APPEARANCES

COMMITTEE MEMBERS PARTICIPATING VIA WEBEX:

- John McBeth, Chair
- Jim Cline, Vice Chair
- Marc Whyte
- J. R. Salazar
- Ken Fickes
- Dietrich Von Biedenfeld

TxDOT PARTICIPATING VIA WEBEX:

- Eric Gleason, PTN Director
- Josh Ribakove, PTN Business Operations Mgr.

OTHER PARTY PARTICIPATING VIA WEBEX:

- Jimmy Cardenas, Texas A&M Transportation Institute

MEETING AGENDA

ITEM

- 1 Call to Order.
- 2 Guidance on virtual meeting participation.
- 3 Approval of minutes from April 28, 2020 meeting. (Action)
- 4 Approval of minutes from May 26, 2020 meeting. (Action)
- 5 Presentation and discussion on rural ridership trends. (Action)
- 6 Public Comment - Public comment will only be accepted during the meeting. Link and details are below. The meeting transcript will be posted on the internet following the meeting.
- 7 Propose and discuss agenda items for next meeting; confirm date of next meeting. (Action)
- 8 Adjourn. (Action)

1 PROCEEDINGS

2 JOHN MCBETH: As the Chair of the Public
3 Transportation Advisory Committee I, John McBeth,
4 hereby convene the meeting and we'll first of all go
5 over a few housekeeping items. I want to remind
6 everyone that is on the call that's a member of the
7 PTAC to please identify yourself before you begin
8 speaking so that everybody that's on the call from
9 elsewhere knows who is speaking. For standard motions
10 such as the minutes and adjourning the meeting I will
11 call on specific members that are on the call to make
12 those motions. And on any other motions -- anybody
13 wishing to make a motion, please identify yourself so
14 the court reporter know who's trying to make the --

15 JIM CLINE: Josh, can you hear me okay? This
16 is Jim Cline.

17 JOHN MCBETH: I can hear you, yeah.

18 JOSH RIBAKOVE: Yeah, Jim, we can hear you
19 now. And we do have a quorum now.

20 JOHN MCBETH: Great, we now have a quorum.
21 So, I will go ahead and hit Item Number 1, call to
22 order. Welcome, everybody. We don't have to have a
23 Safety Briefing because we're all safe in our own
24 little offices. Josh if you would, would you tell us
25 who is on the call?

1 JOSH RIBAKOVE: Sure. It looks like we've
2 got a full Committee right now. John, we've got the
3 Chair, you're on. Jim Cline is our Vice Chair and he
4 is on. Ken Fickes is on. Marc Whyte is on. Dietrich
5 Von Biedenfeld is on. Eric Gleason, Division Director
6 of PTN is with us as well.

7 JOHN MCBETH: Great. We now know who is on
8 the call. Josh, if you have anything to add as far as
9 virtual meeting protocols, please go ahead and make
10 those comments.

11 JOSH RIBAKOVE: We will have a Public
12 Comments section of the meeting later on further down
13 the Agenda, but if you have a comment that you would
14 like to make related to any Agenda Item as it rolls out
15 or earlier, you can let me know by the WebEx chat
16 feature that goes along with this meeting. I'm
17 monitoring that as well as the Q&A. And we will
18 solicit the comments again when that Agenda comes up
19 just to check and see if anyone has anything they
20 (indiscernible). Please do identify yourself when you
21 make the comment and let us know what organization
22 (indiscernible).

23 JOHN MCBETH: Great. I will move on to Item
24 Number 3 since we have a quorum, approval of the
25 minutes from April 28, 2020 meeting. If I could have a

1 motion from Ken and a second from Jim, I would
2 appreciate it.

3 KEN FICKES: This is Ken, I so moved.

4 JIM CLINE: This is Jim, second and motion.

5 JOHN MCBETH: We have a motion and a second.

6 Any discussion? Hearing none, I'll call the motion.

7 All in favor say aye.

8 ("Aye" stated in unison.)

9 JOHN MCBETH: All opposed, nay -- nay. All
10 ayes, no nay's, the minutes passed.

11 We then have Item Number 4, approval of
12 minutes from the May 26, 2020 meeting and if I could
13 get a motion from J.R. and a second from Marc, I would
14 appreciate it.

15 J.R. SALAZAR: Sure can. I move to approve
16 the minutes of May 26, 2020.

17 MARC WHYTE: Second.

18 JOHN MCBETH: We have a motion and a second.

19 Any discussion? Hearing none, I'll call for a vote.

20 All in favor signify saying aye.

21 ("Aye" stated in unison.)

22 JOHN MCBETH: All opposed by nay. Hearing
23 all ayes and no nays, those minutes also passed.

24 We'll move on to Agenda Item Number 5 which
25 is a presentation and discussion of rural ridership

1 trends and I assume that Mr. Gleason's going to lead
2 off on this.

3 ERIC GLEASON: Thank you, Mr. Chair.

4 JOHN MCBETH: Eric, the table is yours.

5 ERIC GLEASON: Good morning everyone. So, we
6 have a Texas A&M Transportation Institute with us this
7 morning. I think Jimmy Cardenas and is Michael on the
8 phone as well?

9 JIMMY CARDENAS: Good morning. Michael is
10 not on the phone this morning.

11 ERIC GLEASON: Okay. So, it's just gonna be
12 Jimmy. Alright. So, we -- one of the things we've
13 talked to the Committee about in the past and have been
14 looking at ourselves is to try to wrap our arms around
15 transit rural ridership -- Rural Program ridership.
16 And so we asked TTI to take a look at over the past 5
17 or 6 years and to see if they could do an analysis of
18 the trends, identify anything that was note worthy and
19 to bring that discussion to the Committee. I think --
20 and so I think I want -- if I could ask Committee
21 perhaps to listen to this on a couple of different
22 levels. I think the -- the first level obviously is
23 the specifics of the presentation around rural
24 ridership. I think as well that it's been interesting
25 topic and one that is a continuing interest to the

1 Commission the more general notion of performance.
2 Obviously, ridership is a big part of that but
3 particularly in the Rural program when, you know, we
4 have a basic responsibility of providing a Basic
5 Mobility Network, access services is as important as
6 well. So, the whole notion of, you know, watching
7 performance, understanding trends, what is the right
8 set up performance indicators to be using for the Rural
9 Program in particular, and those kinds of things I
10 think are the substance possibly of an ongoing
11 conversation with the Committee.

12 So, I'm gonna turn it over to Jimmy right now
13 and let him walk you through the presentation. And
14 then, you know, questions along the way, please chime
15 in, save them for later, that's fine as well. And
16 we'll kind of circle back I think at the end of this
17 and talk specifically perhaps about your thoughts on
18 this and then you know, talk a little bit more about
19 just performance in general. So, with that, Jimmy.

