Pavement Markers and Traffic Buttons

The following manufacturers for pavement markers and traffic buttons have complied with DMS-4200, “Pavement Markers (Reflectorized),” or DMS-4300, “Traffic Buttons.” These Specifications describe the pre-qualification procedure.

The materials listed below are pre-qualified for use when DMS-4200 or DMS-4300 is referenced. These materials require no further testing before use unless deemed necessary by the Project Engineer or Materials and Tests Division (MTD). Tex-729-I, “Sampling Traffic Markers,” describes the sampling procedure.

Note: DMS-4200, “Pavement Markers (Reflectorized),” has been revised. The “High Volume” and “Low Volume” designations will no longer be used. The markers listed below may be used for either high volume or low volume applications when specified.

The Department reserves the right to conduct random sampling and testing of pre-qualified materials to verify performance and Specification compliance and to perform random audits of documentation. Department representatives will sample in accordance with Tex-729-I and may sample material from the manufacturing plant, the project site, and the warehouse.

For more information, contact the MTD’s Coatings and Traffic Materials Section at (512) 506-5870.
