

I-35 at SH 29 FACT SHEET

Why Improvements are Needed

I-35 is one of the most congested highways in Texas. It serves as the backbone of the local, regional and national transportation network. Lack of mobility on I-35 threatens the economic livelihood of our city and our state. Improvements are needed due to population and employment growth, which have caused increased congestion in the project area.

Project Overview

We are taking a smart approach to transportation planning in the I-35 corridor. The purpose of the I-35 at SH 29 project is to improve safety and mobility by replacing the existing narrow bridge that does not meet current bridge height clearance standards over the I-35 mainlanes.

The project includes:

- Mainlane and frontage road improvements
- Intersection bypass lanes
- Replacing and widening the SH 29 bridge over I-35
- Bicycle and pedestrian improvements

While construction has not been funded, the current estimate is \$25.2 million.

Timeline

The environmental study began in late 2018, and will include multiple opportunities for public input.

The environmental study and schematic design are anticipated to be complete in mid-2021. Construction is anticipated to start late 2023. All construction dates are contingent on funding.