20 JIMMY CARDENAS: Alright, thanks Eric. Good
21 morning. My name is Jimmy Cardenas with the Texas A&M
22 Transportation Institute and Eric did a good
23 introduction for the presentation I'm about to go over
24 looking at our project at examining the ridership
25 trend.

1 Next slide, please. So, some spoiler alerts
2 up front. As Eric mentioned, ridership -- rural
3 ridership has been general decreasing since 2014. The
4 project, research did not find a singular identifiable
5 cause. We couldn't point to any one thing and say
6 this is causing the rural ridership decline. We have
7 some ideas and -- that could be contributing to that,
8 and we'll go over that today. And it's important to
9 note that each region is unique, so there are different
10 challenges and subsets of what causes the trend in each
11 particular transit district and region so it's
12 important to keep that in mind as we're looking through
13 this.

14 Next slide, please. So, going over what TTI
15 did it's important to note that (indiscernible) the
16 passenger trips is what we're referring to as ridership
17 from here on out. And our research included a
18 Literature Review of ridership transit across the US to
19 kind of put some context around what we're looking at
20 here in Texas in the rural side. Then we go down into
21 the rural ridership data from the past 5 years and
22 that's -- in this instance it's 2014 to 2018 because
23 the 2019 numbers when we started weren't finalized so
24 we're looking at that timestamp from '14 to '18. Then
25 we looked at what we found in the Literature Review and

1 we tied it in to see if anything was applicable in
2 Texas, which we're referring to as our contributing
3 factors. And we also reached out to some transit
4 agencies to get their perspective on what was -- what
5 they thought was causing the rural ridership trend to
6 decline.

7 And we're gonna go ahead and skip ahead to
8 the -- we're gonna look at the Rural Ridership
9 Analysis. So next slide please. So, this Analysis was
10 kind of a three-pronged approach. We looked at the
11 ridership data for any big outliers or errors and we
12 tried to correct for that, and I'll go over that --
13 those in a minute. We also just did a high-level
14 review of ridership change by funding source or by trip
15 category. And we also -- one of the last things we did
16 was look at population change within the rural transit
17 districts to see how that was changing from that
18 timestamp.

19 Next slide. So, while reviewing the data for
20 ridership, one of the first things we did was to remove
21 Galveston County rural from the totals that we see in
22 2014 to 2018. So, if you look at the original totals
23 including Galveston county we see 6.5 million passenger
24 trips in 2014, and then 4.6 million passenger trips in
25 '18, so this -- this alone is a 29% decrease in

1 ridership. However, if we remove Galveston County
2 rural, we see that number in 2014 is 5.6 and then it
3 goes from 5.6 to 4.6 million in '18 so that's -- in
4 actuality an 18% decrease because Galveston county was
5 skewing that data since they're not reported in '18
6 that's gonna be moved back to the urban section. So
7 that's already an 11% change just removing Galveston to
8 get a more accurate number. And we'll look at that --

9 ERIC GLEASON: Jimmy?

10 JIMMY CARDENAS: I'm sorry, yes?

11 ERIC GLEASON: Jimmy, this is Eric. I wonder
12 if I could just jump in for a second for some context
13 for some folks who may not be familiar about some
14 (inaudible). In Galveston, with the 2010 Census
15 following Hurricane Ike in 2008, Galveston went from an
16 area -- an urban area in the 2000 Census of over 50,000
17 population. The Hurricane in 2008 and then when they
18 counted in 2010, the population fell below 50,000 and
19 that triggered a re-designation of Galveston as an
20 urban area transit system, they became rural. And then
21 in the 2018 timeframe, I think it was '18, maybe '17,
22 they managed -- they were successful at the federal
23 level in attaining an exception to those 2010 Census
24 results and they were granted a reclassification back
25 into urban area. And the reason at the federal level

1 that that is so important is because per capita funding
2 amount for the Urban Program, it's about 2 ½ times
3 higher than the per capita funding amount for the Rural
4 Program. So, from a federal funding standpoint it was
5 very much to Galveston's advantage to be an urban area.
6 So, this Analysis recognizes that and this simply
7 removes them entirely from this timeframe.
8 (indiscernible).

9 JIMMY CARDENAS: Sure. Okay. Thank you for
10 that background, Eric. And so on the next -- the next
11 slide, please Josh, we see the trend with Galveston
12 removed. So we that trend starting from 5.6 million
13 all the way down -- and we actually included the 2019
14 number in this chart, 4.72, so there's a big drop from
15 '14 to '15, from '15 to '16. And then we see a general
16 leveling out and then some increases later.

17 Next slide, please. So, while we're looking
18 at the data, the next thing that we did was to identify
19 some transit districts with data reporting problems in
20 2014. That subsequently corrected those problems when
21 reporting for the following years. So, what we did is
22 we moved -- removed those trips completely from 2014.
23 So that resulted in a 4.9 million trips number and then
24 the 4.6, which is a 6% decrease from -- so, what does
25 that really represent? So, when I say "we removed all

1 the trips" that's what we did and that's how we got
2 that 4.9 million passenger trip number in 2014. So in
3 actuality those two transit districts they didn't have
4 zero trips, right. So, what that 6% decline number
5 represents is really a floor for what we're looking at
6 for the actual ridership change and if we can go to
7 that next slide, please Josh.

8 So in this same graph we see that 4.9 number
9 and it's helpful to visualize the real -- the actual
10 trend number to start from in 2014 falls between 4.92
11 and 5.65, so we're pretty confident that the 5.65
12 number is not accurate. And we're also confident that
13 its not as low as 4.92 so the real number falls
14 somewhere in between those two points.

15 Next slide, please. And yeah, it's important
16 to highlight again the next remaining slides will focus
17 on our 2014 to 2018 numbers.

18 Next slide, please. So, another thing we
19 wanted to map out were the changes by transit district.
20 And essentially what this map shows is the high-level
21 view of the changes from 2014 to 2018. So basically,
22 what you're seeing right now, the green -- the light
23 green represents transit districts that gained
24 ridership, essentially, from that timespan. The yellow
25 represents transit districts that sort of remain

1 steady. So, they fell between 10% -- plus 10% or minus
2 10% so they somewhat remain constant for all intents
3 and purposes. And the orange represents transit
4 districts that lost ridership during that time span.
5 Now, another note to -- another mental note when
6 looking at this map is to realize that these -- the
7 transit districts are representative of how -- that the
8 boundaries are representative of how they are
9 currently, right. They don't include the boundaries of
10 the transit districts in 2014. So that's important
11 because during that time there are several transit
12 districts that changed service areas, right. Some area
13 either lost counties or gained counties and this sort
14 of skews some numbers when you're looking at transit
15 district by district level so it's not entirely -- not
16 entirely fully accurate to say that this is the exact
17 change for each of these transit districts. There're
18 underlying changes that may affect some of those
19 numbers. So, this is really just a general view to
20 kind of see the changes at a district level. But it's
21 important to realize the Study in itself is kind of
22 like a statewide level. So this is an attempt to kind
23 of look at the changes at a district level.

