

Construction Production Rates

March 1, 2018

These rates were developed in coordination with the following parties.

<i>Construction Division</i>	<i>Waco District</i>
<i>Bridge Division</i>	<i>Atlanta District</i>
<i>Maintenance Division</i>	<i>The Associated General Contractors of Texas</i>
<i>Design Division</i>	

In accordance with the 2016–2017 Sunset Advisory Commission Staff Report Recommendation 3.7, the Texas Department of Transportation (TxDOT) has updated construction production rate information for estimating project timelines. TxDOT will review and update these rates, as appropriate, by March 1 every two years.

The following assumptions were made in the development of these rates.

- Engineering judgement must be used in the application of these rates.
- Proper critical path method scheduling methods must be used for construction time determination.
- Construction activities must be scheduled according to project phase narrative.
- Single crews will be mobilized for each independent activity.
- Utility construction in plans set is not included in these rates.
- Weather delays are not accounted for in these rates.

The following conditions would likely cause the proposed construction production rates to fall outside the estimated ranges shown, therefore warranting additional effort to determine proper rates:

- Extremely small or extremely large work zones,
- Long distances from materials sources,
- High average daily traffic (ADT) in project area, or
- Extremely low or extremely high quantities of bid items.
