

Project Overview

The Texas Department of Transportation (TxDOT) Pharr District is proposing to construct a raised median along FM 2061 (South McColl Road) from SH 107 to Trenton Road to enhance safety and improve mobility along the corridor.

As this area has grown, TxDOT has seen a steady increase in traffic volumes and in the number of crashes along FM 2061. As traffic increases along a corridor, raised medians are recommended to provide a separation of opposing traffic, reduce left-turn conflict points, and provide extended left-turn lanes to remove turning traffic from through travel lanes.

Roadway Configuration with Median

Project number
1939-01-060

Project Location
Hidalgo County

Project Length
2.8 miles

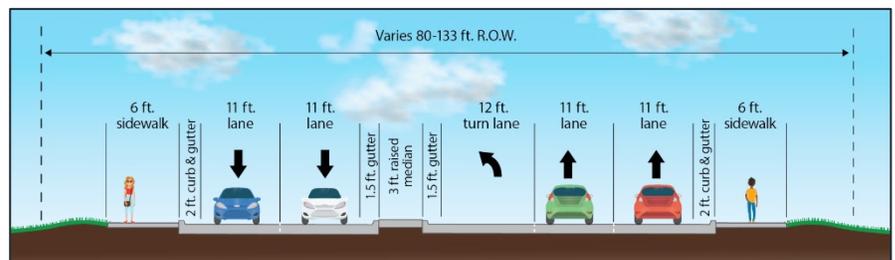

Proposed Improvements

- Construct a raised median
- Provide extended left-turn lanes
- Widen intersections for U-turns
- Construct continuous sidewalks

Estimated Construction Cost
\$9.6 million

Estimated Construction Start
Late 2022 (subject to change)

Roadway Configuration with Left Turn Lane

With the addition of the median, turning traffic will use a new traffic pattern. U-turns are being designed at each signalized intersection to allow traffic to turn and travel the opposite direction or to reach residences or businesses.
