Subject: Roadway Standards Compatible in both SS10 environment, and Connect Edition

The Roadway Standards DGN files have been updated to be compatible in both the SS10 environment, and the Connect Edition (Bentley Apps). There are no new differences in the actual appearance, and depictions of the standards; they are simply now compatible for either platform and are available for immediate use as needed. The standards are available from the [Roadway Standards web page](#) in Microstation® "dgn" and Adobe "pdf" format. Please distribute this information to the appropriate district staff and area offices, as well as consulting engineers working on TxDOT projects.

This update will facilitate the continued migration to the Connect Edition (Bentley Apps) platform and models, as well as provide compatibility for those projects that are still being done in the SS10 environment. As communicated in a [March 23, 2022 memo](#) from Design Division, all designers are expected to use the Connect Edition platform for all projects that began after June 1, 2022.

Additional information on the Connect Edition Rollout and functionality can be found on Design Division: [Plan Development Section's Crossroads page](#).

If you have any questions regarding the standards, please contact Kenneth Mora, P.E., Roadway Design Section Director at (512) 416-2678; for questions regarding the use of Connect Edition please contact Jacob Tambunga, P.E. Plan Development Section Director at (512) 416-2051.