24 And our next slide. So next thing we looked
25 at were trips by category. If you're familiar with the

1 PTN128 system for agencies on the line but with these
2 in actuality are are trips by funding sources between
3 2014 and 2018. So, the Funding Sources Table here
4 shows you the categories for those. And it's important
5 to note that General Public represents Section 5311
6 funding as well as Rural State funding. And another
7 major thing to notice that the largest trips -- the
8 largest amounts of trips fall really into only a few
9 programs; that being the Medical Transportation
10 Program, General Public, or Section 5310 and then JARC
11 funding, which we'll go over. So really those four
12 programs contain the most trips.

13 So when we look at the next slide what we see
14 that these three programs; General Public, Medical
15 Transportation Program or NEMT, more commonly known and
16 JARC, they represented the majority of that loss -- of
17 that decrease, right, from 2014 to 2018. And that
18 makes sense because a lot of the trips are in these
19 pods, if we look at them by trip category.

20 So, let's go over these generally. So,
21 Medical Transportation Program, NEMT, we know that from
22 '14 to '18 there's a lot of transit districts either
23 lost contracts for NEMT or decided not to engage those
24 contracts or take those trips on. And so that
25 contributed to a lot of the decline of the Medical

1 Transportation Program.

2 We know that JARC as a fund -- as a category
3 is no longer as a MAP21, it doesn't exist as a funding
4 category. Now the revenue didn't disappear, it got --
5 it merged with Section 5311 and then 5307 for urban
6 areas. And we'll go into that in the next slide but
7 it's important to realize on this slide that General
8 Public as well, that's the other (indiscernible)
9 question, right. What's driving the General Public
10 loss in ridership? And that's what the second half of
11 the presentation will try to go over and identify some
12 contributing factors.

13 And if you look at the next slide, we'll see
14 the trend -- it's all just interesting to graph out the
15 trend in General Public rides and JARC rides/trips.
16 So, we know that JARC funding from '14 to '18,
17 essentially transit agencies are just trying to spend
18 down the remaining JARC funds that they have. So when
19 we're looking at this initially, we're wondering --
20 well maybe, you know, did these JARC trips, did they
21 just disappear? Or what happened to these trips in
22 JARC? And we know that the funding didn't disappear,
23 it actually went into the what we call General Public
24 here 53 -- Section 5311, so it's interesting when we
25 look at the sharp decline in JARC from 2016 to 2017 we

1 see a bump in General Public. So, we can't definitely
2 say that this is -- these are the JARC trips that we're
3 seeing jumping into the General Public but it's
4 interesting to note that we're not necessarily losing
5 those trips from JARC. So they maybe being captured in
6 the General Public bump right there. So I thought that
7 was interesting to note.

8 And if we go to our next slide, the last
9 thing we looked at in our Analysis was the population.
10 So we used 2013 and 2017. The reason being the rest of
11 the numbers here are from 2014 and 2018, is that the
12 2017 numbers were the latest we had for population
13 estimates by transit district. So to keep that five
14 year time span we went from '13 to '17. And what we
15 see is that there's actually an increase in rural -- in
16 population for the rural transit districts. It's a 13%
17 increase. So if we're looking at population as a, you
18 know, maybe a big contributing factor we kind of have
19 of to look elsewhere. And we also see urban areas are
20 increasing as well.

21 And another thing to note, so this is the
22 statewide total for population at the rural level for
23 transit districts. So does that mean that every rural
24 transit district is increasing in population? No.
25 Does that mean that every county is increasing? No.

1 We know that there's counties and some transit
2 districts that are also decreasing in their population
3 numbers but on a whole we have an increase, a big
4 increase at the rural level.

5 And next slide please. So moving from our --
6 look (indiscernible) in the data from the -- our rural
7 ridership data, let me start tying in what we found in
8 the Literature Review. So overwhelmingly a strong
9 economy as well as the remaining factors here are what
10 comes up in our Literature Review from the recent
11 literature in the past five years. If we go to our --
12 in our slide, we'll see some of the national highlights
13 for the national trend is that during that time from
14 '15 to '18 there was a rise in car crashes and vehicle
15 sales. And that was also spurred on by low gas prices
16 and low interest rates for car loans.

17 A lot of the literature also mentioned that
18 what ties into higher ridership were providing more
19 service days, having low fares, et cetera, some of
20 these things we know already. And also, in the past
21 five years we've seen an increase in alternative modes
22 of transportation, T&C's, delivery services. Of
23 course, putting in context with the rural, we have to
24 look at that limitedly, right. We -- a lot of these
25 changes for alternative modes of transportation are

1 prevalent in urban areas. So that's also something to
2 keep in mind when you're looking at that as a factor.
3 And from the national level, we're seeing, this is not
4 on the slide, but it's a 6.6% decrease of national
5 transit ridership. So that's everything, urban to
6 rural. If we take out the rural, it's 5.4% decrease
7 for those trips from that time span to get more some
8 more perspective in the national side.

9 If we go to the next slide we'll look at --
10 well, let's look at Texas. So, if we put this context
11 at the US level, what's happening in Texas? So,
12 personal income grew 3.7% annually. So that's a
13 compound annual growth that we saw -- that Texans saw
14 in their personal income from 2014 to 2018. And as we
15 know, and it was documented in the literature that
16 higher amounts of income relate to less trips on
17 transit.

18 Gas prices also followed the national trend,
19 generally decreasing from their highs in 2014. We see
20 a little tail end bump in 2018 but then that decreases
21 again, (indiscernible) 2019 on here. And, as I was
22 mentioning earlier there are a wider availability of
23 delivery services now. Amazon or Wal-Mart, these
24 stores are providing free delivery services for things
25 that you would find in store, for instance.

1 In our -- if we go to our next slide -- so
2 that -- and that wraps up kind of our Literature Review
3 perspective.

4 So, then our last thing we wanted to do was
5 get a transit agency perspective on what the agencies
6 thought or felt was contributing to the statewide
7 decrease in ridership at the rural level. So, we
8 reached out to 15 transit agencies based on their
9 ridership trends and some of their effectiveness
10 performance measures and we asked what they felt was
11 the cause behind the rural ridership decrease. And
12 then four of those agencies sat down for a phone
13 interview.

