

TEXAS TRUCKING

Trucks are a critical link in the Texas multimodal freight system. Annually over \$1.6 trillion/1.2 billion tons of freight are moved on Texas highways. In 2011, trucks moved over 46% of all freight moved in Texas. By 2040, truck tonnage will increase by 78% and account for 56% of all freight moved. The top commodities moved by truck in Texas include mainly agriculture products: live animals/fish, cereal grains, animal feed, meat/fish, other agriculture products such as fertilizer and milled grain products. Texas has both the largest highway and interstate networks in the nation. Texas is both second in population and vehicle miles travelled annually to California. In particular, I-40, I-30, I-20, and I-10 are vital to the Texas economy as they connect Texas with the western, southern and eastern U.S. economic centers.
