1. Tighten cable until taut. Cable is considered taut when it does not deflect more than 1" when pressure is applied by hand in an up and down direction. Restrain the cable with pipe wrench or locking pliers while tightening nut with a wrench to prevent cable from twisting.

2. Guardrail installation height to be 31" above finished grade, +1", -0".

3. Refer to MATT Assembly Manual for additional details.

4. Only attach the MATT directly to other strong post double sided W-beam guardrail systems, see manual for details.