14 So, some of the perspectives we heard they
15 included, you know, rural population decline in the
16 rural areas, right. Which we just showed that at a
17 statewide that's actually the opposite. And then they
18 also merit some of the things we found in the
19 Literature Review such as increased car ownership.

20 And on the next slide we talked to four
21 agencies specifically to get their perspective from the
22 agencies, from their side as well their general ideas,
23 a little bit more on the statewide side.

24 So, we go to the next slide, please. So
25 these are the four agencies we talked to. And just to

1 summarize their perspectives, it's important to note
2 that some of these agencies were impacted by their MTP
3 Program, their Medical Transportation Program or NEMT
4 trips that they decided to not take as many MTP trips
5 or if they lost their contracts for those trips. So
6 they were effected by that during that time span.
7 Several of these agencies mention that the marketing
8 services, they found that there was a lack of awareness
9 in the community. That they wanted to increase their
10 marketing services to provide more information on what
11 services they're providing in the service area.

12 And in summary, it's really important to note
13 that each of these transit districts and for transit
14 districts across the Rural Program, they're very
15 unique, right. And they're -- they have their own
16 different sets of service areas, geographies, which
17 could cause different context and challenges in and out
18 of itself. And there's different needs within their
19 own communities and their populations within their
20 service area. So that also may contribute to the
21 outcomes in ridership change.

22 If we go to our next slide, so what are our
23 other big takeaways? Kind of wrapping this all up. We
24 know that rural ridership loss is occurring in Texas,
25 but we see it's not the big value we see at our point

1 to point comparison. It's not 29%. So, we can drill
2 it down between 6 and 18%, really. We know it's not --
3 we know it's not 18% so it's probably somewhere in the
4 middle there. That's really what -- the realistic
5 number that we're looking at. And there's also a
6 gradual trend upwards since 2016.

7 Now unfortunately we don't know if that trend
8 would have continued in 2020 because of the pandemic
9 this year, so we'll never know unfortunately since
10 everything will be skewed downward. So that's also one
11 thing to note, this is, you know, everything that we
12 looked at was pre-Covid-19, so.

13 So, what are some of the contributing
14 factors, just to wrap up specific to Texas? We saw
15 personal income growth in Texas as well as at the
16 national level. We also saw low gas prices and a
17 national trend of car purchases. And I put more
18 delivery services here because I think it's really
19 important to note that what we think of traditional
20 transit trips to the grocery store or to run some
21 errands or go to the mall, these sort of non-work type
22 trips, right, there's a lot of new delivery services
23 that have appeared since 2014. And that involves even
24 restaurant delivery, grocery delivery, so there's more
25 of an unexplained sort of, I guess an area of more

1 research to see how much this may be affecting or
2 replacing trips on transit. And of course, to go back
3 to the overarching thing that these ridership trends do
4 vary across the different transit district. So that's
5 very important to still keep in mind. And with that
6 I'll open the floor to any questions.

7 JOHN MCBETH: Are there any questions? This
8 is John.

9 J.R. SALAZAR: This is J.R., I have one
10 question. Let me, Josh, let me try to find that slide.
11 I believe it's the -- with the percentages above 10%,
12 minus 10%.

13 JIMMY CARDENAS: It's the map.

14 J.R. SALAZAR: Yes. Ridership Change, at
15 first when I read this, I thought that that was a typo
16 on the yellow which says minus 10% to 10%. That is
17 correct, right? When I read that I thought that should
18 be 1% to 10% but that is correct.

19 JIMMY CARDENAS: That is correct, J.R. The
20 reason for that, we wanted to show agencies that were
21 kind of more or less what I consider constant through
22 that time. If your familiar with the MTD Annual
23 Review, they look at 10% threshold as well as TxDOT,
24 when we're doing the annual PTN 128 reviews. So we
25 felt that was a good threshold to set that yellow

1 marker to essentially mean that these agencies were
2 more or less constant through that time frame.

3 ERIC GLEASON: Jimmy, this is Eric. Josh,
4 can you find that map?

5 JOSH RIBAKOVE: Looking for it, Eric. Let me
6 scroll through some slides and let me know when we get
7 there. It's a map slide.

8 ERIC GLEASON: It's about midway. There it
9 is, right there. Thank you.

10 JOSH RIBAKOVE: Okay.

11 ERIC GLEASON: So this -- I think this is a
12 useful picture to the extent that, you know, I think
13 you can draw some general conclusions that once we
14 eliminate some of the outliers that we have a -- we
15 have a general decline occurring virtually throughout
16 the entire state. Even the green in the south that you
17 see there, where it's more than 10% in both cases those
18 transit districts took on additional service area
19 during this timeframe. And so, the ridership increased
20 is actually more reflective of just picking up
21 additional service area and ridership that the previous
22 district used to have but no longer does. So, it
23 doesn't represent an increase at the state level as
24 much as an increase for the transit district itself.
25 So as Jimmy pointed out there are some flaws and some

1 nuances if you will to looking at this. But I think
2 the overall picture is accurate. And, you know, with
3 the orange being greater than 10% and we know from the
4 Analysis that we think it's somewhere between 18% as a
5 ceiling and 6% as a floor this matches that conclusion.

6 You know, I think the -- the -- when you look
7 nationally and you look at the experience in the
8 industry in general, I think less is understood about
9 what drives Rural Program ridership. As opposed to how
10 much is understood about what drives urbanized area
11 ridership.

12 The Rural Program has a Basic Mobility
13 Network, you know, we're not buy and large, rural
14 transit districts are not chasing after choice riders
15 like a lot of the large metropolitan areas are. And
16 so, when you have what essentially a basic mobility
17 system then some of these national trends that are
18 accurate predictors of urban area ridership changes not
19 so much a rural. But I think you can say that as
20 income goes up that car ownership would likely go up.
21 And we what we know about Texas in this timeframe,
22 particularly with the oil shell development, is that
23 we're a lot, you know, we had a worn economy and it
24 wasn't limited to only the large metropolitan areas.
25 And so, you can understand in this time frame why

1 income and car ownership might trend in a direction
2 that would discourage ridership.

