

Project Management Documentation

DART, who will manage this project on behalf of TRE, has success not only in building projects on the TRE but also extensive experience in building LRT project as part of the DART project. DART has constructed and has in operation approximately 72 miles of LRT and an additional 15 miles either under construction or design. In all instances, the projects have been delivered on time and under budget. Similarly on the TRE corridor, DART has completed not only the initial infrastructure improvements necessary to open the TRE service in 1996 but has also constructed a new station and siding at West Irving and a significant double track project including new bridges over the Elm Fork of the Trinity River and double track and new bridges between control points Lisa and E. Perkins. Currently under construction is the \$55 million project Belt Line Grade Separation project, a 2.3 mile double track project which includes an 8,236 foot double track bridge constructed under active passenger and freight traffic in two phases. All work performed by DART for TRE included signals and signals interface with dispatch system. This project is also tending to be completed ahead of schedule and under budget.

The Texas Department of Transportation has an average construction letting of over \$3 billion and lets over one thousand construction projects each year. All of these projects were either developed in house by TxDOT or developed by consultants managed by TxDOT staff and went through the same preliminary engineering and environmental evaluations and analysis that this project will go through.

TxDOT has a large staff of experienced and well trained construction inspectors and engineers who can assist with the final design construction of this project to ensure the timely completion of the project.

Key personnel for TxDOT will be:

William E. Glavin, P.E., Rail Division Director, Project Oversight

Jennifer Moczygema, P.E., Rail Systems Section Director, Project Oversight

Gilbert Wilson, Rail Operations Specialist, Construction Inspection.
