

Special Specification 6111

LED Neighborhood Friendly High Mast (NFHM) Illumination Assemblies

1. DESCRIPTION

Furnish and install light emitting diode (LED) neighborhood friendly high mast illumination assemblies.

2. MATERIALS

Provide new materials that comply with the details shown on the plans, the requirements of this Item, and the pertinent requirements of the following Items:

- Item 441, "Steel Structures"
- Item 442, "Metal for Structures"
- Item 445, "Galvanizing"
- Item 616, "Performance Testing of Lighting Systems"
- Item 620, "Electrical Conductors"

Fabrication plants that produce high mast rings and support assemblies must be approved in accordance with DMS-7380, "Steel Non-Bridge Member Fabrication Plant Qualification." The Department maintains an MPL of approved high mast ring and support assembly fabrication plants.

Provide 6 sets of submittals for the complete luminaire and photometric files in .ies format to the Engineer at the project address and the Engineering Operations section of TRF. Obtain the Engineer's approval on the submittals before purchasing materials and beginning work.

Furnish other high mast components from new material that are in accordance with DMS-11021, "High Mast Illumination Assembly Kits."

Provide prequalified high mast illumination assembly kits from the Department's MPL. When required by the Engineer, notify the Department in writing of selected materials from the MPL intended for use on each project.

Do not provide shop drawings for high mast ring and support assemblies fabricated in accordance with this Item and the details on the plans. For proposed deviations that do not affect the basic structural behavior of the high mast ring and support assembly, electronically submit shop drawings in accordance with Item 441, "Steel Structures." The submission of shop drawings is only required the first time each proposed non-structural deviation is used. Structural deviations from the approved drawings are not permitted.

3. EQUIPMENT

- 3.1. **General Requirements.** Provide asymmetric area lighting, as shown on the descriptive codes. Provide six (6) fixtures on each pole or as shown on the lighting layouts.

Provide LED luminaires listed to UL1598 and suitable for use in wet locations.

Provide internal label or marking with date code of when fixture was manufactured.

- 3.2. **Submittal Requirements.** For each type of luminaire, submit the following documentation:

- 3.2.1. Luminaire cut sheets;
- 3.2.2. Cut sheets for LED light sources;
- 3.2.3. Cut sheets for LED driver;
- 3.2.4. Cut sheets for surge protective device;
- 3.2.5. LM-79 luminaire photometric reports of a complete luminaire meeting this Specification for each optical configuration, from a National Voluntary Laboratory Accreditation Program (NVLAP)-accredited test laboratory located in the United States, that include:
- Name of test laboratory;
 - Report number;
 - Date;
 - Complete luminaire catalog number. Include an explanation if catalog number in test report(s) does not match catalog number of luminaire submitted. Clarify whether discrepancy does not affect performance (e.g. in the case of different luminaire housing color);
 - Description of luminaire, LED light source(s), and LED driver(s);
 - Input power, voltage, current, frequency, and power factor;
 - Goniophotometric report;
 - Correlated Color Temperature (CCT);
 - Color Rendering Index (CRI);
 - TM-15-11 Backlight, Uplight, and Glare (BUG) rating;
 - Photometric file in LM-63 format (i.e., filename.ies); and
 - Photos of luminaires in test position, with test number written and visible on luminaire.
- 3.2.6. Calculations and supporting test data per Section 3.8, "Calculation of Light Loss Factor," indicating specified lumen maintenance life including:
- LM-80 data;
 - In-situ temperature measurement test (ISTMT) reports for representative luminaires according to UL 1598. Include an explanation of how ISTMT reports relate to luminaires submitted for Department use; and
 - TM-21 analysis using the Energy Star TM-21 Calculator to predict lumen maintenance at 70,000 hr. and 25°C.
- 3.2.7. Computer-generated point-by-point photometric analysis of maintained photopic light levels in accordance with Section 3.9, "Performance Requirements," using the .ies files and light loss factor calculated in Section 3.8;
- 3.2.8. Test reports showing results of 3G vibration tests in accordance with ANSI C136.31 for each size of luminaire per Section 3.3, "Housing";
- 3.2.9. Written warranty and warranty service procedures per Section 3.7, "Warranty"; and
- 3.2.10. Nationally Recognized Testing Lab (NRTL) certification to UL 1598.
- 3.3. **Housing.** Provide luminaire housing, lens frame, and door constructed from 96% copper-free aluminum. Meet ANSI 136.31, 3.0 G vibration requirements.
- Permanently and clearly mark the housing with minimum 2 in. tall letters to indicate the photometric type as A, B, or S. Wattage labels are not required on high mast fixtures.

