- Quantities shown are based on an "H" value of 30'-0". For each linear foot variation in "H" value, make the following adjustments:  
Bars V length ~ 1'-0"  
Bars Z length ~ 12'-7"  
Reinforcing Steel ~ 96 Lbs  
Class C Concrete (Columns) ~ 0.55 CY
- Foundation Loads based on "H"=30'.
- This standard may not be used for "H" heights exceeding 30' or exposed pile heights exceeding the values shown in the table. In areas of very soft soil or where scour is anticipated, maximum allowable "H" heights or exposed pile heights must be evaluated by the Engineer prior to the use of this standard.
- When HP14x117 steel piling is specified in the plans, the Contractor has the option of furnishing either HP14x117 or HP16x101 steel piling.
- Maximum average span length allowed for 4 pile bent is 100'.

**MATERIAL NOTES:**

- Provide Class C concrete (f'c = 3,600 psi).
- Provide Class C (HPC) concrete if shown elsewhere in the plans.
- Provide Grade 60 reinforcing steel.

**GENERAL NOTES:**

- Designed according to AASHTO LRFD Bridge Design Specifications.
- Bent selected must be based on the average span length rounded up to the next 5 ft increment.
- For pile bents supporting unequal spans, the shorter span cannot be less than 80 percent of the longer span.
- See Bridge Layout for foundation type, size, and length.
- See Common Foundation Details (FD) standard sheet for all foundation details and notes.
- These bent details do not support the use of multi-pile footings as shown on the FD Standard.
- See Standard Erection and Bracing Requirements (SBBR) standard sheet for location and size of anchor bolt required for erection bracing.
- These bent details may be used for the beam types and span lengths shown on the standard SSB-28 only.

Cover dimensions are clear dimensions, unless noted otherwise. Reinforcing bar dimensions shown are out-to-out of bar.