3 On the other hand, you've got gas prices that
4 particularly at the rural districts are a much larger
5 share of the operating budget than gas is typically for
6 urbanized area services. And the national experience
7 would suggest that gas is, you know, anywhere from 7 to
8 10% of an operating (indiscernible) budget, when in
9 fact the rural experience in Texas can save as much as
10 20%. So, a lot more sensitive to gasoline prices. And
11 of course, if your gasoline -- if fuel is 20% of the
12 budget and we see a significant decline in the price,
13 then you can offer more service in theory. And so, you
14 know, the trends work in different ways and there may
15 be a message there, but I think at the end of the day
16 the stronger message that comes out is the uniqueness
17 of these districts story that while in general we may
18 see a decline we have systems that are going up, we
19 have systems that are going down at any given year.
20 Some systems are very sensitive to changes in funding
21 sources. At a statewide level the major changes to
22 seem to be in both the general Rural Program ridership
23 as well as in the Medical Transportation Program
24 ridership. So its when we get down to the district
25 level that I think we get the answers we need to

1 address performance issues. There is no statewide
2 silver bullet in my view.

3 What we do as a Program to try and work on
4 performance, we really come at it in two different
5 ways. The first way we come at performance is in the
6 formula that allocates the state rural funds and the
7 majority of the federal rural program funding, gets
8 allocated by a formula and 35% of that allocation is
9 based on transit and district performance relative to
10 other transit districts in the states. And that looks
11 at things like cost per mile, ridership per revenue
12 mile and local contributions to funding.

13 And so, we do factor in performance into the
14 allocation. We also, for like Training and Technical
15 Assistance Program, provide individual districts with
16 the opportunities to work on performance related
17 issues. We have, through our Training Program, we are
18 now offering a Business Development Plan -- a Business
19 Plan Development where -- and a part of that Business
20 Plan, that five-year Business Plan is focused on
21 performance. So as individual agencies take this
22 Business Plan Development course, we can get to
23 establishing performance targets within each agency.
24 How are we gonna measure it? What are you measuring?
25 How are you tracking towards that?

1 We also have a Technical Assistance Program
2 where consultant services that we have on retainer are
3 available to transit -- rural transit districts to come
4 in and assist with an operational analysis, a system
5 where it's working well. Where it's not working well.
6 Where the ridership is growing or it's not growing.
7 Identifying areas that could be addressed that would
8 result (indiscernible) performance. So, we kind of
9 come at it from both ends of the spectrum.

10 What we don't do as a Program is somehow tie
11 discretionary funding to performance. We don't
12 necessarily have our penalties that, you know, are
13 levied on someone if their performance goes down. It's
14 all kind of relative to what others are doing. So, I
15 think we stopped short of a more prescriptive approach
16 to performance as a Program. I'll just kind of throw
17 that out there as food for thought because I think
18 anyone will tell you that if in general your
19 performance measures are trending down that as a
20 Program your ability to convince the state for example
21 that you should -- that they should invest in you, when
22 your performance measures are trending down I don't
23 think you have as strong an argument for that
24 investment then you do if you were trending up. It's
25 pretty basic stuff that way. So, I just kind of throw

1 those thoughts out. See if it generates any discussion
2 in the Committee. Whether the Committee is interested
3 in pursuing this topic (indiscernible) in some sort of
4 a more structured format. John, I'll throw it back to
5 you at this point.

6 JOHN MCBETH: I have a question. In looking
7 at the counties in orange, did -- is there a way for us
8 to take into consideration mortality?

9 JIMMY CARDENAS: Mortality rate?

10 JOHN MCBETH: Right.

11 JIMMY CARDENAS: So, in terms of the --

12 JOHN MCBETH: The mortality rate in those
13 counties. I mean we have people die all the time. I
14 mean, it's -- and I know out west, way out west, in
15 northwest you have very elderly populations. When we
16 established those systems up there long -- many, many
17 years ago, ridership was quite high but it's because of
18 their huge elderly population. I just wonder what is
19 going on with the mortality rate out there. I, you
20 know, population, we're adding population, certainly
21 adding more population than we're losing. But I know
22 coming from West Texas, I know the little town I grew
23 up in and there is nobody moving in there and there are
24 people, you know, five or six funerals a week. People
25 are just dying off, so. I just wonder is there a way

1 of looking at the mortality and seeing, even if it's a
2 small percentage, say it accounts for 2, 2 ½, 3% that
3 cuts -- that cuts down that big percentage loss even if
4 we go from not 18 but let's say they go down, you know,
5 maybe 12 and that's a lot easier to explain to elected
6 officials than a bunch of other stuff. So, I just
7 wonder if there's a way of looking -- just get a broad
8 thing. What's the mortality rate in those counties. I
9 would think we would be able to look at the mortality
10 rate and see how many people we're losing.

11 ERIC GLEASON: So, John, this is Eric. Let
12 me --

13 JOHN MCBETH: Yeah.

14 ERIC GLEASON: -- let me just (indiscernible)
15 a little further. So, we are able to track population
16 changes.

17 JOHN MCBETH: Correct.

18 ERIC GLEASON: Which that is a part of but
19 you --

20 JOHN MCBETH: Yeah, mortality would be a part
21 of the population change, that's correct.

22 ERIC GLEASON: Right. But what you're
23 talking more specifically it's a customer base.

24 JOHN MCBETH: Correct. And that's --

25 ERIC GLEASON: Okay.

1 JOHN MCBETH: -- our customer base is always
2 -- yeah, it's always been -- I've been doing this since
3 1982, it has always skewed toward the elderly. Because
4 they don't -- they -- most of them can't drive or they
5 can't afford the insurance or their kids took their car
6 away or TxDOT took their car -- or motor vehicles took
7 their driver's license away, thank God. So yeah, it's
8 that group, not just the population but that specific
9 group that we've always classically served.

10 We look at that. We look at -- we do surveys
11 through our dispatch operation, basically demographic
12 surveys to see where were -- if we're skewing one way
13 or the other. But I do know that we have lost elderly
14 ridership. Now we've replaced it with other ridership,
15 but I do know we've lost it. We've lost some, not all,
16 but we've lost some and I would think that would be
17 exacerbated in far West Texas.

18 ERIC GLEASON: So as a part of your overall
19 customer base, the share of it that is elderly has --

20 JOHN MCBETH: Right.

21 ERIC GLEASON: -- decreased. Interesting.

22 JOHN MCBETH: I think it has decreased. I
23 just have that feeling the elderly shared ridership has
24 decreased. Now we see increases in certain counties.
25 Polk county over in (indiscernible), Texas is a good

1 example. They've got -- they've got an R.V. park over
2 there that is bigger than most cities. I mean, that
3 R.V. parks got, you know, I think you counted those
4 people as citizens of the community, they have 65,000
5 people living there but they're only living there three
6 or four months a year.