Provide slip fitter that will securely attach fixture to the tenon and ring assembly with a minimum of two bolts and a clamp. Provide a positive means of vertical adjustment, $\pm 5^\circ$ from level.

Do not exceed a fixture weight of 80 lbs. or 2.62 sq. ft. effective projected area.

Fabricate exposed hardware, nuts, bolts, washers, and metal parts from stainless steel or aluminum of adequate thickness as approved.

Provide a passive thermal management system. Do not use fans or other mechanical cooling systems.

Provide fixtures with natural aluminum finish or paint fixtures light gray.

- 3.4. **LED Drivers and Electrical.** Provide luminaire with replaceable LED driver that will operate at 480 volts or as shown in the plans. Provide LED drivers meeting the following specifications:

- Rated case temperature suitable for operation in the luminaire at ambient temperature of -40°C to $+40^\circ\text{C}$;
- Power factor (PF) of at least 0.90 at full input power at the specified voltage;
- Reduced output power to LEDs if maximum allowable case temperature is exceeded; and
- Tolerates sustained open circuit and short circuit output conditions without damage.

Provide a barrier-type terminal block secured to housing for power connection to luminaire in accordance with ANSI 136.14 and ANSI 136.37. Provide lugs with screws for wire sizes up to 6 AWG. Identify each terminal position.

- 3.5. **LED Optical Assembly.** Provide LED optical assembly with nominal color temperature of 4000K. For verification testing, CCT within the range of 3710K–4260K is allowable.

Provide LED optical assembly with a minimum CRI of 70.

Ensure that optical compartment meets IEC Standard 60529-IP66.

For asymmetric fixtures, provide field-rotatable optics or means to rotate fixture. Provide accurate degree-of-rotation and “house-side” and “street-side” markings to ensure proper orientation of luminaires.

- 3.6. **Surge Protective Devices.** Provide luminaire with a surge protective device (SPD), in addition to driver’s internal protection, to withstand repetitive noise transients from utility line switching, nearby lightning strikes, and other interference. Provide SPD that will protect the luminaire from common mode transient peak voltages up to 10 kV (minimum) and transient peak currents up to 10 kA (minimum). Provide SPD tested in accordance with ANSI/IEEE C62.45 per ANSI/IEEE C62.41.2 Scenario I Location Category C-High for Line-Ground, Line-Neutral, and Neutral-Ground. Provide SPD listed or recognized by a NRTL to UL 1449, 3rd edition.

- 3.7. **Warranty.** The manufacturer will replace failed luminaires, when non-operable due to defect in material or workmanship, within ten years of installation with a luminaire that meets all specifications, delivered to the project location.

The warranty must cover maintained integrity and functionality of:

- Luminaire housing, wiring, and connections;
- LED light source(s)—negligible light output from more than 10% of the LED packages constitutes luminaire failure; and
- LED driver(s).

The warranty period will begin 90 days after date of manufacture as shown on internal label, or as negotiated by owner such as in the case of an auditable asset management system. Photocells are subject to the warranties of their respective manufacturers.

