The image contains a table and a diagram related to pipe culverts. The table lists various dimensions and quantities for different types of pipes, including lengths, diameters, and the number of spaces. The diagram illustrates the layout of a pipe runner and anchor pipes, emphasizing the dimensions and layout considerations for pipe culverts with flared wings. The text provides specifications and notes for the installation and design of these structures. The page includes special notes and formulas for calculating total pipe lengths and other relevant measurements. The content is specific to Texas Department of Transportation highway standards and applies to 15° skew pipe culverts.