7 ERIC GLEASON: Yeah.

8 JOHN MCBETH: Bird watchers are 26,000 of
9 them. So we've gained population there and those
10 people, you know, they bring their R.V. in, they park
11 it and then they call us. And we see spikes depending
12 upon when all those people migrate down from the
13 northeast down to Texas to, you know, either, you know,
14 go fishing. Or, you know, go look at birds or -- I had
15 no idea birding was that big of a deal but it sure is.
16 So, we gain elderly ridership there because once they
17 park their car, they just assume use us. And they're
18 coming from the northeast where public transportation
19 is something they use all the time.

20 ERIC GLEASON: Right. The other trend that
21 I'm aware of that has been communicated to me is that
22 particularly in areas like West Texas demographically
23 that the -- as populations generally decline that the
24 remaining population has a higher level of
25 characteristics associated with it. Which are more

1 like the traditional ridership of the rural transit
2 system.

3 JOHN MCBETH: Uh-huh. Yeah.

4 ERIC GLEASON: So, yes, I think probably
5 knowing more specifically about that, even at the
6 county level, is probably --

7 JOHN MCBETH: Yeah.

8 ERIC GLEASON: -- an important of this, yeah.

9 JOHN MCBETH: I would love to see those
10 numbers. I mean, I just -- I mean I know from the
11 little town I come from Snyder, Texas, my older sister
12 and brother in law moved back from, you know, Manassas,
13 down to Snyder to retire and, you know, they're pretty
14 conservative people and they were pretty well off and
15 they probably never even thought about using public
16 transportation but I know my older sister is five years
17 older than me, she can drive and she do all the stuff
18 but she depends upon the rural transit system out there
19 to get her to and from where she goes. I mean, being
20 proud to admit that is just is pretty amazing, but no
21 she really actually does depend upon it. So, you know
22 we added at least one elderly person, but I know at the
23 same time I read obituaries and I see how many are
24 going away. And I know a lot of them probably use
25 rural public transit. I'm just interested in that

1 number. I just -- as a subset of the population
2 number. I know it was it was included in the
3 population number, but. It's hard to replace dead
4 people, I think.

5 JIMMY CARDENAS: I think, John, this is
6 Jimmy.

7 JOHN MCBETH: Yeah.

8 JIMMY CARDENAS: The easiest way would be
9 probably the Census has estimates on by age
10 stratification, right.

11 JOHN MCBETH: Uh-huh.

12 JIMMY CARDENAS: (Indiscernible) by an over -
13 - that population changes per year. That's probably
14 the easiest way to capture that number.

15 JOHN MCBETH: Yeah, I would think so.

16 JIMMY CARDENAS: Mortality --

17 JOHN MCBETH: I wouldn't spend a lot of time
18 doing it. I would just be interested in the number
19 because it's another explanation as to why we're seeing
20 this downward drift. And it may be a very small
21 percentage but it's still a percentage. And it's an
22 irreplaceable percentage that's the other issue. If
23 people are not moving into Amarillo, then -- and people
24 are dying then it's not -- they're not replaceable.
25 And the people moving in are probably younger instead

1 of being older and so they're not going to be your
2 classical transit riders. Even though we find
3 ourselves, right now my marketing V.P. she's spending a
4 tremendous amount of time marketing to the younger
5 generation. When I say "younger" I'm talking about,
6 you know, people from 21 to 35 who, you know, they're
7 beginning to make up quite a large amount of our
8 ridership. They have a different perspective on car
9 ownership. I mean I've got two sons that are in that
10 group and they wouldn't even think about owning a car.
11 It's just not something that ever crossed their mind.
12 And they don't drive. They use public transit to get
13 where they're going.

14 But no, I'd agree --

15 JIMMY CARDENAS: Inaudible) --

16 JOHN MCBETH: -- I'd like to -- I think the
17 number would be a useful number for us. It'd be useful
18 to explore just to see if that's got something to do
19 with it.

20 ERIC GLEASON: Okay. We can take a look at
21 that.

22 JOHN MCBETH: That'd be great. Any other
23 questions or comments?

24 J.R. SALAZAR: Hey John, this is J.R.

25 JOHN MCBETH: Yes J.R.

1 J.R. SALAZAR: I have a -- just a comment
2 Eric, you can probably help. You know, we talk about
3 the 5310 Program and I don't know what year it was that
4 we made the change from, and I was thinking of the
5 wording, I don't know if it was called Traditional
6 Providers, but when we moved from rural transit
7 gestures from getting the money from the 5310 Program
8 to other people getting the money, I don't remember
9 what year that was, Eric.

10 ERIC GLEASON: No, I think that's probably
11 consistent with a change at the federal authorization
12 level in the Program description at the federal level.
13 And I'm thinking that that was possibly MAP21, although
14 I'm not sure. Which would have been in the '13 and '14
15 timeframe is when we -- well that's when -- that's when
16 the federal language would've changed. It would've been
17 several years after that before the rules were
18 published. So, if you're recalling something in the
19 '16/'17 timeframe I'm thinking it's as a result of
20 changes that occurred at the federal level in '13 and
21 '14 and are carried throughout the current
22 authorization as well.

23 J.R. SALAZAR: And I believe TTI did some
24 work for us and it showed a decrease in that program as
25 far as ridership earned a significant decrease.

1 ERIC GLEASON: Yeah, it's a little hard to
2 track. I mean, that's the other thing that some of the
3 more targeted Programs are just hard to track. And
4 we're not always 100% confident that those rural
5 transit districts that may continue to get some of
6 these funds, that they are universally separating them
7 out from the general program ridership either. So,
8 it's a little (indiscernible). As anything does, it
9 bears closer in also QC --

10 J.R. SALAZAR: Sure.

11 ERIC GLEASON: -- whether or not and if so
12 what has changed about those -- about the ridership in
13 that specific program. Because we're also, you know,
14 that was one that was on the receiving end of
15 (indiscernible), 5317 when it was consolidated. That,
16 you know, when they did that consolidation, they put in
17 place specific allocations that allocated a larger
18 share of 5310 to the metropolitan areas.

19 JOHN MCBETH: Yeah. I was going to bring
20 that up. This is John. I was going bring that.

21 ERIC GLEASON: Cause that's the other thing
22 that happened, J.R. in this time frame where as we used
23 to have a statewide program where we were managing the
24 Program for all areas of the states and then I think it
25 was MAP21 where -- that what they did at the federal

1 level is they carved off 60% of the program and
2 allocated it to the metropolitan -- to the large
3 urbanized areas directly where they became their own
4 recipients of the money rather than it being -- so it
5 went from a statewide program to an area -- to Program
6 in areas of the state of under 200,000. And they even
7 went one step further and really created some firewalls
8 between these areas on transferring money downward.
9 Easy to transfer money from rural to urban and up but
10 you can't go from urban to rural. And when they put
11 these percentages in place what they did -- it was like
12 a -- there was a disconnect because they gave the
13 single largest share of the Program to the areas in the
14 country that have the largest existing infrastructure
15 of transit services for this population. And they took
16 away funding available to the areas, like the rural
17 areas with the least amount of service infrastructure
18 in place to address this target population need. And
19 so, it was really kind of a double whammy when they
20 made those changes.

