accommodated?

NOTE: The conclusion statement should be included in the NEPA document if one is being produced. Upon completion, upload this Documentation Standard to the Community Impacts and EJ section of the Documents page in ECOS.

Conclusion: Based on the information above and public involvement documentation, were LEP persons given the opportunity for meaningful involvement in the NEPA process?

Yes. A Spanish speaking staff member was present at the public meeting held on July 14, 2015 and would be provided if necessary at the Public Hearing that is planned for later this year so all interested parties could provide oral and written

Reset Form

comments and access all programs, services, and information. The persons who speak English less than well speak Spanish. Reasonable arrangements (such as special communications interpreters or accommodation needs) would continue to be available if required to ensure all persons have meaningful access to the programs, services, and information Parker County provides. Through these steps LEP persons were judged to have been given the opportunity for meaningful involvement in the NEPA process.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

Methodological changes to data collection in 2013 may have affected language data for 2013. Users should be aware of these changes when using multi-year data containing data from 2013.

While the 2010-2014 American Community Survey (ACS) data generally reflect the February 2013 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Source: U.S. Census Bureau, 2010-2014 American Community Survey 5-Year Estimates

Explanation of Symbols:

1. An '***' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An '****' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
8. An '(X)' means that the estimate is not applicable or not available.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

The Census Bureau introduced a new set of disability questions in the 2008 ACS questionnaire. Accordingly, comparisons of disability data from 2008 or later with data from prior years are not recommended. For more information on these questions and their evaluation in the 2006 ACS Content Test, see the Evaluation Report Covering Disability.

While the 2009-2013 American Community Survey (ACS) data generally reflect the February 2013 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of

error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

The Census Bureau introduced a new set of disability questions in the 2008 ACS questionnaire. Accordingly, comparisons of disability data from 2008 or later with data from prior years are not recommended. For more information on these questions and their evaluation in the 2006 ACS Content Test, see the Evaluation Report Covering Disability.

While the 2009-2013 American Community Survey (ACS) data generally reflect the February 2013 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Source: U.S. Census Bureau, 2009-2013 5-Year American Community Survey

Explanation of Symbols:

1. An '***' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An '****' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
8. An '(X)' means that the estimate is not applicable or not available.

MEDIAN INCOME IN THE PAST 12 MONTHS (IN 2012 INFLATION-ADJUSTED DOLLARS)

2008-2012 American Community Survey 5-Year Estimates

Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the Data and Documentation section.

Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities and towns and estimates of housing units for states and counties.

| Not living alone | +/-112,754 | 6.3% | +/-6.0 | 117,955 | +/-39,296 |
| PERCENT IMPUTED | | | | | |
| Household income in the past 12 months | (X) | 27.5% | (X) | (X) | (X) |
| Family income in the past 12 months | (X) | 28.7% | (X) | (X) | (X) |
| Nonfamily income in the past 12 months | (X) | 22.7% | (X) | (X) | (X) |

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

While the 2008-2012 American Community Survey (ACS) data generally reflect the December 2009 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2000 data. Boundaries for urban areas have not been updated since Census 2000. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Explanation of Symbols:

1. An '***' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An '***' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
8. An '(X)' means that the estimate is not applicable or not available.

2008-2012 American Community Survey 5-Year Estimates

Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the Data and Documentation section.

Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities and towns and estimates of housing units for states and counties.

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

While the 2008-2012 American Community Survey (ACS) data generally reflect the December 2009 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2000 data. Boundaries for urban areas have not been updated since Census 2000. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Explanation of Symbols:

1. An '***' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
3. An '-1' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An '+1' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An '****' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
8. An '(X)' means that the estimate is not applicable or not available.
