The proposed project is to improve traffic operations and mobility. The existing direct connectors of the I-2 & I-69C interchange are currently one lane bridge structures consisting of one 14 foot wide travel lane with 4 foot wide inside and 8 foot wide outside shoulders. The proposed direct connectors will consist of two 12 foot wide travel lanes with 4 foot wide inside shoulders and 10 foot wide outside shoulders. In addition, the locations of the on & off ramps and the auxiliary lanes between ramps will be optimized. The proposed project would require additional right-of-way (ROW). Additional studies will determine other potential impacts.