21 JIM CLINE: Hey John, this is Jim, I had a
22 quick question.

23 JOHN MCBETH: Sure.

24 JIM CLINE: I'm looking at slides 14 and 15
25 and Jimmy, just kind of big picture when we're telling

1 the story that if you had shown the data from '14 to
2 '19 and it went from 4, oh gosh, I'm looking at the
3 numbers here real quick. It went from 4.92 to 4.72, if
4 it was scaled, if the, you know, if that was what the
5 part of the chart we were showing and we scaled to zero
6 to 5 million, you know, we've -- you kind of looking at
7 it, you probably say that's kind of flat. And so it's
8 interesting of how story gets told and so I just, Eric,
9 I throw that out as a, you know, for when we start
10 thinking about the consumption by the TTC and the
11 broader perspective you get to a little different
12 clusion kind of based on where you land on the data and
13 what the scale of the graphs, stuff like that.

14 So, I just throw that out there as a thought
15 that in terms of presentation and you know, how this
16 comes together, you know, that number would be instead
17 of 6% would be 4% something like that. And it would
18 look kind of flat. Anyway, just a food -- some food
19 for thought as you proceed forward with this.

20 ERIC GLEASON: Yes, and you're exactly right
21 Jim. It depends on, you know, where you -- where you
22 window with your analysis, what you show, what you
23 choose to show and of course as Jimmy mentioned, you
24 know, next year's, or this year's performance data
25 we'll have to throw out and hard to know about fiscal

1 year '21 and, you know, the longer term impacts of the
2 pandemic as well, so, you know, it's gonna be difficult
3 moving forward to understand what's going on. So, you
4 know, I think -- and that has ramifications for next
5 year's formula allocations because, you know, we
6 typically work with the previous year performance data
7 for to do the current year allocation and, you know, I
8 for one certainly don't want to rely on the FY20 data
9 to make that decision on FY21 funding. I don't think
10 anybody does. And so on -- and I don't know for how
11 long we might need to keep choosing to use 2019 data.
12 You know, how long is it going to be until we feel as
13 though (indiscernible) performance data is back where
14 it should be. I don't know the answer to that. I
15 don't think anybody does.

16 JOHN MCBETH: A long way off. This is John.
17 A long way off.

18 ERIC GLEASON: Yes.

19 JOHN MCBETH: 2019 data is abysmal. We've
20 got a reason for that. We know that. Yeah, it's
21 abysmal. Okey doke, are there any other questions?
22 Well hearing none, Josh, during these discussions have
23 we received any request or public comment?

24 JOSH RIBAKOVE: Yes. We have two questions
25 and the first is from, hang on. I got it written down

1 right down, the first is from Ellen Smith who is the
2 new Director at Sun Metro in El Paso and she might have
3 missed it. She wants to know what happened in
4 Galveston that skewed the numbers.

5 ERIC GLEASON: Hi Ellen, this is Eric. So
6 yeah, so what happened in Galveston was Hurricane Ike
7 in 2008. That resulted in a loss of population for
8 Galveston when they went from being an urban area of
9 over 50,000 in the 2000 Census, they went from that to
10 that being below 50,000 and what we classified as a
11 Rural Program area. And then -- and so they're 2000 --
12 so our 2014 data would show Galveston rural area
13 ridership as part of our overall total.

14 The challenge becomes then in 2017 or '18
15 when they managed to secure an exemption to that
16 classification, in, I think it was 2018 Appropriations
17 and so -- and they got re-designated as an urban area.
18 So literally their ridership then went from rural to
19 being counted in the 2018 (inaudible). So that's why
20 we just remove them entirely from the calculation.
21 Does that help?

22 ELLEN SMITH: Yes, thanks.

23 ERIC GLEASON: Okay.

24 JOSH RIBAKOVE: And the second question --
25 pardon me, Ellen if you'd like to as a follow-up, your

1 mic is open now.

2 ELLEN SMITH: Can you hear me?

3 JOSH RIBAKOVE: Yes.

4 JOHN MCBETH: Yes ma'am, we can.

5 ELLEN SMITH: Oh wow, I was wondering how I
6 could talk. Yeah, no, so thank you for inviting me to
7 the meeting. It's been very interesting. The one
8 question that I had was on the national highlights you
9 had said that the low fares contribute to the
10 ridership. How low are the fares? Have we ever done a
11 study across the state of Texas on what various transit
12 authority's charge?

13 JIMMY CARDENAS: Not recently to -- so I can
14 answer to the Literature Review is essentially showing
15 case study examples, right, that there's a linear or
16 there's a relationship between lower fare and higher
17 ridership on the Regression Analysis for several
18 studies but yeah, I'll throw it back to Eric. I'm not
19 aware of any state, at least recent statewide fare
20 analysis for each transit district.

21 ERIC GLEASON: No. We don't -- I'm not aware
22 of that either, Ellen. It's not something that I think
23 we've done. And I don't think it -- so -- and even in
24 the annual statistics reporting we don't report on
25 fares as much we do on fare revenue and --

1 JOHN MCBETH: Yeah.

2 ERIC GLEASON: -- you know, a (indiscernible)
3 tech stuff.

4 ELLEN SMITH: Okay. Well the only reason I
5 was asking was on that slide about national highlights
6 that --

7 ERIC GLEASON: (Inaudible) --

8 ELLEN SMITH: -- more service days, lower
9 fares, shorter reservations; I just wondered, you know,
10 here in El Paso for the fixed bus route our fare is
11 \$1.50, that's the full (indiscernible) and then we have
12 a million discounts all the way down to \$.30 for some
13 of the seniors.

14 ERIC GLEASON: Right.

15 ELLEN SMITH: And we still don't have the
16 ridership but oh well.

17 ERIC GLEASON: Yeah, that's always
18 complicated by the specifics of the policies in place
19 in any individual agency just as you suggested. So,
20 it's really hard to draw overall conclusions. And you
21 know fares in the Rural Program which is what we were
22 focused mostly about here today, fares in the Rural
23 Program just, you know, are not and never have been an
24 overarching objection of the Program to begin with.
25 And (indiscernible) are important but I think most

1 policy boards have recognized that the customer base
2 has not necessarily -- does not have the income to
3 support a large fare that would contribute a greyer
4 amount towards the overall expense of the trips.

