

TEXAS TRUNK SYSTEM PHASE 1 CORRIDORS

The Texas Highway Trunk System is a network of rural highways to:

- Improve rural mobility,
- Connect major activity centers,
- Provide access to ports of entry into Texas, and
- Connect with principal highways from adjacent states.

Phase 1 Corridors were identified by the Texas Transportation Commission in 1998 as priority corridors for allocation of construction funds for expanding two lane Trunk System highways to a four-lane divided highway.