- 3.8. **Calculation of Light Loss Factor (LLF).** Submit calculations per IES TM-21 predicting lumen maintenance at the luminaire level using In-Situ Temperature Measurement Testing (ISTMT) and LM-80 data.
- 3.8.1. Meet all of the conditions below.
- The LED light source(s) have been tested according to LM-80. Provide verification from the LED or luminaire manufacturer that the LM-80 report corresponds to the LEDs in the luminaire being tested.
 - The LED drive current specified by the luminaire manufacturer is less than or equal to the appropriate drive current specified in the LM-80 test report.
 - The LED light source(s) manufacturer prescribes/indicates a temperature measurement point (TS) on the light source(s).
 - For the hottest LED light source in the luminaire, the temperature measured at the TS during ISTMT is less than or equal to the appropriate temperature specified in the LM-80 test report for the corresponding drive current or higher, within the manufacturer's specified operating current range.
- 3.8.2. Conduct the ISTMT using the same configuration of luminaires submitted, or another luminaire from the same product family having:
- The same or lower nominal CCT;
 - The same or higher nominal drive current;
 - The same or greater number of LED light source(s);
 - The same or lower percentage driver loading and efficiency; and
 - The same or smaller size luminaire housing.
- Install luminaire as defined by ANSI/UL 1598 (hardwired luminaires).
- 3.8.3. Include in the ISTMT report:
- Photos of thermocouple locations and luminaire in testing position;
 - Ambient test temperature;
 - LED temperature;
 - Maximum LED current; and
 - Full description of luminaire used in test.
- 3.8.4. Calculate LLF for each fixture configuration using the submitted ISTMT data, LM-80 data, and Energy Star TM-21 calculator.
- Provide documentation of in situ temperature at 25°C ambient for the luminaire rating submitted for approval;
 - Calculate the lumen depreciation at 70,000 hr. at the documented in situ temperature at 25°C ambient using the Energy Star TM-21 calculator;
 - $LLF = \text{Manufacturer's documented lamp lumen depreciation (LLD) factor per TM-21 calculations at } 25^{\circ}\text{C at } 70,000 \text{ hr.} \times 0.90 \text{ Luminaire Dirt Depreciation; and}$
 - Total light loss factor is not to exceed 30% system depreciation (0.70) over 70,000 hr.
- 3.8.5. Calculated LLF will be used for design purposes and to determine if luminaire meets the performance specification.
- 3.9. **Performance Requirements.** The Department will evaluate fixtures using submitted photometric data.

3.9.1. **Neighborhood Friendly Type B Asymmetric Fixtures.** The Department will use the submitted photometric data to run the following test in AGI32 with the following settings:

3.9.1.1. **Layout 1:**

- grid 175 ft. wide by 800 ft. long;
- grid points spaced according to IESNA RP-8 for a roadway with fourteen 12.5 ft. lanes;
- poles on one side of the roadway spaced at 800 ft. with 30 ft. setback from edge of grid; and
- 150 ft. poles with six fixtures oriented toward the grid, LLF as calculated in Section 3.8.

3.9.1.2. **Layout 1 Test Criteria for Passing:**

- minimum > 0.20 footcandle;
- average > 0.80 footcandle;
- average/minimum ratio < 4.0:1;
- IESNA TM-15-11 BUG rating with an Uplight value of U0; and

3.9.1.3. **Layout 2 (Backlight Requirements):**

- grid 400 ft. wide by 800 ft. long;
- two poles centered along the width and 800 ft. apart on each side of grid; and
- 150 ft. poles with six fixtures oriented in the same direction perpendicular to the long side of the grid, LLF as calculated in Section 3.8.

3.9.1.4. **Layout 2 (Backlight Requirements) Test Criteria for Passing:**

- IESNA TM-15-11 BUG rating with an Uplight value of U0; and
- maximum < 0.20 footcandle 30 ft. behind the pole and maximum < 0.01 footcandle 150 ft. behind the pole.

4. CONSTRUCTION

Perform work in accordance with the details shown on the plans and the requirements of this Item.

Permanently mark each high mast ring and support assembly with the insignia or trademark of the fabrication plant. Place the mark at an approved location. Galvanize the ring assemblies; assemble the ring halves in the shop to ensure proper fit; and match-mark the ring halves before shipping. Prevent scarring or marring of the ring assemblies. Replace damaged components.

Repair damaged galvanized areas of the ring assembly in accordance with Section 445.3.5., "Repairs."

5. MEASUREMENT

This Item will be measured as each LED neighborhood friendly high mast (NFHM) illumination assembly installed.

6. PAYMENT

The work performed and materials furnished in accordance with this Item and measured as provided under "Measurement" will be paid for at the unit price bid for "LED neighborhood friendly High Mast (NFHM) Illumination Assemblies" of the types specified. This price is full compensation for furnishing, installing and testing light fixtures, LEDs, drivers, wire rope, rings and ring support assemblies; aiming light fixtures; furnishing and installing obstruction lights, hoisting assemblies, power drive assemblies, transformers, conductors on the load side of the high mast pole's disconnect, electrical equipment, electrical cord, junction

boxes and enclosures; conducting system performance testing; and materials, equipment, labor, tools, and incidentals.

New poles for high mast illumination assemblies will be paid for under Item 613, "High Mast Illumination Poles." New electrical services will be paid for under Item 628, "Electrical Services." The Department will pay for electrical energy consumed by the lighting system.