5 ELLEN SMITH: Right. Thank you.

6 ERIC GLEASON: Uh-huh.

7 JOHN MCBETH: Yeah, this is John, I mean we
8 struggle -- my board, we struggle with fares all the
9 time. You know, from the logical point of view it's
10 counterintuitive that in a Rural Program all things
11 being equal you should charge, you know, by the
12 distance cause rural is driven by distance. Your costs
13 are driven by distance but if you charge by distance,
14 you're not gonna have anybody riding because nobody
15 could afford it. So, you know, whereas the fare in
16 Bryan College Station is \$1.00 for a fixed route
17 system, it's pretty much the same thing in a Rural
18 Program for demand response program for a trip that
19 travels 65 miles. I mean, if you charge what it cost
20 by distance, you wouldn't have any riders. No one
21 could afford it.

22 I wonder, you know, I have one other question
23 going back to TTI Report, did y'all look at -- I know
24 you looked at delivery, which I think is a big, big
25 deal. I think Amazon alone makes a big dent. Did you

1 look at Uber and Lyft to determine if they are actually
2 taking over a portion of the ridership in the rural
3 program? I know they are in my more urban rural areas
4 like Lufkin, Nacogdoches. I don't think so much in my
5 real rural ones, but I just wonder if y'all looked at
6 that.

7 JIMMY CARDENAS: Sure, John. This is Jimmy.
8 So actually, that's a good example in Lufkin and
9 Nacogdoches, your more urban areas. Those still fall
10 in the rural category, right. However --

11 JOHN MCBETH: Right, they do. They're Rural
12 Programs but I do know they've got a whole lot of --
13 they've got a lot of Uber and a whole lot of Lyft.

14 JIMMY CARDENAS: So, in our scan at the
15 statewide level, those two examples Nacogdoches and
16 Lufkin, were one of the only ones that had such a big
17 presence in the rural areas. So --

18 JOHN MCBETH: Yeah.

19 JIMMY CARDENAS: -- a lot of -- you're correct
20 in the urban areas, yes, there's a significance
21 presence growing since 2014 for these T&C's,
22 particularly Uber and Lyft but aside from those two
23 examples, we did not find a very significant presence
24 in the rural -- of the other rural programs.

25 JOHN MCBETH: Yeah. I would think not.

1 Okay, Josh what was our second question? Second public
2 comment.

3 JOSH RIBAKOVE: John, our second question
4 came from Jane Westfall who is no longer on the call
5 but she did ask about -- really for Jimmy Cardenas, was
6 wondering if TTI was open to riders?

7 JIMMY CARDENAS: Josh, (inaudible) repeat --

8 JOSH RIBAKOVE: Say it again?

9 JIMMY CARDENAS: Would you repeat the
10 question, Josh?

11 JOSH RIBAKOVE: Yes. Jane Westfall asks did
12 you talk to riders.

13 JIMMY CARDENAS: Not for this project. We
14 didn't do a rider survey or -- the only perspective we
15 got was from the transit agencies so in short this
16 project didn't include our statewide rider survey.
17 There was a -- we did use data from a 2017 rider survey
18 generally just to show the trip distributions but we
19 didn't update that for this research.

20 JOSH RIBAKOVE: Thanks. I've got her email
21 and I'll let her know.

22 JOHN MCBETH: Great. Okay, that's end of
23 Public Comments. For Item Number 7 is propose and
24 discuss Agenda items for the next meeting and confirm
25 the date. Let's go with the easy one first. Let's

1 confirm the date. Josh? Josh, are you there?

2 JOSH RIBAKOVE: Sorry, I was muted. The next
3 date would be the last Tuesday in October which is --

4 JOHN MCBETH: Halloween -- no.

5 JOSH RIBAKOVE: -- the 27th -- actually
6 Tuesday, October 27th.

7 JOHN MCBETH: 27th?

8 JOSH RIBAKOVE: Yes.

9 JOHN MCBETH: Does anybody have a problem
10 with that date?

11 UNKNOWN MALE: No.

12 UNKNOWN MALE: No, it works for me.

13 JOHN MCBETH: It works for me. Ten o'clock,
14 Josh?

15 JOSH RIBAKOVE: That's our standard, yes.

16 JOHN MCBETH: Okay. So, there will be no
17 objection the next meeting. PTAC will be October the
18 27th at 10 o'clock and hopefully by then we will be
19 able to meet as a group but who knows. It might not
20 occur until 2021. And as far as Items on the Agenda,
21 Eric I'm sure y'all have some items you'd like to have
22 on the Agenda.

23 ERIC GLEASON: So I think at this point -- at
24 that point in time, you know, I think whatever needs to
25 happen between now and then State appropriations,

1 levels and (indiscernible) maybe we'll have some
2 clarity there. I think that we will, if I have the
3 schedule correctly, we'll be -- we could have an Inner
4 City Bus Consultant selected by then.

5 JOHN MCBETH: Oh, that'd be great.

6 ERIC GLEASON: It might be close. If we've
7 done that then we can certainly refresh the Committee
8 on that Study and introduce the consultant team to the
9 Committee. Probably an update on CARES Act funding at
10 that point would be appropriate.

11 JOHN MCBETH: Okay.

12 ERIC GLEASON: And so, we'll come up with a
13 list of ideas to go over with you, John as that date
14 approaches.

15 JOHN MCBETH: Great. Okay. That takes care
16 of Item Number 7 and Item Number 8 is always the final
17 one which adjourn. I will take a motion to adjourn
18 from Jim and a second from J.R.

19 JIM CLINE: This is Jim, so moved.

20 J.R. SALAZAR: This is J.R., I second.

21 JOHN MCBETH: With a motion and a second, any
22 discussion? Hearing none, we'll call a vote. All in
23 favor signify by saying aye.

24 ("Aye" stated in unison.)

25 JOHN MCBETH: All others nay. Hearing no

1 nays and all ayes, we are officially adjourned. Thanks
2 everybody for the meeting.

(END OF PROCEEDINGS.)

1 CERTIFICATION PAGE OF AUDIO RECORDING

2

3 I, Angelica Mathews, hereby certify that the
4 foregoing is a correct transcription from the audio file
5 of the proceedings in the above-entitled matter.

6

7 Please take note that I was not personally
8 present for said recording and, therefore, due to the
9 quality of the audio file provided, inaudibles may have
10 created inaccuracies in the transcription of said
11 recording.

12

13 I further certify that I am neither counsel
14 for, related to, nor employed by any of the parties to
15 the action in which this proceeding was taken, and
16 further, that I am not financially or otherwise
17 interested in the outcome of the action.

18

19 I further certify that the transcription fee
20 of \$_____ was paid/will be paid in full by Texas
21 Department of Transportation, Austin, Texas.
