**SEDIMENT BASIN & TRAP USAGE GUIDELINES**

A sediment trap may be used to precipitate sediment out of runoff draining from an unstabilized area.

**Traps:** The drainage area for a sediment trap should not exceed 5 acres. The trap capacity should be 1800 CF/Acre (0.5" over the drainage area).

- Sediment traps should be placed in the following locations:
1. Within drainage ditches spaced @ 500'± on center
  2. Immediately preceding ditch inlets
  3. Just before the drainage enters a water course
  4. Just before the drainage leaves the right of way

The trap should be cleaned when the capacity has been reduced by 1/2" or the sediment has accumulated to a depth of 1', whichever is less.

Cleaning and removal of accumulated sediment deposits is incidental and will not be paid for separately.
