GENERAL NOTES:
- Provide concrete paving according to TxDOT Standard Specifications for Highway Construction, Item 601.1.0 reinforcing steel shall be provided for any reinforcement indicated in the plans.
- Provide longitudinal joint details as shown on the Longitudinal Saw Cut Joint Detail.
- Multiple joint bond breakers are acceptable at longitudinal construction joints.
- Provide a minimum joint opening of 1/8" for longitudinal construction joints.
- Provide a minimum joint opening of 1/16" for transverse construction joints.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/2" for transverse construction joints at bridge approaches.
- Provide a minimum joint opening of 1/4" for transverse construction joints at bridge approaches.
